<b>-7209</b>	The current Windows Installer package name includes Unicode characters that may cause a run-time error if a compressed Network Image Setup.exe is built.	<p>This build warning occurs if the following conditions are true:</p> <ul style="list-style-type: none"> <li>For the name of the .msi package, you include Unicode characters that are not supported by your build machine's ANSI code page.</li> <li>You include a setup launcher (Setup.exe file) with your release.</li> </ul> <p>This warning occurs to inform you that when the Windows Installer package is extracted from Setup.exe to a temporary location on the target system, run-time error 1152 may occur.</p> <p>To resolve this warning, change the name of the .msi package so that it does not contain Unicode characters that are not supported by your machine's ANSI code page. To do so, you can use the MSI Package File Name setting on the General tab for a product configuration in the Releases view.</p>

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7208</b>	The current location for this package includes Unicode characters that may cause a run-time error when Windows Installer tries to extract its .cab files.	<p>This warning occurs if the following conditions are true:</p> <ul style="list-style-type: none"> <li>• The path for the release that InstallShield is building contains Unicode characters that are not supported by your build machine's ANSI code page.</li> <li>• You configure the release so that your product's program files are compressed into .cab files.</li> </ul> <p>You can ignore this warning if end users will launch your release from a location whose path does not contain Unicode characters that are not supported by your build machine's ANSI code page.</p> <p>If end users try to launch your installation from a path that contains Unicode characters that are not supported by the target system's ANSI code page, run-time error 1311 occurs when Windows Installer tries to extract the .cab files.</p>
<b>-7207</b>	A package cannot contain both the MsiLockPermissionsEx and LockPermissions tables.	<p>An installation should not contain both the MsiLockPermissionsEx table and the LockPermissions table. If you use the Permissions setting for a service, and the settings under it, you are configuring the MsiLockPermissionsEx table of the package. If Traditional Windows Installer handling is selected for the Locked-Down Permissions setting in the General Information view and you have set permissions for one or more files, folders, or registry keys in your project, you are configuring the LockPermissions table of the package.</p> <p>For more information, see <a href="#">Securing Files, Folders, Registry Keys, and Windows Services in a Locked-Down Environment</a>.</p>
<b>-7201</b>	The language '%1' is missing from this project but included in this release.	<p>This build warning occurs if a language is selected in the UI Languages setting on the Build tab in the Releases view, but it is not also selected in the Setup Languages setting in the General Information view.</p> <p>This build warning is alerting you that the release will not include the specified run-time language. If you do not want to include the specified run-time language in your release, you can ignore this warning.</p> <p>If you do want to include the specified run-time language in your release, add the language to the Setup Languages setting.</p>

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7187</b>	The Find What setting for the %1 text change is not configured. This text change will not be performed.	<p>You have added a change item to a change set in the Text File Changes view; however, the value for the Find What setting is blank. This setting must have a value; otherwise, the text file changes are not made at run time.</p> <p>For more information, see <a href="#">Specifying a Change for a Text File</a>.</p>
<b>-7186</b>	The Include Files setting for the %1 text change set is not configured. None of the text changes associated with this text change set will be performed.	<p>You have added a change set in the Text File Changes view; however, the value for the Include Files setting is blank. This setting must have a value; otherwise, the text file changes are not made at run time.</p> <p>For more information, see <a href="#">Creating a Text Change Set</a>.</p>
<b>-7185</b>	The %1 translation for string identifier %2 includes characters that are not available on code page %3.	<p>This error occurs if both of the following conditions are true:</p> <ul style="list-style-type: none"> <li>• The string identifier value that you entered for the specified language contains characters that are not available in that language's code page.</li> <li>• You are building a language-specific (ANSI) database.</li> </ul> <p>To resolve this error, consider using the String Editor view to edit the value of the string identifier so that it uses characters from the appropriate code page.</p> <p>If you must use characters that are not available in the target language's code page, consider selecting Yes for the Build UTF-8 Database setting. Note, however, that this may result in user interface issues in some scenarios because the Windows Installer does not fully support UTF-8 databases. For more information, see the description of the <a href="#">Build UTF-8 Database setting</a>.</p>

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7184</b>	The %1 column of the %2 table includes characters that are not available on code page %3: "%4"	<p>This error occurs if both of the following conditions are true:</p> <ul style="list-style-type: none"> <li>• A table in the source project database contains characters that are not available in the code page for one or more target languages.</li> <li>• You are building a language-specific (ANSI) database.</li> </ul> <p>To resolve this error, consider changing the data that is described in the error message so that it uses characters from the appropriate code page. For example, if the error message mentions the Shortcut table, consider changing the string in the Shortcuts view.</p> <p>If you must use characters that are not available in the target language's code page, consider selecting Yes for the Build UTF-8 Database setting. Note, however, that this may result in user interface issues in some scenarios because the Windows Installer does not fully support UTF-8 databases. For more information, see the description of the <a href="#">Build UTF-8 Database setting</a>.</p>
<b>-7174</b>	"%1" contains a reference to a string table entry '%2' that is not included in the project's string table.	<p>In this warning message, %1 indicates the fully qualified path to an InstallScript file (.rul) in the project, and %2 indicates the string ID that is used in that .rul file but is not listed as one of the project's string entries.</p> <p>InstallShield displays this warning at build time for each string identifier that is found in the project's InstallScript file but not in the String Editor view.</p> <p>To see the line in the InstallScript code that has the string identifier, double-click the warning message that is displayed on the Tasks tab of the Output window at build time. The string identifier is preceded by the string constant operator (@).</p> <p>To resolve this build issue, ensure that the string identifier is defined in the String Editor view. In addition, ensure that the spelling of the string identifier in the InstallScript code matches that in the String Editor view.</p>

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7143</b>	Component %1 installs to a 64-bit folder but is not marked as a 64-bit component. This may result in an incorrect installation path for this component's files.	<p>If a component is not configured to be 64 bit, Windows Installer may not install the component's files to the appropriate 64-bit location.</p> <p>To specify that a component is 64 bit, select Yes for the component's 64-Bit Component setting.</p> <p>For more information about the 64-Bit Component setting, as well as additional component settings, see <a href="#">Component Settings</a>.</p>
<b>-7138</b>	The Msi Command Line of the release currently being built contains REINSTALLMODE. The parameter appears to have the 'a' option which will force all files to be reinstalled, regardless of checksum or version.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7137</b>	The %1 file that you selected for the Help File Path setting in the Custom Actions view for the %2 custom action does not contain any text.	<p>Create a file that describes the intended behavior of the custom action that is mentioned in the warning. The file should be a text-based file such as a .txt, .htm, or .rtf file. Then in the Custom Actions and Sequences view (or the Custom Actions view), select the custom action and select the file that you created for the Help File Path setting.</p> <p>To learn more, see <a href="#">Documenting the Behavior of Custom Actions</a>.</p>
<b>-7135</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7128</b>	Error embedding setup.exe.manifest.	<p>This error occurs if there is a problem embedding the application manifest in the Setup.exe launcher. The application manifest specifies the minimum privilege level required by your installation's Setup.exe file for running the installation (the setup launcher, any InstallShield prerequisites, and the .msi file) on Windows Vista and later platforms.</p> <p>This error may occur if the template manifest file is missing from the InstallShield Support folder. It also may occur if the Setup.exe template is missing from the InstallShield Redist\Language Independent\i386 folder.</p> <p>To resolve this error, try running a repair of InstallShield.</p>

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7125</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7124</b>	Could not invoke MSBuild. Make sure that the .NET Framework %1 is installed at '%2' on the system. If you are running InstallShield from within Visual Studio, you must use Visual Studio 2005 or later.	If you use MSBuild to build Visual Studio solutions with InstallShield projects, you must have .NET Framework 3.5 or later on your machine. In addition, you must be using Visual Studio 2005 or later.
<b>-7123</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7122</b>	Error writing information to the source file for %1. Verify that the file is writeable, and/or that the file ITemplate.manifest is not read only.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7121</b>	The manifest file %1 does not contain COM information in at least one file element. Please ensure that all COM modules associated with the manifest are self-registering and verify that the self-registration process does not fail for each COM module.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7120</b>	Error building table %1	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7119</b>	Could not locate a key file for component %1. Advertised shortcut %2 points to the key file of this component.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7118</b>	The InstallScript Custom Action %1 cannot be sequenced in InstallUISequence for an InstallScript MSI project.	<p>The User Interface sequence does not run in InstallScript MSI installations; the event-driven InstallScript code handles the user interface. To resolve this issue, do one of the following:</p> <ul style="list-style-type: none"> <li>● Schedule the InstallScript custom action for the Execute sequence.</li> <li>● Use InstallScript event-driven code instead of an InstallScript custom action.</li> </ul>
<b>-7117</b>	Custom Action %1 called from Standard dll and stored in Binary table cannot have deferred/rollback/commit execution.	<p>This error occurs if you try to call a deferred-, rollback-, or commit-execution custom action using a standard .dll. When you call a non-Windows Installer .dll (that is, one that does not have the MyFunc(MSIHANDLE) entry point), InstallShield does the following:</p> <ul style="list-style-type: none"> <li>● InstallShield creates a wrapper .dll with the standard Windows Installer entry point.</li> <li>● InstallShield stores your .dll plus the InstallShield wrapper .dll in the Binary table.</li> </ul> <p>When the custom action is called, Windows Installer calls the InstallShield wrapper .dll. This, in turn, extracts your .dll from the Binary table and calls the function that you specified. However, the InstallShield wrapper .dll does not have access to the Binary table during deferred, rollback, or commit custom actions, and thus it cannot extract and call into your .dll.</p> <p>To resolve this error, try one of the following options:</p> <ul style="list-style-type: none"> <li>● Create a new .dll that has a standard Windows Installer entry point and call it directly.</li> <li>● Use InstallScript code to do perform the same functionality if you do not want to write your own .dll.</li> <li>● Schedule your custom action to run in immediate mode instead of deferred, rollback, or commit mode.</li> </ul>
<b>-7116</b>	Custom Action DLL %1 not found in release.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7113</b>	Language support for %1 is not included in this edition.	This error appears if you try to enable too many languages in a project, building with more than two in a non-Premier edition. The build is successful (unless stop at first error is enabled), but the extra languages are not built. The first two qualified languages are built. %1 is replaced with the name of the language that is not included in this release. To resolve this error, use the Premier edition of InstallShield to build your release.
<b>-7108</b>	%s is too large to store in a CAB (2GB maximum).	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7107</b>	The merge module %1 silently fails to install from a compressed build. Applying compression post-build may work properly.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7104</b>	The destination of component %1 is the GlobalAssemblyCache. The component must contain a key file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7101</b>	This component %1 is shared between multiple features, which can create problems for features that are going to use MSI's Install On Demand technology.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7098</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7097</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7096</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7095</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7092</b>	Missing binary entry ISSetup.dll	<p>This error occurs if you build a project that includes an InstallScript custom action, but the InstallScript engine (ISSetup.dll) has been removed from the Binary table. To resolve this error, manually add a new entry called <b>ISSetup.dll</b> to the Binary table and browse to the following DLL:</p> <p><i>InstallShield Program Files Folder\Redist\Language Independent\i386\ISSetup.dll</i></p>
<b>-7088</b>	Failed to load %1. This file needs to be loaded in order to build the associated custom object.	Verify that the file, %1, is in the System subfolder within the InstallShield Program Files folder.
<b>-7087</b>	Custom objects cannot be included with your installation media due to an error creating the Windows Installer Object. In order to include custom objects, Windows Installer needs to be installed on the build system.	Verify that Windows Installer is installed properly on the build system.
<b>-7086</b>	The device driver installation framework is not currently available. The device driver feature will not be fully functional until an update has been provided. Please contact technical support for more details.	<p>This error occurs when you build a release for a project in which you used the Device Driver Wizard to include a device driver package with your installation. The redistributable needed to install the device driver will be available in an update to InstallShield. Instructions for obtaining the update will be posted in an article for this build error in the <a href="#">Knowledge Base</a> when the redistributable is available. To resolve the build error before you receive the redistributable, you can remove the device driver component in the Components view and then rebuild the release.</p>
<b>-7084</b>	The VBScript Custom Action %1 does not point to a valid VBS file.	This warning message is displayed if you add a VBScript custom action to your installation but the file specified for the custom action is not a VBScript file. To resolve this error, select the appropriate type of file for the specified custom action in the Custom Actions and Sequences view (or the Custom Actions view).
<b>-7083</b>	Script '%s' is not associated with any connection.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7082</b>	An error occurred while generating your Sql Script.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7080</b>	An error occurred while testing the component to see if the device driver package scan at build property is set.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7079</b>	An error occurred while getting the path to the device driver package.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7078</b>	Unable to scan device driver package %1. The file is missing.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7077</b>	An error occurred while scanning a device driver package.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7065</b>	The MSI 3.1 Engine could not be found. You can download this using the Redistributable Downloader under the Tools menu, if it has been made available by Microsoft. We have included the 3.0 Engine in your built installation.	<p>This message is displayed as a build error if version 3.1 of the Windows Installer engine was selected to be included but it was not found on the build machine.</p> <p>This message is displayed as a build warning if the version 3.1 or 2.0 best-fit option was selected but version 3.1 of the Windows Installer engine was not found on the build machine.</p>
<b>-7064</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7063</b>	The File %1 in Component %2 is being installed to the Windows Fonts folder, but there is no corresponding record in the Font table. The Font will not be registered properly on the target system.	To resolve this warning, open the Files and Folders view and remove the font mentioned in the message. Then re-add the font to the Fonts folder; InstallShield adds the corresponding record to the Font table automatically.

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7062</b>	Refreshing the COM+ settings from the client machine. An error occurred while refreshing the COM+ settings from the client machine.	This build error occurs when an exception error has occurred with a COM+ application that is selected in the Component Services view. An option is provided to refresh the COM+ settings during the build process, and build error -7062 occurs when this option is selected and the refreshing process has failed. To resolve this error, you can open the Component Services view, select the COM+ application, and clear the Refresh the COM+ settings from the client machine at build check box on the Installation tab.
<b>-7061</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7060</b>	Due to licensing requirements, InstallShield requires that you provide the MSI 3.0 engine redistributable from the MSI 3.0 Beta. Please copy instmsi.exe from the MSI 3.0 Beta folder to \redist\Language Independent\i386\MSI3.0\instmsiw.exe.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7059</b>	Unable to update the latest patch version property. As a result, future patches built from this project may not be sequenced properly. Make sure the project is not marked as read-only.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7058</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7036</b>	An error occurred while loading the primary application assembly.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7025</b>	The COM+ component server file '%1' cannot be found on your system. The component '%2' will not be installed on the target system. You will need to install the component manually after your COM+ application is installed.	%1 refers to the COM+ DLL that is missing, and %2 refers to the ProgID. To resolve this warning, add the DLL to your system in the appropriate location, or remove the COM+ component from your project.
<b>-7024</b>	To include J# in the build you must also include .NET.	<p>J# requires the .NET Framework Redistributable Package, but it is not included in the installation. If you are sure that your end users already have the .NET Framework on their systems, you can ignore this warning message. However, if there is a chance that they will not have the .NET Framework, add it to your installation. If the .NET Framework is not on their systems, they might have trouble installing J# as part of your installation.</p> <p>For more information, see <a href="#">Adding .NET Framework Redistributables to Projects</a>.</p>
<b>-7023</b>	Internal build error.	This error occurs if a merge module such as MFC 7.1 is not configured correctly or it is corrupted. If you have more than one merge module in your project but you do not know which one is causing the error, you need to first identify the problematic merge module. You can do this by removing a merge module from your project and then building your release. If the error recurs, you have identified the problematic merge module. If not, remove a different merge module and then build. Once you have identified the merge module causing the error, try reinstalling it. If that does not resolve the error, contact the author to obtain the latest version.
<b>-7015</b>	Error copying setup.inx to media folder. Unexpected error.	This error occurs if Setup.inx, the compiled script file, cannot be copied to the Media folder located in the \Media\Disk Images\Disk 1 folder. This can occur if you are out of disk space or the file is locked.
<b>-7014</b>	Error copying setup.inx to media folder. Script is read-only.	This error occurs if Setup.inx, the compiled script file, is marked as read-only. To resolve this error, find the Setup.inx file, which is usually in the \Media\Disk Images\Disk 1 folder. Right-click this file and select Properties. Then clear the Read-only check box.

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-7012</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-7011</b>	%1 must have a strong name to be installed to the GlobalAssemblyCache.	<p>You can install an assembly to the Global Assembly Cache only if it has a strong name. A strong name contains the assembly's simple text name, version number, culture information (if available), a public key, and a digital signature. Using strong-named assemblies in the Global Assembly Cache enables you to have multiple versions of an assembly with the same name but with different versions of .dll files. The assemblies stored in the Global Assembly Cache can be shared by different applications on a computer. To resolve this error message, you have two options.</p> <ul style="list-style-type: none"> <li>• Change the target destination for the assembly to a location other than the Global Assembly Cache if sharing that assembly with other applications is not explicitly required. Note that it is not necessary to install assemblies into the Global Assembly Cache to make them accessible to COM interop.</li> <li>• Select an assembly that has a strong name for installation to the Global Assembly Cache. Note that once an assembly is created, you cannot sign it with a strong name. You can sign an assembly with a strong name only when you create it.</li> </ul>
<b>-7001</b>	During the last build, the .msi file was only partially built. In order to stream the script into the .msi file, you must have a complete .msi file. Build a complete .msi file by selecting "Build <ReleaseName>" from the Build menu.	When you cancel the build, a partially built .msi file exists. If you attempt to compile script into the partial .msi file, this error occurs. Select "Build <ReleaseName>" from the Build menu to build a complete .msi file.
<b>-6654</b>	The file %1 is not the key file of component %2. If you call a function in a standard DLL that is installed with the product and the action is scheduled as deferred, the DLL you are calling must be the component's key file.	Set the called DLL as the component's key file.

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6653</b>	The feature %1 in the installation contains more than 1600 components. There is a maximum limit of 1600 components per feature.	For more information, see <a href="#">ICE47</a> and <a href="#">FeatureComponents Table</a> .
<b>-6652</b>	Could not create _isconfig.xml for use with InstallUtilLib.dll.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6651</b>	The setup you are building contains more than 32,767 files. Automatically switching setup package to appropriate MSI schema.	<p>This warning appears if your installation package contains more than 32,767 files. InstallShield automatically applies the large package schema.</p>  <p><b>Caution</b> - There is an issue with patching if your package uses the large package schema. When you build the patch, the following error is triggered: "Can't Generate Primary Transform."</p>
<b>-6647</b>	Cannot move file from %1 to %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6646</b>	The %1 property in the merge module %2 is set to NULL. This property cannot be NULL.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6645</b>	%1 failed to load. Error: %2 Error Description: %3	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6641</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6640</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6639</b>	The merge module %1 requires one of the following merge modules also to be included in the setup: %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6638</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6637</b>	Invalid registry data for component NewComponent1 while importing <i>"C:\RegTest\SingleSlash!"=dword:2</i> (where the information in italics represents the invalid data).	The invalid data in this example is the use of a single backslash instead of two backslashes. Another example would be an entry with <i>DWORD</i> in it instead of <i>dword</i> .
<b>-6636</b>	The file key %1 and %2 are found in the File table. Despite having different cases, the identical key names will cause an unexpected result when the files are installed on the target system. This occurs because the compressed files in the cabinet file are named using the file keys. To correct this issue, change one of the file keys to be unique in the cabinet file if you are building a compressed setup or a merge module. You can change the file key name in the Direct Editor view.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6635</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6634</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6633</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6632</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6631</b>	InstallScript MSI projects do not have Multiple Instance support.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6630</b>	The property InstanceId does not appear in the Property table.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6629</b>	The value for the property InstanceId is not numeric.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6628</b>	The value for the property InstanceId is duplicated with a value in the ISProductConfigurationInstance table.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6627</b>	Component %1 has nonfile data but does not have InstanceId in its condition.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6626</b>	Could not add instance transform %1 to substorage.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6625</b>	Could not create instance transform %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6624</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6623</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6622</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6620</b>	Could not open the reference package %1 for key synchronization.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6619</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6618</b>	An error occurred while setting the key paths for dynamically created components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6617</b>	An Error occurred while adding the file '%1' to the synchronization maps.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6616</b>	An error occurred while setting the key path for component %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6615</b>	Could not update File.FileName for File %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6614</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6613</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6612</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6611</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6610</b>	An error occurred determining if the dynamically linked file %1 is a modified file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6609</b>	An error occurred determining if the dynamically linked file %1 is a new file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6608</b>	Your splash screen will not be displayed during the installation because %1 is a compressed bitmap file. To display a splash screen, you must specify a uncompressed bitmap file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6607</b>	Your splash screen will not be displayed during the installation because %1 is not a bitmap file. To display a splash screen, you must specify a valid bitmap file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6606</b>	This setup has the same package code as the setup specified by minor upgrade item '%1'. The package codes must be unique.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6605</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6604</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6603</b>	An error occurred while attempting to open the upgraded image %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6602</b>	An error occurred while attempting to close the upgraded image %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6601</b>	An error occurred while attempting to set the property %1 in the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6600</b>	An error occurred while attempting to retrieve the property %1 from the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6599</b>	An error occurred while creating the standard QuickPatch actions to the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6598</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6597</b>	An error occurred while attempting add ISQuickPatchHelper.dll to the binary table in the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6596</b>	An error occurred while attempting to sequence the action %1 in the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6595</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6594</b>	An error occurred while attempting to determine the sequence number for the base action %1 in the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6593</b>	An error occurred while initializing file class wrapper for %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6592</b>	An error occurred while attempting to determine how to process the file %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6591</b>	An error occurred while attempting to make the settings required to patch the file %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6590</b>	An error occurred while attempting to create the RemoveFile table entry for %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6589</b>	An error occurred while attempting to attach the component '%1' to its designated features.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6588</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6587</b>	An error occurred while generating a formatted file name for %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6586</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6585</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6584</b>	An error occurred while attempting to create a new component.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6583</b>	An error occurred while attempting to load the component %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6582</b>	An error occurred while saving the component %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6581</b>	An error occurred while adding component '%1' to feature %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6580</b>	An error occurred while generating a sub feature for feature %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6579</b>	An error occurred while synchronizing data in table '%1' for component %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6578</b>	An error occurred while synchronizing shortcuts from component '%1' while creating the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6577</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6576</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6575</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6574</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6573</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6572</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6571</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6570</b>	An error occurred while writing the property '%1' to the patch configuration properties file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6569</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6568</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6567</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6566</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6565</b>	An error occurred while writing the image family '%1' to the patch configuration properties file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6564</b>	An error occurred while deleting the target image '%1' from the patch configuration properties file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6563</b>	An error occurred while writing the target image '%1' to the patch configuration properties file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6562</b>	An error occurred while writing the upgraded image %1 to the patch configuration properties file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6561</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6560</b>	The stored package code of %1, does not match %2 which is in the referenced package %3. Modifying a referenced MSI package of a Quick Patch, invalidates all Quick Patches that reference that MSI package.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6558</b>	The Custom Action %1 in the InstallExecuteSequence table is run from an installed file. To run the custom action successfully, you may need to have a condition that checks if the source file is installed locally.	<p>To successfully run a custom action that is run from an installed file, you must ensure that the file is installed locally using a conditional statement:</p> <ul style="list-style-type: none"> <li>• If the custom action is sequenced before RemoveFiles—Run the action only if the component was installed locally. (?ComponentName=3)</li> <li>• If the custom action is sequenced between RemoveFiles and InstallFiles—Run the action only if the component was installed locally. Do not run the action on an uninstallation. (?ComponentName=3) AND NOT(\$ComponentName=2)</li> <li>• If the custom action is sequenced after InstallFiles—Run the action only if the component will be installed locally. (\$ComponentName=3)</li> </ul> <p></p> <p><b>Note</b> • The <i>ComponentName</i> is the component that is associated with the source file.</p>
<b>-6557</b>	Unable to find the .NET Compact Framework for the given platform/processor combination from the InstallShield Program File Folder\Support\NetCF.ini file.	Ensure that the .NET Compact Framework is in the correct location.
<b>-6556</b>	Error in including .NET Compact Framework .cab files in setup.	<p>This error might occur for the following reasons:</p> <ul style="list-style-type: none"> <li>• The .NET Compact Framework files cannot be found in the locations specified in the InstallShield Program Files Folder\Support\NetCR.ini file.</li> <li>• The CEDefault.ico file is not in the InstallShield Program File Folder\Program\04xx folder.</li> <li>• There is an error writing to the ISCEInstall table.</li> </ul>

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6555</b>	Unable to copy InstallShield Program File Folder\Support\CFAppMgr.ini file to a temporary location.	Make sure that CFAppMgr.ini file exists at the InstallShield Program Files Folder\Support folder. If this file does not exist, launch the InstallShield setup in repair mode. Remove any temporary files to create more disk space on the system.
<b>-6553</b>	Unable to find the .NET Compact Framework .cab file for the processor.	Open the InstallShield Program Files Folder\Support\NetCF.ini file and configure the .NET CF selection for this processor to resolve the issue.
<b>-6552</b>	The file key %1 of component %2 could not be synchronized with the previous package because that file key is already in use.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6551</b>	The Name and Value columns are blank in the registry record Registry1 of Component NewComponent1. The Windows Installer will set the (Default) value of <i>HKEY_LOCAL_MACHINE\New Key #1</i> to an empty string. If you would like to set the (Default) value to (Value Not Set), you need to set “Install if absent, Uninstall if present” for that key in the Registry view. If the key already exists on the Target machine, the (Default) value will not be changed.	This warning appears for every registry key you add to your project and do not manually set the default key. To set the (Default) value to (Value Not Set), you need to set “Install if absent, Uninstall if present” for that key in the Registry view.
<b>-6550</b>	%1 is not a valid .NET assembly to be installed to the Global Assembly Cache (where %1 is replaced with a full file path).	Only valid assemblies can be installed to the Global Assembly Cache. Ensure that the file selected for installation is a valid assembly.
<b>-6549</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6548</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6547</b>	The file '%1' already exists in the setup. Please modify the existing file instead of inserting a new one otherwise this file may not uninstall properly.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6546</b>	An error occurred while testing the new file '%1' for potential conflicts.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6545</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6544</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6543</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6542</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6541</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6540</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6539</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6538</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6537</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6536</b>	An error occurred opening %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6535</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6534</b>	An error occurred cloning the component %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6533</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6532</b>	An error occurred setting the updated component name for file %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6530</b>	Error processing setup [1] for Upgrade Item [2]. This does not appear to be a valid setup.	This error occurs when a minor upgrade entry exists in the Upgrades view of InstallShield, and the previous installation specified does not exist in the location indicated. See <a href="#">Knowledge Base</a> article Q108525 for resolution information.
<b>-6529</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6528</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6528</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6527</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6526</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6525</b>	The custom action %1 in the InstallExecuteSequence table is run from an installed file. It must be sequenced after the %2 action. Ensure that the custom action is sequenced properly and that the base action exists in the sequence.	This error occurs when you have authored a custom action that runs from a file that is installed during your setup. The custom action must come after the InstallFiles action in the sequence. Otherwise the file will not exist on the target system when Windows Installer runs the custom action. The only exception to this is when you run this custom action on uninstallation. In that case, the file has already been installed so the custom action does not have to occur after InstallFiles.

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6524</b>	The Custom Action %1 in the InstallExecuteSequence table is deferred and must be sequenced between %2 and %3. Ensure that the Custom Action is sequenced properly and that the base actions exist in the sequence.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6523</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6522</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6521</b>	An error occurred setting the required attribute on the feature %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6520</b>	An error occurred deleting the COM data for component %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6519</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6518</b>	An error occurred deleting the file %1 from the SelfReg table.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6517</b>	An error occurred adding the file %1 to the SelfReg table.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6506</b>	The Msi Command Line Attribute of the release currently being built is setting the REINSTALL or REINSTALLMODE parameter. This will cause your setup to always run in Resume mode.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6504</b>	The Latest Image %1 does not contain any Previous Images.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6501</b>	An error occurred building the ISDLLWrapper table. Component %1 is not found in the Component table.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6500</b>	An error occurred building the ISDLLWrapper table. The File %1 is not found in the File table.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6499</b>	The Shallow folder structure setting should not be used with multi-disk releases.	You can configure the Shallow Folder Structure setting on the Build tab of the Releases view. If error -6499 appears, select No for the Shallow Folder Structure setting so it will create a regular build folder structure.
<b>-6497</b>	Patch Creation Warning: %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6496</b>	The file hash for the unversioned file '%1' does not differ from that of the previous version. This file will not be updated.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6495</b>	The version for file '%1' only differs past the third version element. It must differ within the first three elements of the version string.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6494</b>	The new file for file '%1' has the same version as the file that exists in the setup. This file will not be updated.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6493</b>	The new file for file '%1' has a lower version than the file that exists in the setup. This file will not be updated.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6492</b>	The file '%1' has no associated feature selected. This setting is required for adding new files.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6491</b>	The new file path '%1' does not exist for file '%2'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6490</b>	Unable to set Just-In-Time compilation at install time because the Component %1 is configured to install to the Global Assembly Cache.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6489</b>	Unable to set Installer Class because the Component %1 is configured to install to the Global Assembly Cache.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6487</b>	The latest image %1 does not contain any previous images.	This error occurs if a latest image in the Patch Design view does not have at least one previous image. A latest image must have at least one previous image to create a patch.
<b>-6486</b>	The CAB files will not be digitally signed because the version of MSI.DLL is less than 2.0.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6485</b>	The MsiFileHash table will not be built because the version of MSI.DLL is less than 2.0.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6584</b>	The External File key '%1' does not exist in the Upgraded Image '%2'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6483</b>	The External File reference '%1' does not exist.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6482</b>	An error occurred while verifying an External File key.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6481</b>	The Target Image '%1' does not exist.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6480</b>	The Upgraded Image '%1' does not exist.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6479</b>	Unable to resolve target path for Directory Id '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6478</b>	FON files must have a Font Title. Font %1 in component %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6477</b>	An error occurred while adding the remove registry entry for the key '%1' and Value '%2'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6476</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6475</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6474</b>	An error occurred while processing the registry value modifications made to the project.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6473</b>	An error occurred while preparing to delete the value '%1' from the key '%2'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6472</b>	An error occurred while deleting the value '%1' from key '%2' for all features.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6471</b>	An error occurred while deleting the value '%1' from key '%2' for feature '%3'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6470</b>	An error occurred while processing the registry key modifications made to the project.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6469</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6468</b>	An error occurred while making the settings to modify the registry key '%1' to '%2' for all features.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6467</b>	An error occurred while making the settings to modify the registry key '%1' to '%2' for feature '%3'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6466</b>	Error in populating the CE setup info into the desktop setup.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6465</b>	Error in creating the CE setup media from the .inf file.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6464</b>	Error in adding CE Setup DLLs info while creating the .inf file to build CE setup media.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6463</b>	Error in adding CE registry entries.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6462</b>	Error in adding CE file associations.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6461</b>	Error in adding CE shortcuts.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6460</b>	Error in adding CE setup files.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6459</b>	Error in populating the information for the .inf file to build CE Setup media.	For additional information regarding this error, see the log file created in the following directory: <Product Config>\<Release>\CEApps\<CE Project Name>
<b>-6458</b>	An error occurred while creating an Additional File reference for the upgraded image '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6457</b>	'Ignore Missing Files' is set on the target image '%1'. This cannot be set when using the 'Include Whole Files' option on the Upgraded Image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6456</b>	An unexpected error occurred while making the settings required to include whole files in the patch.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6455</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6454</b>	Unable to create whole file patch for '%1'. An error occurred while attempting to rename the file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6453</b>	An error occurred while trying to rename the file '%1' back to its original file name '%2'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6452</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6451</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6449</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6448</b>	An error occurred while attempting to remove the file '%1' from the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6447</b>	An error occurred while deleting the file table entry for the file '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6446</b>	An error occurred while deleting the component key for the upgraded image for the file '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6445</b>	An error occurred while adding the file '%1' to the upgraded image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6444</b>	An error occurred while creating the new file entry for file key '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6443</b>	An error occurred while creating a new component for the file key '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6442</b>	Unable to create new feature off of the root feature '%1'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6441</b>	Unable to create feature component entry for feature '%1' and component '%2'.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6440</b>	Unable to find feature '%s' while creating settings for new file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6434</b>	The setup '%1' specified by ISLatestRelease was built compressed. To use this variable you must build your setup uncompressed.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6433</b>	An error occurred while setting the property %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6432</b>	An error occurred while creating the configuration data Properties.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6431</b>	An error occurred while creating configuration data for the Image Family %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6430</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6429</b>	An error occurred while creating configuration data for the Target Image %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6428</b>	An error occurred while creating configuration data for the Upgraded Image %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6427</b>	The setup referred to by , '%1', does not exist.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6426</b>	An error occurred while trying to resolve the variable .	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6425</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6424</b>	The project contains a Minor Upgrade item, however the current release does not use a setup launcher. You will have to specify the upgrade command line manually for this minor upgrade to function properly.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6423</b>	The project contains a Minor Upgrade item that references the setup %1. However, the referenced setup can only be upgraded with a Major upgrade. Please use the Major Upgrade item or the automatic upgrade item.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6422</b>	An error occurred while adding Major Upgrade settings for %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6421</b>	An error occurred determining if the setup %1 is a major upgrade.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6420</b>	The Upgrade Item setup [MSI name].msi is not found. Unable to create upgrade settings.	Ensure that the setup exists, that it is an .msi file, and that the name is correct.
<b>-6419</b>	An unexpected error occurred processing upgrade item %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6418</b>	An unexpected error occurred while processing items to be upgraded.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6415</b>	There was an error creating the patch package. Writing contents of log file '%1' to output window.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6414</b>	An error occurred populating the file hash for the unversioned file %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6413</b>	The patch creation process returned the error code %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6412</b>	An error occurred while creating the patch package.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6411</b>	An error occurred setting the file version for %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6410</b>	An error occurred while attempting to copy the file %s to the release location.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6409</b>	An error occurred while building the source path for file %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6408</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6407</b>	An error occurred setting the PackageCode into the Updated Image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6406</b>	An error occurred setting the Product Version in the updated image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6405</b>	An error occurred while preparing the Upgraded Image.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6404</b>	An error occurred preparing the Patch Configuration Properties file.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6403</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6402</b>	An error occurred while preparing the release location for building.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6401</b>	Unable to copy Original Setup file to release location.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6400</b>	Unable to copy patch configuration properties template to release location.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6309</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6308</b>	mscorlib.dll cannot be located on your system. You can set the path to mscorsn.dll using Tools   Options. The file is part of the Microsoft .NET Framework redistributable. %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6307</b>	Unable to extract one or more files to '%1'. The file path is longer than the limit set by the operating system. Change the build location of the current release to a shorter path to resolve this issue.	Change the build location of the current release to a shorter path.
<b>-6306</b>	Port number specified for configuring IIS Virtual Directories is invalid.	Make sure that the TCP port number that is specified for the virtual directory in the Internet Information Services view is valid. To learn more, see <a href="#">Configuring the TCP Port and Site Numbers</a> .
<b>-6305</b>	Could not load assembly "%1" because of : "%2".	Make sure that you are able to load the dependent file and that the assemblies are accessible according to the assembly binding rules. For more information, see "How the Runtime Locates Assemblies", available in the .NET Framework SDK help or in MSDN.
<b>-6304</b>	Error validating with CUB file "%1".	Ensure that the CUB file is valid.
<b>-6303</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6302</b>	InstallShield could not resolve Visual Studio .NET project output "%1" from component "%2". You need to build the project in Visual Studio .NET or by using the Visual Studio .NET command line: devenv /build ConfigName [/project ProjName] [/projectconfig ConfigName] SolutionName	Build the project in Microsoft Visual Studio or by using the Visual Studio command line.
<b>-6274</b>	Setup.exe is not found in the Disk1 location: %1. Please make sure that the previous full build of your release was completed if you are running the Build Tables Only.	This error occurs when the setup attempts to get the stamp from Setup.exe, but Setup.exe does not exist in the Disk1 folder. This happens when you cancel a full build in the middle of the process, and then run the Build Tables Only option.
<b>-6273</b>	A VB Script custom action exists in the project, but the VBScriptRuntime Merge Module has not been included.	Use the Redistributables view to add the VBScriptRuntime merge module to your project.
<b>-6271</b>	File %1 not found. An error occurred building the MsiFileHash table record for this file. Verify that the file exists in the specified location.	Ensure that the identified file exists in the specified location.  If the file includes the predefined path folder VSSolutionFolder, see <a href="#">Using the VSSolutionFolder Path Variable with Visual Studio Solutions</a> .
<b>-6270</b>	The record %1 in the Icon table exceeds the limit of %2 characters. As a result, the build will be unable to persist the database.	Make sure that the record is at or under the limited number of characters.
<b>-6269</b>	An error occurred copying directory %1 to %2. Please ensure that the source directory's path is correct.	Check the source directory's path.
<b>-6268</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6267</b>	An error occurred while extracting files from the cab file %1 to the location %2	Ensure that the location is accurate.
<b>-6266</b>	An error occurred while attempting to create and initialize the CAB extraction engine for %1	This error can occur when one or more files is not registered. Ensure that all files are registered.
<b>-6265</b>	An error occurred building feature '%1'. This feature has the same name (with different case) as another feature in the project. Duplicate feature names are not allowed in InstallScript MSI projects. Rename one of the features to fix this error.	Remove or rename one of the features.
<b>-6264</b>	A record in the %1 table is using string ID '%2' for column '%3' but this string is blank and the column is not nullable.	Provide a string for use in the column.
<b>-6263</b>	The number of allowed InstallScript custom actions (1000) has been exceeded. Please remove some InstallScript custom actions and rebuild the setup.	This error appears when a Basic MSI, DIM, InstallScript MSI, or Merge Module project has more than 1,000 InstallScript custom actions. Use the Custom Actions and Sequences view (or the Custom Actions view) to remove InstallScript custom actions so that your project no longer exceeds the maximum number allowed.
<b>-6262</b>	The Directory table contains the entry %1. This identifier is reserved. Defining it in the Directory table will yield unpredictable results at run time. Use the Direct Editor to rename this directory identifier.	Go to the Directory table in the Direct Editor and rename the directory identifier.
<b>-6260</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6259</b>	Certificate details are not found. The MSIX/APPX package must be digitally signed in order to be installed.	MSIX/APPX package required to be digitally signed to install the package, else installation will fail.
<b>-6258</b>	An error occurred extracting digital signature information from file "%1". Make sure the digital signature information provided in the IDE is correct.	Ensure that the digital signature information is correct. You can access the digital signature information in the Releases view or in the Release Wizard's Digital Signature panel.
<b>-6257</b>	The build engine has detected that PRODUCT_NAME has been defined in the string table. At run time, your setup will display this value as your Product Name instead of the Product Name values defined in the IDE.	This warning message occurs when the ID PRODUCT_NAME has been defined in the String Editor view. This string identifier overrides the Product Name values set in the General Information view or for the product configuration in the Releases view.
<b>-6255</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6254</b>	An error occurred building the MsiFileHash table for File %1	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6253</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6252</b>	Internal build error	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6251</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6250</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6249</b>	Component %1 is configured to install to the Global Assembly Cache but includes one or more subdirectories.	This error occurs when you are using a .NET Project Output that includes subdirectories. InstallShield does not currently support installing these files to the Global Assembly Cache. To avoid this error, change the directory for the component (for example, to INSTALLDIR), or statically add the files and configure them.

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6248</b>	Could not find dependent file %1, or one of its dependencies of component %2	Use the “Build Tables & Refresh Files” option to build the release if the release location is in <i>&lt;ISProjectDataFolder&gt;</i> or <i>&lt;ISProjectFolder&gt;</i> . For more information, see “How the Run time Locates Assemblies”, available in the .NET Framework SDK help or on MSDN.
<b>-6247</b>	The .NET Framework redistributable %1 is not found on the system. %2	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6246</b>	Could not add dotnetfx.exe to the built image. If you are including .NET 1.1, make sure a core language is selected.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6245</b>	One or more of the project's components contain .NET properties that require the .NET Framework. It is recommended that the release include the .NET Framework.	Consider adding the .NET Framework redistributable to your project. If the .NET Framework is not present on the target system at run time, the installation installs it. To learn more, see <a href="#">Adding .NET Framework Redistributables to Projects</a> .
<b>-6244</b>	One or more of the project's components contain .NET properties that require the .NET Framework. However, the .NET Framework cannot be detected. %2	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6243</b>	InstallUtilLib.dll cannot be located on your system. This file is required for Installer custom actions. You can set the path to InstallUtilLib.dll using Tools   Options. The file is part of the Microsoft .NET Framework redistributable. %1	Set the path to InstallUtilLib.dll by selecting Options from the Tools menu and clicking the .NET tab.
<b>-6242</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6241</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-6240</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6239</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6238</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6237</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6236</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6235</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6234</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6233</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6232</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6231</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6230</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6229</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6228</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-6227</b>	.NET scan of Component %1 failed	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
-6226	Opening Visual Studio .NET solution	<p>Make sure that the solution exists at the location specified. To find the solution information, navigate to the InstallShield table in the Direct Editor and find the value for ISDotNetSolution.</p> <p>In addition, ensure that Visual Studio is installed on the build machine.</p>
-6225	Resolving Visual Studio .NET project output "%1"	<p>Make sure the project exists in the solution. To find the solution information, navigate to the InstallShield table in the Direct Editor and find the value for ISDotNetSolution. In addition, ensure that project has the specified output.</p>
-6224	Processing merge module %1 of feature %2	<p>Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a>.</p>
-6223	Internal build error.	<p>Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a>.</p>
-6222	Internal build error.	<p>Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a>.</p>
-6221	Could not resolve Visual Studio .NET project output "%1" from component %2	<p>Make sure the project exists in the solution. To find the solution information, navigate to the InstallShield table in the Direct Editor and find the value for ISDotNetSolution. In addition, ensure that project has the specified output.</p>
-6220	Dynamically acquired %1 data conflicts with static data associated with component %2. Overwriting with dynamic data.	<p>This error occurs when manual entries made to the MsiAssembly and MsiAssemblyName tables conflict with .NET assembly properties that result from scanning. To eliminate this error, set the component's .NET Scan at Build property to None or delete the values that were manually added to the MsiAssembly and MsiAssemblyName tables.</p>
-6219	Internal build error.	<p>Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a>.</p>
-6218	Internal build error.	<p>Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a>.</p>
-6217	Internal build error.	<p>Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a>.</p>

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-5005</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-5004</b>	Could not open the project with write access.	Check to make sure the project is not already open by the IDE.
<b>-5003</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-5002</b>	Internal build error.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-5001</b>	Could not copy setup.ini.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4701</b>	An error occurred building the One-Click Install Web page.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4371</b>	There were warnings compiling InstallScript.	Use the InstallScript Debugger to step through your InstallScript to identify problems.
<b>-4370</b>	There were errors compiling InstallScript.	Use the InstallScript Debugger to step through your InstallScript to identify problems.
<b>-4354</b>	The build was unable to extract COM information from a file in a component.	Ensure that the file is self-registering and verify that the self-registration process does not fail.
<b>-4352</b>	There is no key file for the specified component. A key file is required for dynamic COM extraction.	Specify the key file for the specified component from the Components view.
<b>-4350</b>	Dynamically acquired MIME text/scriptlet conflicts with static data associated with component %1. Overwriting with dynamic data.	This warning occurs when you add a COM server .dll file using the Component Wizard, which does static COM extraction, and then later change the component's COM Extract at Build setting to Yes. The dynamically extracted data conflicts with the static data in the .ism file. Ensure that the COM extraction setting is accurate.
<b>-4349</b>	Failed to build %1 information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-4348</b>	Failed to build %1 information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4347</b>	Failed to build information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4346</b>	Failed to build information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4345</b>	Failed to build information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4344</b>	Failed to build information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4343</b>	Failed to build information for dynamically extracted COM components.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4340</b>	Failed to initialize COM extraction module.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4327</b>	Could not write string ID "%1" to the InstallScript strings file.	This error pertains to projects containing InstallScript (either an InstallScript MSI project or a Basic MSI project with InstallScript custom actions). At build time, InstallShield creates an .ini file that contains all of the string entries in the project. In the error message, "%1" represents the line number in this .ini file that fails to get written. If the line number is 0, a general failure to create or write to the .ini file occurred. This might indicate that you are out of disk space.
<b>-4303</b>	An unexpected error occurred while synchronizing the file key in the specified component.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4302</b>	A conflict was encountered while synchronizing file key %1 in component %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-4301</b>	Could not find the .msi file for key synchronization.	Check to ensure the specified MSI file exists.
<b>-4093</b>	Cannot copy source %1 to target %2	Ensure that the file exists, that there is enough disk space on the target location, and that you are able to copy to the location.
<b>-4092</b>	Error opening MSI database %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4075</b>	File not found. An error occurred merging module '%1' for feature '%2'.	<p>Verify that the merge module exists in the merge module search path.</p> <p>This error may occur if an installation project that contained an InstallScript MSI object was upgraded to InstallShield 2021, which no longer supports InstallScript MSI objects. If this is the case, remove that objects from your project through the Redistributables view. You can upgrade the InstallScript MSI object to InstallShield 2021, which will convert it to a merge module project. Then you can add that merge module to your installation project.</p>
<b>-4072</b>	Error retrieving the dependencies for %1.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-4006</b>	Cannot delete file.	Ensure the specified file exists and is not set to read-only.
<b>-3876</b>	Ignoring invalid template %1 in the Summary Stream.	InstallShield generates this warning if the Template Summary setting contains an invalid entry. To learn about how to enter valid values, see <a href="#">Using the Template Summary Property</a> .
<b>-3851</b>	Error building the specified table.	Use the Direct Editor to open the specified table and ensure data in that table is valid.
<b>-3713</b>	The function block must be in the form "Module::Function".	Change the function block to follow the form "Module::Function".
<b>-3204</b>	Cannot extract icon with specified index from the file specified for the icon.	Ensure the file containing the icon exists, and the index number is present in the file.

**Table 2** ▪ Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-3138</b>	The Patch Configuration specified does not exist in the project. Please verify that the Patch Configuration exists and that the spelling and character case match.	When using the BuildPatchConfiguration method on the IPWiProject object, this error might occur.
<b>-3114</b>	Application path %1 does not contain destination of associated component %2.	<p>This error occurs when an application path entry was created in the Advanced Settings section of the Components view, but no application path was specified. To correct this, set the application path entry.</p> <p>Because an application path is also a registry entry, this error might occur if a registry path like the following one is created, but it is missing the path entry:</p> <p>HKEY_LOCAL_MACHINE\Microsoft\Windows\CurrentVersion\App Paths</p> <p>To correct this, specify a path entry.</p>
<b>-3028</b>	An error occurred replacing string IDs in the specified table.	A required string ID was left blank in the specified table. Provide a string ID.
<b>-3016</b>	Failed to add Binary table %1 to package.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-2200</b>	Could not overwrite file.	Ensure the specified file is not read-only.
<b>-1531</b>	The size specified for the disk is too small for the feature.	Using the Release Wizard, change the Media Format to a larger size.
<b>-1530</b>	The size specified for the disk is too small for the file.	Using the Release Wizard, change the Media Format to a larger size.
<b>-1527</b>	No files are included in the project.	This warning occurs when you have not included any files in your project. Use the Files and Folders view to add files into your project to avoid this error.
<b>-1505</b>	Could not add the CAB file to the MSI package.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-1501</b>	Could not compress "%1" into "%2".	Ensure that IsCmdBld.exe is executed in the relative directory. You can do this by locating the files specified in the error message and launching IsCmdBld.exe within their directory.

**Table 2** • Build Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Information
<b>-1119</b>	The specified CUB file does not exist.	Ensure that the CUB file name is spelled correctly.
<b>-1027</b>	Failed signing %1.	Check the digital signature information (digital keys and password) provided for the current release.
<b>-1024</b>	File not found. Cannot stream the file into the Binary table.	Ensure the specified file exists.
<b>-1015</b>	Cannot copy source '%1' to target %2.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-1014</b>	Cannot rename a directory.	Windows Explorer or a DOS prompt may be pointing to a subfolder of the release output folder (Disk1) or to the Intern folder, locking it. Change the current directory. Close any open files in the Disk1 folder. Close Msidb.exe if it is open.
<b>-1013</b>	The specified file is being used by another program.	Close the application that is currently using the file and re-run the build process.
<b>-1009</b>	Insufficient disk space or the target drive cannot be located.	Increase disk space on the build target, or select a new target for the build. If the target drive cannot be located, select a new target, or ensure permissions are set correctly for the target drive.
<b>-1007</b>	Cannot copy source %1 to target %2	Ensure that the file exists, that there is enough disk space on the target location, and that you are able to copy to the location.
<b>-1005</b>	Could not compress %1 into %2 (where %1 is the full path to a file and %2 is the name of a .cab file).	This error could occur when you are building a compressed setup and run out of disk space or temporary space on the machine. Another reason that this error might occur is due to an internal error occurred with the CAB APIs. For more information, request <a href="#">technical support</a> .
<b>-1001</b>	Error opening MSI database.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-1000</b>	Invalid product configuration. Failed to create directory.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .

# Media Build Errors and Warnings

Media build errors that occur before the build is generated are displayed in an error message dialog box; those that occur while the build is generated are displayed in the Output window and are recorded in the log file.

**Table 3** • Media Build Errors and Warnings

Error or Warning Number	Message
<b>118</b>	Could not find CAB file with file #number. The system cannot find the path specified.
<b>129</b>	Media too small. Could not fit filename on disk number.
<b>-5000</b>	File group 'file group name' contains a link to a non-existent file - 'filename'.
<b>-5006</b>	'EnterPassword' dialog resource not found in resource library filename.
<b>-5020</b>	The built media files could not be uploaded to the site URL. The URL could not be parsed.
<b>-5021</b>	The built media files could not be copied to the folder 'path'.
<b>-5032</b>	Failed to sign the self-extracting executable file.
<b>-5050</b>	The font data could not be read from the project file. The 'Font' table may be missing from the project.
<b>-5051</b>	Unable to create font data file: 'data file path and name'
<b>-7040</b>	No features included in the media.
<b>-7041</b>	Could not create instance of CABEngine. CABEngine component might not be installed or registered properly. You may need to reinstall InstallShield.
<b>-7043</b>	Could not open the following media for the differential build - "path to media header file"
<b>-7044</b>	Product Version is not specified in the Project Settings property sheet.
<b>-7045</b>	File could not be found - "InstallShield Program Files Folder\Redistributable\Compressed Files\Language Independent\OS Independent\Corecomp.ini"
<b>-7126</b>	Not enough free disk space.
<b>-7127</b>	The Disk Images directory is use by another program.
<b>-7275</b>	Certificate invalid.

**Table 3** • Media Build Errors and Warnings (cont.)

Error or Warning Number	Message
-7276	Certificate expired.
-7380	Build canceled by the user.
-9008	Failed saving object property.

## Error 118

### Message

Could not find CAB file with file *#number*. The system cannot find the path specified.

### Troubleshooting Information

This error occurs when you build an already built media and one of the cabinet files that was previously created no longer exists.

If you encounter this error, rebuild the media.

## Error 129

### Message

Media too small. Could not fit *filename* on disk *number*.

### Troubleshooting Information

This error can occur for any of the following reasons:

- Total size of files required to be on one disk is greater than selected disk size.
- An installation requires that certain files reside on the first disk, including the files placed in the Support Files view (such as Setup.bmp and License.txt) and Data1.cab. Also, an installation requires that certain files be compressed in Data1.cab, including the following:
  - files needed by the objects you have included in your setup
  - resource files for each language your installation supports
  - the file for the dialog box skin you selected

If your installation includes a large skin, setup files, or objects—or a large number of support files, objects, or languages—the total size of files required to be on the first disk can be greater than the disk size you selected in the Release Wizard's Media Type panel.

To avoid this error and complete the build successfully, you must either remove the skin or some support files or objects from your project, reduce the size of some support files or choose a skin with a smaller file, or select a larger disk size.

If the error message specifies a disk other than disk 1, some of the files in your components may be too large to fit on the disk even when they have been compressed. In this case, you must either remove the large files, reduce their size, or select a larger disk size.

- There is not enough space on your drives.

To create the installation's cabinet files, the release builder requires space in the system's temporary folder and in the build location. To avoid this error, make sure you have enough free space on the drive on which the system's temporary folder resides and the drive on which you have specified the build location.

You can find the system's temporary folder by typing in the word "set" at a DOS prompt. The temporary folder is identified by the value of the environment variable TEMP. You can find the build location by looking at the Release Wizard's General Options panel's Advanced dialog box or the Release view's Release Location property.

- There is not enough virtual memory.

On Windows NT, this error can be caused by a lack of free virtual memory rather than a lack of free hard disk space. For information, visit [Knowledge Base](#) article Q102757.

## Warning -5000

### Message

Component '*component name*' contains a link to a non-existent file - '*filename*'

### Troubleshooting Information

The indicated component contains a link to the indicated file, which cannot be found. Remove the file from the component, or if you have renamed or moved the file, restore it to the indicated name and location.

## Warning -5006

### Message

'EnterPassword' dialog resource not found in resource library *filename*.

### Troubleshooting Information

You have selected the Show Password dialog during setup initialization option in the Release Wizard's Password panel or the Show Password Dialog property in the Releases view, but one or more copies of \_Isres.dll do not contain a resource template for this dialog box. (A separate instance of this warning is displayed for each copy of \_Isres.dll that does not contain the resource template.) To fix this problem, you must use the Premier edition of InstallShield.

## Warning -5020

### Message

The built media files could not be uploaded to the site URL. The URL could not be parsed.

## Troubleshooting Information

Verify that the URL you specified in the Release view's FTP Host Address property exists.

## Warning -5021

### Message

The built media files could not be copied to the folder 'path'.

### Troubleshooting Information

You have selected the Copy the built media files to the folder option in the Release Wizard's Postbuild Options panel or the Copy to Folder property in the Release view; the built media files could not be copied to the folder that you specified with that option. Make sure that the path you specified exists and is writable.

## Warning -5032

### Message

Failed to sign the self-extracting executable file.

### Troubleshooting Information

The build failed to sign the self-extracting executable file as specified in the Release Wizard's Digital Signature panel or the Release view's Sign Media property. Among the possible causes of this error are an invalid or missing private key file.

## Warning -5050

### Message

The font data could not be read from the project file. The 'Font' table may be missing from the project.

### Troubleshooting Information

Check the Direct Editor to see if a Font table is included in your project. If it is not, and you cannot use source control software to roll back to a version of your project that did include that table, try deleting the font files from your project and then re-including them.

## Warning -5051

### Message

Unable to create font data file: '*data file path and name*'

## Troubleshooting Information

Make sure that the specified path exists and is writable, and that a read-only file of the same name does not already exist at the same location.

## Error -7040

### Message

No features included in the media.

### Description

Your specified media does not contain any features. All media builds must include at least one feature.

## Troubleshooting Information

Make sure that you have created at least one feature in the Features view.

## Error -7041

### Message

Could not create instance of CABEngine. CABEngine component might not be installed or registered properly. You may need to reinstall InstallShield.

## Troubleshooting Information

To resolve the problem, manually register the file MediaBuild40.dll (in the InstallShield\MediaBuild folder of your build machine's common files folder) using Regsvr32.exe (in the Windows system folder), using a DOS command line like the following:

```
Regsvr32.exe "C:\Program Files\Common Files\InstallShield\MediaBuild\MediaBuild40.dll"
```

## Error -7043

### Message

Could not open the following media for the differential build - "*path to media header file*"

## Troubleshooting Information

The message refers to a media header file that you specified in the Differential Media list box in the Release Wizard's Update panel. This error can be caused by any of the following conditions:

- The file does not exist.
- The file is corrupted.
- The file is an incompatible media, for example, a media built by InstallShield Professional 5.x.

## Error -7044

### Message

Product Version is not specified in the Product Properties view.

### Troubleshooting Information

You must specify a non-null value in the Product Version setting in the General Information view.

## Error -7045

### Message

File could not be found - "*path*\Corecomp.ini"

### Troubleshooting Information

Corecomp.ini could not be found in the indicated location. If you have renamed or moved Corecomp.ini, place a copy in the indicated location with the file name Corecomp.ini. If you cannot restore Corecomp.ini in this way, run a repair of InstallShield.

## Error -7126

### Message

Unable to build the setup.

### Description

There is not enough free disk space to build the setup.

### Troubleshooting Information

The Media Wizard requires space in the system's temporary folder. Make sure you have enough free space on this drive, as well as in the build location.

## Error -7127

### Message

The Disk Images directory is use by another program.

### Troubleshooting Information

This error can occur for any of the following reasons:

- The Disk Images or Disk1 folder that you are trying to build to may be open in Windows Explorer or DOS. Open a different folder in the Windows Explorer or DOS window, or close the window, and then rerun the media builder.

- The Disk Images or Disk1 folder is read-only. Right-click the folder in Windows Explorer and click Properties. If the folder is marked as read-only, uncheck the read-only check box and then rerun the media builder.
- A folder named bldback exists under the folder where the media is being built to. If such a folder exists, delete it, and then rerun the media builder.

## Error -7275

### Message

Certificate invalid.

### Troubleshooting Information

The digital certificate that is specified for your project is invalid. Specify a valid certificate and build again.

## Error -7276

### Message

Certificate expired.

### Troubleshooting Information

Your digital certificate has expired. Specify a current certificate and build again.

## Error -7380

### Message

Build canceled by the user.

### Description

The build has been canceled by the user.

### Troubleshooting Information

The user canceled the build process by clicking the Cancel button.

## Error -9008

### Message

Failed saving object property.

### Troubleshooting Information

This error can occur if an object in the project is corrupted (for example, is missing Isrt.dll).

## MSI/MSM Conversion Errors

The table below provides troubleshooting tips for each error that could be encountered while converting an installation package (.msi file) or merge module (.msm file) in the Open MSI/MSM Wizard.

The wizard also returns errors from accessing Windows Installer databases. For more information on those errors, see [Build Errors and Warnings](#). You might receive undocumented, internal errors if the source .msi or .msm package is invalid.

**Tip** • Before launching the Open MSI/MSM Wizard, validate the package with Orca or Msival2.exe, both part of the Microsoft Windows Installer Platform SDK.

**Table 4** • MSI and MSM Conversion Errors

Error Number	Message	Troubleshooting Tips
-6000	Unable to open file	<p>The path to the .msi or .msm file might be invalid.</p> <p>The file might be open or in use by another program.</p> <p>The file might have been corrupted or might not be a valid Windows Installer database.</p>
-6001	Unsupported database schema	<p>The Open MSI/MSM Wizard supports databases compatible with schema 30 or later only. To determine the schema of the .msi or .msm file, open it in Orca and on the <b>View</b> menu, click <b>Summary Information</b>. In some cases, you can work around this error simply by changing the <b>Schema</b> field in the <b>Edit Summary Information</b> dialog box.</p>
-7000	Could not create record	<p>If the record already exists, the wizard will not create a duplicate entry found in the file.</p>
-7001	Foreign key invalid	<p>The wizard could not create a record because the record referenced by a foreign key in the .msi or .msm database was invalid or missing.</p>
-7002		
-7004		
-7005	Unable to set string property	<p>The Open MSI/MSM Wizard could not set a string value, probably because the field was a duplicate in the database file. This error might have resulted from an earlier failure to create a record (error -7000, -7001, -7002, or -7004).</p>

**Table 4 •** MSI and MSM Conversion Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-7006</b>	Unable to set integer property	The Open MSI/MSM Wizard could not set an integer value, probably because the field was a duplicate in the database. This error might have resulted from an earlier failure to create a record (error -7000, -7001, -7002, or -7004).
<b>-7008</b>	Unable to set property	The Open MSI/MSM Wizard could not set a value, probably because the field was a duplicate in the database. This error might have resulted from an earlier failure to create a record (error -7000, -7001, -7002, or -7004).
<b>-7009</b>	Unable to create binary file	<p>The wizard could not extract a binary file, an icon, or an .rtf file from the file and copy it to the new project location.</p> <p>Delete any existing file in the extraction directory.</p> <p>Ensure there is enough disk space and that you have the appropriate write privileges for the extraction directory.</p>
<b>-7010</b>	Output path for cab extraction does not exist	<p>The wizard could not extract a .cab file using the path specified.</p> <p>Instead of typing the output path for the .cab file, click <b>Browse</b> to select the path and then launch the wizard again.</p>
<b>-7011</b>	Cannot delete temporary .cab file	Unable to delete the temporary .cab file after extracting it from the installation package or merge module.
<b>1001</b>	Invalid source MSI database path	Ensure that the path to the .msi database is valid.
<b>1017</b>	End user aborted process	Allow the conversion process to complete.
<b>100001</b>	Unexpected error	The error message lists the function and table name associated with the error.
<b>100002</b>	Unable to extract file from the cabinet	Verify that the source is a valid .msi or .msm database.

**Table 4 •** MSI and MSM Conversion Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>200001</b>	No output path was specified	This warning appears if the converter needs to extract binary files from the database tables or cabinet files, but an invalid output path was specified in the Data File Location box on the <b>File Locations</b> panel of the Open MSI/MSI Wizard.

## Internal Errors

The following are internal errors. They should not be encountered when importing a valid .msi or .msm database. Before launching the Open MSI/MSM Wizard, validate the package with Orca or Msival2.exe, both part of the Microsoft Windows Installer Platform SDK.

The error message will display the database table, field, and value for which the conversion failed.

**Table 5 •** Internal Errors

Error Number	Message	Troubleshooting Tips
<b>1002</b>	Invalid target database path	Verify that your default project location path is valid. To verify the path, on the <b>Tools</b> menu, click <b>Options</b> . The default project location path is specified on the File <b>Locations</b> tab.
<b>1003</b>	Failed to open the source MSI/MSM database	Ensure that the database is not locked or open in another application.
<b>1004</b>	Failed to open the target database	Ensure that the project file is not locked or open in another application.  Verify that your default project location path is valid. To verify the path, on the <b>Tools</b> menu, click <b>Options</b> . The default project location path is specified on the File <b>Locations</b> tab.
<b>1006</b>	Failed to obtain table list for the source or target MSI/MSM database	Verify that the source is a valid .msi or .msm database.
<b>1007</b>	Failed to obtain a field	This is generally caused by failure of the MsiRecordGetXXX API. Verify that the source is a valid Windows Installer database.
<b>1009</b>	MsiCreateRecord failure	Ensure that the project file is not locked or open in another application.

**Table 5** • Internal Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>1010</b>	Failed to update a field	This is generally caused by failure of the MsiRecordSetXXX API.  Ensure that the project file is not locked or open in another application.
<b>1011</b>	Failed to insert a record into a table	Ensure that the project file is not locked or open in another application.
<b>1012</b>	Failed to extract binary data from the source MSI/MSM database	Delete any existing file in the extraction directory.  Ensure that there is enough disk space and that you have the appropriate write privileges in the output path specified in the <b>Data File Location</b> box on the <b>File Locations</b> panel of the Open MSI/MSI wizard.
<b>1013</b>	Failed to stream a file into the target database	Ensure that the project file is not locked or open in another application.
<b>1014</b>	MsiDatabaseCommit failed	Ensure that the project file is not locked or open in another application.
<b>5001</b>	Failed to resolve a field value	This is generally caused by an unexpected database schema. See troubleshooting notes for <a href="#">error -6001</a> .
<b>5002</b>	Incompatible field type between source and target MSI database	Verify that the source is a valid .msi or .msm database.

## Windows Installer Run-time Errors

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module
- MSI Database
- MSM Database
- QuickPatch
- Transform

The following table contains a listing of Windows Installer errors that may occur during run time of an installation. The errors are related to the built-in InstallShield custom actions that are added automatically to InstallShield projects to support different functionality. For a list of the custom actions, see [InstallShield Custom Action Reference](#).

**Tip** • You can find detailed information—including resolution information—on some of the run-time errors in the [Knowledge Base](#).

**Table 6** • Windows Installer Run-time Errors

Error Number	Message	Troubleshooting Information
<b>27500</b>	This setup requires Internet Information Server for configuring IIS Virtual Roots. Please make sure that you have IIS installed.	<p>This error may occur if your project contains IIS data that you configured in the Internet Information Services view.</p> <p>If you encounter this error, ensure that the target system has IIS installed.</p>
<b>27501</b>	This setup requires Administrator privileges for configuring IIS Virtual Roots.	<p>This error may occur if your project contains IIS data that you configured in the Internet Information Services view.</p> <p>This error occurs if you do not have administrator privileges for configuring IIS virtual directories, but you are running an installation that configures IIS virtual directories.</p>
<b>27502</b>	Could not connect to [2] [3]. [4]	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if the installation was unable to connect to the specified database server.</p>
<b>27503</b>	Error while retrieving version information from the specified database server.	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if you specified the minimum version requirement for a database server on the Requirements tab for a SQL connection in the SQL Scripts view, but the installation could not determine what version of the database server exists on the target system.</p>

**Table 6 •** Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27504</b>	The specified database server does not meet the version requirements.	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if the target system does not meet the minimum version requirements for a database server that is selected on the Requirements tab for a SQL connection in the SQL Scripts view. Note that in this scenario, this error occurs only if the <b>Allow installation to continue when minimum requirements are not met</b> check box on this tab is cleared.</p>
<b>27505</b>	Fail to open a SQL script file.	<p>This error may occur if your project contains a SQL script that you configured in the SQL Scripts view, and the run time fails to extract the SQL script file from the .msi package.</p>
<b>27506</b>	Error while executing a SQL script.	<p>This error may occur if your project contains a SQL script that you configured in the SQL Scripts view.</p> <p>This error occurs if the target database server encounters a SQL scripting error. To resolve this error, check the SQL script in your project and make any necessary changes.</p>
<b>27507</b>	Browsing for SQL Servers requires that ODBC32.dll be installed and registered.	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>To prevent this error from occurring, add the InstallShield prerequisite for MDAC to your installation project.</p>
<b>27508</b>	Error installing COM+ application [2]. [3]	<p>This error may occur if your project contains a COM+ application that you configured in the Component Services view.</p> <p>This error occurs if there are missing dependencies for COM+ component DLLs or incorrect settings for your COM+ application. To resolve this error, add the dependencies to your project or check the COM+ application in your project and make any necessary changes.</p>

**Table 6 •** Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27509</b>	Error uninstalling COM+ application [2]. [3]	<p>This error may occur if your project contains a COM+ application that you configured in the Component Services view.</p> <p>This error occurs if the run time fails to delete the COM+ application from the system.</p>
<b>27510</b>	Error installing COM+ application [2]. Could not load Microsoft(R) .NET class libraries. Registering .NET serviced components requires that Microsoft(R) .NET Framework be installed.	<p>This error may occur if your project contains a COM+ application that you configured in the Component Services view.</p> <p>To prevent this error from occurring, consider adding the .NET Framework to your project. To learn how, see <a href="#">Adding .NET Framework Redistributables to Projects</a>.</p> <p>As an alternative, you can use the Installation Requirements page in the Project Assistant to add a .NET Framework requirement to your project. If a target system does not have the appropriate version of the .NET Framework, the installation displays an error message, and the product is not installed.</p>
<b>27511</b>	Could not execute SQL script file [2]. Connection not open: [3]	<p>This error may occur if your project contains a SQL script that you configured in the SQL Scripts view.</p> <p>This error occurs if the connection is disconnected before the installation runs the SQL script.</p>
<b>27514</b>	This installation requires a Microsoft SQL Server. The specified server [3] is a Microsoft SQL Server Desktop Engine or SQL Server Express.	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if the target system has Microsoft SQL Server Desktop Engine or Microsoft SQL Server Express, and if the following check boxes are cleared on the Requirements tab for a SQL connection in the SQL Scripts view:</p> <ul style="list-style-type: none"> <li>• Allow installation to Microsoft SQL Server Desktop Engine/SQL Server Express</li> <li>• Allow installation to continue when minimum requirements are not met</li> </ul>

**Table 6 •** Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27515</b>	Error retrieving schema version from [2] [3]. Database: [4]. [5]	<p>This error may occur if your project contains a SQL script that you configured in the SQL Scripts view, and if a version is specified in the Schema Version setting on the General tab for that SQL script.</p> <p>This error occurs if the target database server encounters a SQL script error when the run time attempts to retrieve the current schema version from the InstallShield table.</p>
<b>27516</b>	Error writing schema version to [2] [3]. Database: [4]. [5]	<p>This error may occur if your project contains a SQL script that you configured in the SQL Scripts view, and if a version is specified in the Schema Version setting on the General tab for that SQL script.</p> <p>This error occurs if the target database server encounters a SQL script error when the run time attempts to write a schema version to the InstallShield table.</p>
<b>27517</b>	This installation requires Administrator privileges for installing COM+ applications. Log on as an administrator and then retry this installation.	<p>This error may occur if your project contains a COM+ application that you configured in the Component Services view.</p> <p>This error occurs if you do not have administrator privileges for installing COM+ applications, but you are running an installation that includes COM+ applications.</p>

**Table 6** • Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27519</b>	Error updating XML file [2]. [3]	<p>This error may occur if your project contains XML references that you configured in the XML File Changes view.</p> <p>This error occurs if MSXML fails to save the target XML file. The [3] parameter refers to the error code that MSXML returned. Possible error codes are:</p> <ul style="list-style-type: none"> <li>● <b>XML_BAD_ENCODING</b>—The XML file contains a character that is not part of the specified encoding, which is defined on the Advanced tab for an XML file in the XML File Changes view.</li> <li>● <b>E_INVALIDARG</b>—The XML file does not have a valid file name.</li> <li>● <b>E_ACCESSDENIED</b>—A file system error occurred.</li> <li>● <b>E_OUTOFMEMORY</b>—The XML file could not be saved.</li> </ul> <p>Other values that can occur indicate that a file system error occurred.</p>
<b>27520</b>	Error opening XML file [2]. [3]	<p>This error may occur if your project contains XML references that you configured in the XML File Changes view.</p> <p>This error occurs if MSXML fails to load the target XML file. The [3] parameter refers to the error code that MSXML returned. A possible error codes is:</p> <ul style="list-style-type: none"> <li>● <b>S_FALSE</b>—The XML file load failed.</li> </ul>
<b>27521</b>	This setup requires MSXML 3.0 or higher for configuring XML files. Please make sure that you have version 3.0 or higher.	<p>This error may occur if your project contains XML references that you configured in the XML File Changes view.</p> <p>To prevent this error from occurring, consider using the Redistributables view to add an InstallShield prerequisite or merge module for MSXML to your project.</p>
<b>27524</b>	Error loading NetApi32.DLL. The ISNetApi.dll needs to have NetApi32.DLL properly loaded and requires an NT based operating system.	<p>This error may occur if you added to your project the ability to <b>create or set a Windows user account</b>. The error occurs if NetApi32.dll cannot be loaded on the target system.</p>

**Table 6 •** Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27525</b>	Server not found. Verify that the specified server exists. The server name can not be empty.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you do not enter an existing domain or server name on the LogonInfoNameAndServer dialog or the LogonInformation dialog.
<b>27526</b>	Unspecified error from ISNetApi.dll.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if an unexpected error is returned from a function in NetApi32.dll.
<b>27527</b>	The buffer is too small.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if the run time cannot allocate the amount of memory that is required for retrieving a list of all servers that are visible in a domain.
<b>27528</b>	Access denied. Check administrative rights.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if the user does not have access to the Windows user account information that is being configured.
<b>27529</b>	Invalid computer.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if the computer name that was entered is invalid.
<b>27531</b>	Unhandled exception.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if one of the function calls in NetApi32.dll throws an exception.
<b>27532</b>	Invalid user name for this server or domain.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you specify a user name that does not exist on a domain in the LogonInformation dialog or the LogonInfoNameAndServer dialog.
<b>27533</b>	The case-sensitive passwords do not match.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you enter different passwords in the Password setting and the Confirm Password setting on the LogonInfoCreateUser dialog.

**Table 6** • Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27534</b>	The list is empty.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if the LogonInfoListServers dialog needs to be displayed but no servers are found.
<b>27535</b>	Access violation.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if a memory access violation is encountered when information about user accounts or servers is retrieved and being processed.
<b>27536</b>	Error getting group.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if the installation encounters an error when retrieving information about a group account.
<b>27537</b>	Error adding user to group. Verify that the group exists for this domain or server.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you try adding membership of a user account to a group but the account type is invalid, the member is already a member of the group, or the member does not exist.
<b>27538</b>	Error creating user.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if the installation encounters a problem when creating the user account or adding the user to a group.
<b>27539</b>	ERROR_NETAPI_ERROR_NOT_PRIMARY returned from NetAPI.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you are trying to add a user account, give an existing user account membership, or delete a user account, but the operation is allowed only on the primary domain controller of the domain.
<b>27540</b>	The specified user already exists.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you are trying to create a new user account but the user account already exists.
<b>27541</b>	The specified group already exists.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if you are trying to create a new user account but the group already exists.

**Table 6** • Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27542</b>	Invalid password. Verify that the password is in accordance with your network password policy.	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>.</p> <p>The error occurs if you are creating a new user account but the password that you specified does not meet the password requirements that were established for the network. To resolve this error, enter an appropriate password.</p>
<b>27543</b>	Invalid name.	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>. The error occurs if you are giving an existing user account membership in a group, or if you are deleting a user account, but the user name that you specified could not be found.</p>
<b>27544</b>	Invalid group.	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>. The error occurs if you are giving a user account membership in a group, but the group that you specified does not exist.</p>
<b>27545</b>	The user name can not be empty and must be in the format DOMAIN\Username.	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>. The error occurs if you are configuring a user account but you did not enter valid information for the User Name setting.</p>
<b>27546</b>	Error loading or creating INI file in the user TEMP directory.	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>. The error occurs if there is a problem opening or creating a configuration .ini file that the InstallShield custom actions use for the creation or configuration of a Windows user account.</p>
<b>27548</b>	Error deleting INI file containing new user information from the user's TEMP directory.	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>. The error occurs if there is a problem deleting the configuration .ini file that the InstallShield custom actions use for the creation or configuration of a Windows user account.</p>
<b>27549</b>	Error getting the primary domain controller (PDC).	<p>This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a>. The error occurs if the domain controller for the specified domain could not be found.</p>

**Table 6** • Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
<b>27550</b>	Every field must have a value in order to create a user.	This error may occur if you added to your project the ability to <a href="#">create or set a Windows user account</a> . The error occurs if one of the settings on the LogonInfoCreateUser dialog is left blank.
<b>27551</b>	ODBC driver for [2] not found. This is required to connect to [2] database servers.	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if the ODBC driver that is associated with the SQL connection does not exist on the target system. To prevent this error from occurring, consider creating an InstallShield prerequisite that installs the driver, and add the prerequisite to your project.</p>
<b>27552</b>	Error creating database [4]. Server: [2] [3]. [5]	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view, and if the Create Catalog If Absent check box on the General tab for the connection is selected.</p> <p>This error occurs if the target database server encounters a SQL scripting error when creating the database catalog that is specified in the Catalog Name setting on the General tab for a SQL connection in the SQL Scripts view.</p>
<b>27553</b>	Error connecting to database [4]. Server: [2] [3]. [5]	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if the target database server encounters a SQL scripting error when connecting to the database catalog that is specified in the Catalog Name setting on the General tab for a SQL connection in the SQL Scripts view.</p>
<b>27554</b>	Error attempting to open connection [2]. No valid database metadata associated with this connection.	<p>This error may occur if your project contains a SQL connection that you configured in the SQL Scripts view.</p> <p>This error occurs if the connection is associated with no valid database metadata. To prevent this error from occurring, check the ISSQLConnectionDBServer table in the Direct Editor view, and make any necessary changes.</p>

**Table 6** • Windows Installer Run-time Errors (cont.)

Error Number	Message	Troubleshooting Information
27555	Error attempting to apply permissions to object [2]. System error: [3] ([4])	This error may occur if you used the custom InstallShield handling for securing files, folders, or registry keys in your project. To learn more about this functionality, see <a href="#">Securing Files, Folders, Registry Keys, and Windows Services in a Locked-Down Environment</a> .

## Setup.exe Return Values and Run-Time Errors (InstallScript Projects)

**Project** • This information applies to InstallScript projects.

Setup.exe may produce error messages if it cannot start properly. In most cases, you will encounter these messages when a severe error occurs. Rarely will your end users see these messages.

You can capture these return values when you call the **CreateProcess** API to launch Setup.exe, or use a batch file to launch Setup.exe.

When you get an error message, it appears in a message box. Every error message has a number. These are InstallScript system error messages, and there is no way to suppress them in your script. The following table describes each of these error messages:

**Table 7** • Run-time Errors and Return Values for InstallScript Projects

Error/Return Value	Description
3010	<p>The installation required a restart but the installation is not initiating the restart. In this case, the installation completed with BATCH_INSTALL set to a non-zero value, but the <b>System</b> function was not called.</p> <p>Note that Setup.exe returns this value only if the installation was successful and was not cancelled (that is, the installation did not end via the abort keyword). Otherwise, the appropriate error value or ISERR_SETUP_CANCELED is returned.</p> <p>The constant for this return value is ERROR_SUCCESS_REBOOT_REQUIRED.</p>
1641	<p>This return value occurs if the installation itself is restarting the machine because the <b>System</b> function was called—typically as a result of the <b>SdFinishReboot</b> function calling <b>System</b> internally.</p> <p>Note that Setup.exe returns this value only if the installation was successful and was not cancelled (that is, the installation did not end via the abort keyword). Otherwise, the appropriate error value or ISERR_SETUP_CANCELED is returned.</p> <p>The constant for this return value is ERROR_SUCCESS_REBOOT_INITIATED.</p>

**Table 7** ▪ Run-time Errors and Return Values for InstallScript Projects (cont.)

Error/Return Value	Description
<b>0</b>	The installation exited with the exit keyword.
<b>0x80042000</b>	The installation exited with the abort keyword because the end user canceled the installation.  The constant for this return value is ISERR_SETUP_CANCELED.
<b>0x80040708</b>	Unable to create required engine components. Check whether you have appropriate privileges to create COM components.   <b>Note</b> ▪ This error message may include an additional error number and error string indicating more specific error information returned by the operating system.
<b>-5001</b>	Generic error
<b>-5002</b>	Failed reading media header.
<b>-5003</b>	Failed installing kernel.
<b>-5004</b>	Failed starting kernel.
<b>-5005</b>	Failed opening CAB.
<b>-5006</b>	Failed installing support.
<b>-5007</b>	Failed setting text substitution.
<b>-5008</b>	Failed initializing installation information.
<b>-5009</b>	Failed getting installation driver.
<b>-5010</b>	Failed initializing properties.
<b>-5011</b>	Failed running installation driver.
<b>-5012</b>	Failed uninstalling support.
<b>-5013</b>	Failed to extract file from setup boot file.
<b>-5014</b>	Failed to download file (occurs only when saving installation files during an Internet installation).
<b>-5017</b>	Could not clone the installation.
<b>-6001</b>	Failed starting the setup launcher.

**Table 7** ▪ Run-time Errors and Return Values for InstallScript Projects (cont.)

Error/Return Value	Description
<b>-6002</b>	Failed finding the setup launcher.
<b>-6003</b>	Failed loading the setup launcher.
<b>-6004</b>	Failed verifying the signature of setup launcher.
<b>-6005</b>	Failed installing the setup launcher to proper location.
<b>-6006</b>	Failed extracting setup launcher.

Typically, any time one of the error messages in the previous table is displayed, it is accompanied by one of the HRESULT values in the following table. These HRESULT values provide additional information about the cause of the error.

**Table 8** ▪ HRESULT Values Associated with Setup.exe Run-time Errors

HRESULT	Meaning
<b>0x80041F40</b>	Cannot find corecomp.in.i
<b>0x80041F41</b>	corecomp.ini is empty or corrupted.
<b>0x80041F42</b>	Cannot load the .dll file inIsCoGetClassObject.
<b>0x80042328</b>	Media is not signed.
<b>0x80042329</b>	Certificate is invalid.
<b>0x8004232A</b>	Digital signature is invalid.
<b>0x8004232B</b>	Space is insufficient.
<b>0x80042A94</b>	The specified opType's main opsequence is not present in the log, such as when an old file is opened with the new engine, and the new (engine) code tries to get an opsequence for the newly introduced opType.
<b>0x80042A95</b>	Failed to (re)construct a feature log's full ID.
<b>0x80042A96</b>	A log operation was attempted without opening the log file.
<b>0x80042A97</b>	Internal opsequence structure initialization failed.
<b>0x80042A98</b>	General failure in Opsequence::GetNext
<b>0x80042A99</b>	General failure in Opsequence::Pop
<b>0x80042A9A</b>	General failure in Opsequence::insert_sequencetuple

**Table 8** • HRESULT Values Associated with Setup.exe Run-time Errors (cont.)

HRESULT	Meaning
0x80042A9B	General failure in Opsequence::delete_sequencetuple
0x80042A9C	Property initialization failure - could occur when setting/getting a property in the LogDB or Feature object.

## Setup.exe Return Values and Run-Time Errors (Basic MSI and InstallScript MSI Projects)

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Note that project-specific differences are explained where applicable.

The table below lists the errors that might occur when Setup.exe from a Basic MSI or InstallScript MSI project is run. For Setup.exe errors that might occur for an InstallScript project, see [Setup.exe Return Values and Run-Time Errors \(InstallScript Projects\)](#).

You can capture these return values when you call the **CreateProcess** API to launch Setup.exe, or use a batch file to launch Setup.exe.

**Note** ▪ If an error occurs on a non-English system, the error strings may not be displayed in English.

**Table 9** • Setup.exe Run-time Errors and Return Values

Error or Status Number	Message	Troubleshooting Tips
-4	Invalid command line.	 <b>Project</b> ▪ This is applicable to InstallScript MSI projects. Verify that a valid command line is passed to Setup.exe.
-3	The installation exited because the end user canceled the installation.	 <b>Project</b> ▪ This is applicable to InstallScript MSI projects.
-1	General error.	 <b>Project</b> ▪ This is applicable to InstallScript MSI projects.

**Table 9** • Setup.exe Run-time Errors and Return Values (cont.)

Error or Status Number	Message	Troubleshooting Tips
<b>0</b>	Program terminated successfully.	Not applicable.
<b>401</b>	String variable is not large enough for string. InstallShield was attempting to copy a text string into a string variable. The text string was larger than the length declared for that string variable.	Check the declared length of the string variable. Increase the length to the maximum allowed value.
<b>1150</b>	Setup has detected an incompatible version of Windows. Click OK and relaunch the setup on Windows 95, Windows NT 4.0, or later.	Windows Installer is compatible with NT 4.0 and later, and Windows 9x and later. Check your version of Windows and upgrade if necessary.
<b>1151</b>	Error writing to the temporary location	To write to the temporary location, the environment variable TEMP must be set. Verify that the Temp folder exists and has enough disk space to accommodate the setup. If there are files in the Temp folder, delete them and rerun Setup.exe.
<b>1152</b>	Error extracting <file name> to the temporary location	Check to see that you are able to write to the Temp folder (see errors above). If the Temp folder is valid, there may be corrupted files in the setup. Check the files to ensure none are corrupted and rerun Setup.exe.
<b>1153</b>	Error reading setup initialization file	The Setup.ini file must be located in the same folder as Setup.exe. If not, move Setup.ini to that location.
<b>1154</b>	Installer not found in <path>	Windows Installer may not have been properly installed, or you may have an older version. Reinstall if necessary.
<b>1155</b>	File <file name> not found	Make sure the .msi file exists. If so, make sure it is located in the same folder as Setup.exe. You may not see the .msi file if you chose to compress it into Setup.exe.
<b>1156</b>	Internal error in Windows Installer	Windows Installer was unsuccessfully installed. Run the InstMsiW.exe file (for Windows NT and 2000) or InstMsiA.exe (for Windows 9x) to reinstall.

**Table 9** ▪ Setup.exe Run-time Errors and Return Values (cont.)

Error or Status Number	Message	Troubleshooting Tips
<b>1157</b>	Failed to launch Msiexec.exe.	<p>Make sure you distribute the correct version of Windows Installer for the target platform.</p> <p>Check the syntax on your Msiexec.exe command-line arguments.</p>
<b>1158</b>	Error populating strings.	Verify that all strings in Setup.ini and any language-specific INI files in the Disk1 folder (such as 0x0409.ini) are valid.
<b>1201</b>	Setup needs <amount> KB free space in <folder>. Please free up some space and try again.	There is insufficient disk space in your target location. Please make sure there is at least 10 MB of free space in the drive where the setup is set to install.
<b>1202</b>	You do not have sufficient privileges to complete this installation for all users of the machine. Log on as an administrator and then retry this installation.	In Windows NT 4.0 and 2000, you must have administrative rights to complete this installation.
<b>1203</b>	Invalid command-line parameters.	Double-check the command-line statement used to launch Setup.exe.
<b>1208</b>	ANSI code page for <language> is not installed on the system and therefore setup cannot run in the selected language. Run the setup and select another language.	Run the setup and select another language.
<b>1603</b>	General Windows Installer engine error. Increase DiskSpace requirement in Setup.ini and try again.	 <p><b>Project</b> ▪ This is applicable to Basic MSI projects.</p> <p>Reinstall Windows Installer.</p>
<b>1611</b>	Unable to extract the file <filename>.	This error occurs when a file compressed inside Setup.exe cannot be extracted. Verify that there is sufficient disk space available in the Temp folder (or, if not, in the Windows or WinNT folder), and that Setup can write to those folders.

**Table 9** • Setup.exe Run-time Errors and Return Values (cont.)

Error or Status Number	Message	Troubleshooting Tips
<b>1614</b>	An error occurred while downloading the file <filename>.	<p>If the URL is incorrect, click <b>Cancel</b> and enter the correct URL.</p> <p>If the URL is correct, verify that an active Internet connection is available.</p>
<b>1621</b>	Failed to verify signature of file <filename>.	<p>The file was downloaded, but the signature could not be verified. The file might be corrupted, it might have been signed by a different company than originally signed it, or it might not be signed.</p> <p>Verify that the file Wintrust.dll exists on the target system.</p>
<b>1627</b>	Unable to save file: <filename>.	Ensure that the specified file does not already exist, and that the target system has sufficient hard drive space.
<b>1628</b>	Failed to complete script based install.	 <p><b>Project</b> • This is applicable to InstallScript MSI projects.</p>
<b>1629</b>	Invalid command line.	Double-check the command-line statement used to launch Setup.exe.
<b>1641</b>	The installation was successful and it required a restart.	 <p><b>Project</b> • This is applicable to InstallScript MSI projects.</p> <p>If the Windows Installer engine returns ERROR_SUCCESS (0), the Setup.exe file may return ERROR_SUCCESS_REBOOT_INITIATED (1641). This return value occurs if the installation itself is restarting the machine because the <b>System</b> function was called—typically as a result of the <b>SdFinishReboot</b> function calling <b>System</b> internally.</p>
<b>1670</b>	Unable to load module [1], Error Code: [2]	<p>[1] is the full path to the .dll file that the installation is attempting to load (ISSetup.dll in all cases).</p> <p>[2] is the Windows error returned from <b>LoadLibrary0</b>.</p> <p>This error occurs if ISSetup.dll is not in the Disk1 folder. It also may occur if ISSetup.dll is compressed in Setup.exe if a compressed media is being built.</p> <p>To resolve this error, try rebuilding the release.</p>

**Table 9** • Setup.exe Run-time Errors and Return Values (cont.)

Error or Status Number	Message	Troubleshooting Tips
<b>1700</b>	An error occurred initializing the InstallScript engine.	 <p><b>Project</b> ▪ This is applicable to InstallScript MSI projects.</p> <p>This error indicates that a problem occurred when the InstallScript engine was being loaded.</p>
<b>1701</b>	Unable to extract InstallScript engine support files to temp location.	 <p><b>Project</b> ▪ This is applicable to InstallScript MSI projects.</p> <p>This error occurs if one or more files could not be extracted from the ISSetup.dll file to a temporary directory.</p> <p>To troubleshoot this error, create a Windows Installer log file to obtain more information. The log file has the corresponding Windows error number and other diagnostic information that may help troubleshoot this issue.</p>
<b>1919</b>	Error configuring ODBC data source. Verify that the file exists and that you can access it.	<p>Machines running Windows 95 do not have the ODBC core. You need to install MDAC before installing any package with an ODBC driver.</p>
<b>3010</b>	The installation was successful and a restart is required to complete the installation.	 <p><b>Project</b> ▪ This is applicable to InstallScript MSI projects.</p> <p>If the Windows Installer engine returns ERROR_SUCCESS (0), the Setup.exe file may return ERROR_SUCCESS_REBOOT_REQUIRED (3010). This indicates that installation required a restart but the installation is not initiating the restart. In this case, the installation completed with BATCH_INSTALL set to a non-zero value, but the <b>System</b> function was not called.</p>

## Setup.exe Return Values and Run-Time Errors (Advanced UI and Suite/Advanced UI Projects)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The table below lists the errors that might occur when an end user runs an Advanced UI or Suite/Advanced UI Setup.exe installation. The Type of Code column in this table indicates the following information:

- **Exit code only**—The installation status is returned by the Advanced UI or Suite/Advanced UI Setup.exe file.
- **Error code/exit code**—The installation status is processed for evaluated error conditions, and the status is returned by the Advanced UI or Suite/Advanced UI Setup.exe file.
- **Logged only**—The installation status is logged when debug logging is enabled. (Debug logging is enabled when the /debuglog command-line parameter is passed to the Advanced UI or Suite/Advanced UI Setup.exe file to launch the Advanced UI or Suite/Advanced UI installation. For more information on command-line parameters, see [Advanced UI and Suite/Advanced UI Setup.exe Command-Line Parameters](#).)

**Note** ▪ Some of the error messages may be displayed before any string entries are available to the running Advanced UI or Suite/Advanced UI Setup.exe file. Therefore, in such cases (for example, Setup.xml is missing, another instance of the Advanced UI or Suite/Advanced UI installation is already running, or condition validation failed), those particular resulting error messages are displayed in English. Other errors that occur before language selection are typically displayed in the default setup language.

**Table 10** ▪ Setup.exe Run-time Errors and Return Values

Status Code	Type of Code	Message	Troubleshooting Tips
0x80040701	Exit code only	Failed to read or initialize setup state information; missing SuiteId attribute on setup.xml setup element. Contact your vendor for assistance.	<p>The value of the SuiteId attribute in the Setup.xml file indicates the Suite GUID, as defined in the General Information view of the project. If this GUID is somehow removed from the Setup.xml file, this error may occur at run time.</p> <p>To resolve this error, try rebuilding the Advanced UI or Suite/Advanced UI installation.</p>
0x80040702	Exit code only	No UI DLL was loaded and initialized, possibly due to a missing UI resource. Contact your vendor for assistance.	This exit code occurs if the UIResource definition in the project or the Setup.xml file is missing or invalid (for example, for a corrupted project).

**Table 10** • Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x80040705</b>	<b>Exit/error code</b>	MD5 check failed for the current file to be staged. The file may be corrupted.	<p>An Advanced UI or Suite/Advanced UI installation uses MD5 checks the integrity of the packages in the Advanced UI or Suite/Advanced UI installation. If the MD5 check fails, this error occurs.</p> <p>To resolve this error, try rebuilding the Advanced UI or Suite/Advanced UI installation.</p>
<b>0x80040706</b>	<b>Exit code only</b>	No setup.xml file was found in the running suite setup. Contact your vendor for assistance.	This status code occurs if the Setup.xml resource could not be found.
<b>0x80040707</b>	<b>Logged only</b>	Failed to extract a file that is necessary to run this setup. Contact your vendor for assistance.	The log includes this status code if a resource that is listed in the Resources section of the Setup.xml file could not be extracted from the running Advanced UI or Suite/Advanced UI Setup.exe file. Check for build errors and the Support Files view for missing resources, and add them as needed.
<b>0x80040708</b>	<b>Logged only</b>	Failed to copy or download a file that is necessary to run this setup. Contact your vendor for assistance.	The log includes this status code if a resource that is listed in the Resources section of the Setup.xml file could not be copied or downloaded. Check for build errors and the Support Files view for missing resources, and add them as needed.
<b>0x80040709</b>	<b>Error code only</b>	Failed to extract a file while staging. Either the file is not present in the stream or the file could not be written to the target machine.	This error occurs if the Advanced UI or Suite/Advanced UI installation fails to stage a file that is streamed into the Advanced UI or Suite/Advanced UI Setup.exe file. Either the installation is corrupted or the file was missing at build time.

**Table 10** ▪ Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x8004070A</b>	<b>Exit/error code</b>	The setup password is incorrect or was not entered. The setup cannot proceed.	<p>The Setup.exe tab for a release in the Releases view of an Advanced UI or Suite/Advanced UI project lets you specify whether you want to password protect the setup launcher; if you do, you can also specify the password that end users need to enter in order to run the installation.</p> <p>This error occurs if there is no prompt for a password from the user interface during the preinstall phases of the installation. This can occur if a custom UI DLL is used and the end user tries to avoid the password prompt. This can also occur if an end user launches a password-protected Advanced UI or Suite/Advanced UI installation silently from the command line but does not include a password on the command line.</p>
<b>0x8004070B</b>	<b>Exit/error code</b>	The setup command line is invalid. The setup cannot proceed.	<p>This error occurs if you pass an invalid command-line parameter to the Advanced UI or Suite/Advanced UI Setup.exe file while launching it from the command line.</p> <p>For a list of valid command-line parameters, see <a href="#">Advanced UI and Suite/Advanced UI Setup.exe Command-Line Parameters</a>.</p>
<b>0x8004070C</b>	<b>Exit/error code</b>	The setup could not start in a temporary folder. Contact your vendor for assistance.	This error occurs if the Temp folder on the target system is full. To resolve this error, consider freeing space in the Temp folder.

**Table 10** ▪ Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x8004070D</b>	<b>Exit/error code</b>	The destination folder that was entered for a staging-only operation could not be created.	<p>When you are running an Advanced UI or Suite/Advanced UI installation with the /stage_only command-line parameter, the Advanced UI or Suite/Advanced UI installation attempts to copy its packages to a directory that is specified by the user. The directory must exist; if it does not, the installation encounters this error.</p> <p>To resolve this error, ensure that the path that you specify on the BrowseStageFolder wizard page exists. If it does not, create it and then rerun the installation.</p>
<b>0x8004070E</b>	<b>Exit/error code</b>	An unknown failure occurred attempting to cache a file from either a remote server or a local path. Contact your vendor for assistance.	<p>If the file is located on a Web server, ensure that it is available on the machine where the installation is encountering this error. If the file is located on source media, ensure that the source media is available and valid. Check a debug log for any additional information that might be available.</p>
<b>0x8004070f</b>	<b>Exit/error code</b>	An invalid condition was encountered while parsing setup.xml. Create a debug log to see if further information is available. The condition needs to be corrected in the IDE for the suite to launch successfully.	<p>This error occurs if an invalid condition was configured.</p> <p>To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p> <p>To resolve this error, edit the invalid condition in your Advanced UI or Suite/Advanced UI project.</p>

**Table 10** • Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x80040710</b>	<b>Error Code</b>	The setup was aborted because the suite requirements defined in abort conditions were not met.	This error occurs if the exit conditions that were defined in the General Information view were not met at run time on the target system. If this is unexpected, you may need to modify your exit conditions. To learn more, see <a href="#">Defining Exit Conditions for an Advanced UI or Suite/Advanced UI Installation</a>
<b>0x80040711</b>	<b>Exit/error code</b>	Another instance of the suite installation is already running. Please wait for the other instance to finish and then try again.	Only one instance of an Advanced UI or Suite/Advanced UI installation can run on a target system at a time.
<b>0x80040712</b>	<b>Exit/error code</b>	Failed to load ISSetup.dll to launch an InstallScript parcel.	<p>This error may occur if one or more of the files for an InstallScript package that is included in the project are not available to InstallShield at build time.</p> <p>To resolve this error, ensure that all of the files in your InstallScript package are available at build time.</p>
<b>0x80040713</b>	<b>Exit/error code</b>	Failed to call ISSetup.dll to launch an InstallScript parcel. Ensure the InstallScript setup contained in the parcel was built with a version of InstallShield that supports InstallScript parcels.	<p>This error may occur if you include in your project an InstallScript package that was built in InstallShield 2012 Spring or later. For additional requirements, see <a href="#">Adding an InstallScript Package to an Advanced UI or Suite/Advanced UI Project</a>.</p>
<b>0x80040714</b>	<b>Exit/error code</b>	Failed to launch EXE. This error can occur when attempting to launch EXE actions, elevated EXE parcels, or Windows Features support on Windows Vista, 2008, 7, or 2008 R2 and the EXE fails to launch. Check a debug log as this may contain more detailed error information.	To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a> .

**Table 10** ▪ Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x80040715</b>	<b>Exit/error code</b>	Failed to load DLL. This error can occur when attempting to load a DLL for DLL actions or Windows Features support on Windows 8 or newer versions of Windows. Check a debug log as this may contain more detailed error information.	<p>This error may occur if the file that a DLL action in your project needs to call is missing or could not be loaded. This may also occur if the installation is attempting to enable Windows roles or features on a target system.</p> <p>To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>0x80040716</b>	<b>Exit/error code</b>	Failed to locate or load support files needed to run a PowerShell action. Check a debug log as this may contain more detailed error information.	<p>This error may occur if the file that a PowerShell action in your project needs to call is missing or could not be loaded.</p> <p>To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>0x80040718</b>	<b>Exit/error code</b>	Failed to call InstallScript function in InstallScript action. Check a debug log as this may contain more detailed error information.	<p>This error occurs because the installation could not call an InstallScript function in an InstallScript action.</p> <p>To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>0x8004071A</b>	<b>Error code</b>	The path specified for a suite debug log does not exist or is invalid. Specify a valid file path when passing /debuglog with a file path. The suite error returned in this case is 1622.	Ensure that you specify a valid path for the debug log file.

**Table 10** ▪ Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x8004071B</b>	<b>Exit/error code</b>	A resource required to install a web deploy parcel was not found. Rebuild the setup and try again.	<p>This error may occur if the file that a Web Deploy package in your project requires is missing.</p> <p>To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>0x8004071C</b>	<b>Exit/error code</b>	A resource required to call a CLR action is missing or failed to load. Check a debug log as this may contain more detailed error information.	<p>This error may occur if the file that a managed-code action in your project needs to call is missing or could not be loaded.</p> <p>To troubleshoot this error, check the debug log file for additional information. To learn more, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>0x8007007f</b>	<b>Error code only</b>	The specified procedure could not be found.	<p>This error is system error 127.</p> <p>This error may occur if the Advanced UI or Suite/Advanced UI installation is run on a system that does not meet the minimum requirements for Windows Installer:</p> <ul style="list-style-type: none"> <li>● To run an Advanced UI or Suite/Advanced UI installation on a target system, the target system must have Windows Installer 3.1 or later. To avoid this error on these systems, you may want to create an exit condition that prevents the entire Advanced UI or Suite/Advanced UI installation from running on systems that do not have Windows Installer 4.5 or later. To learn more, see <a href="#">Defining Exit Conditions for an Advanced UI or Suite/Advanced UI Installation</a>.</li> </ul>

**Table 10** ▪ Setup.exe Run-time Errors and Return Values (cont.)

Status Code	Type of Code	Message	Troubleshooting Tips
<b>0x8007007f</b> (cont.)			<ul style="list-style-type: none"> <li>If the Advanced UI or Suite/Advanced UI installation contains packages that run with transaction processing, the target system must have Windows Installer 4.5 or later. To avoid this error on these systems, you may want to create an eligibility condition for each package in the transaction to prevent the Advanced UI or Suite/Advanced UI installation from launching those packages on systems that have earlier versions of Windows Installer. For more information, see <a href="#">Building Conditional Statements in Advanced UI and Suite/Advanced UI Projects</a>.</li> </ul> <p>This error may also occur if the Advanced UI or Suite/Advanced UI installation has trouble installing an InstallScript package because the package was built in InstallShield 2012 or earlier. For more information, see <a href="#">Adding an InstallScript Package to an Advanced UI or Suite/Advanced UI Project</a>.</p> <p>In addition, this error may occur if there is a problem with an Advanced UI or Suite/Advanced UI extension condition. If your project includes an extension condition, check to ensure that the DLL for the extension condition has the proper exported entry points.</p>

## Visual Studio Project Import Errors and Warnings

This table lists the errors and warnings that might occur when you do any of the following:

- Convert a Visual Studio setup project (.vdproj) to an InstallShield Basic MSI project (.ism).

- Convert a Visual Studio merge module project (.vdproj) to an InstallShield Merge Module project (.ism).
- Import a Visual Studio setup or merge module project (.vdproj) into an InstallShield Basic MSI or Merge Module project (.ism).

**Table 11** • Visual Studio Project Import Errors and Warnings

Error or Warning Number	Message	Troubleshooting Tips
<b>-9000</b>	An unknown exception occurred.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-9001</b>	An unknown COM exception occurred.	Check the <a href="#">Knowledge Base</a> for information about this error, or request <a href="#">technical support</a> .
<b>-9002</b>	An error occurred while loading the project %1.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9003</b>	An error occurred while creating the project %1.	<p>This error occurs if InstallShield cannot create a Basic MSI project from the Visual Studio setup project or a Merge Module project from the Visual Studio merge module project. InstallShield tries to create the project in the same folder that contains the Visual Studio project file (.vdproj).</p> <p>To resolve this error, see if the folder that contains the Visual Studio project file is read-only, and change it to writable.</p>
<b>-9004</b>	An error occurred while saving the project %1.	<p>This error occurs if InstallShield cannot create a Basic MSI project from the Visual Studio setup project or a Merge Module project from the Visual Studio merge module project. InstallShield tries to save the project in the same folder that contains the Visual Studio project file (.vdproj).</p> <p>To resolve this error, see if the folder that contains the Visual Studio project file is read-only, and change it to writable.</p>
<b>-9005</b>	An error occurred while converting the project.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9006</b>	An error occurred while determining the project type.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9007</b>	An error occurred while parsing the section '%1'.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9008</b>	No open brace found for the section %1 under %2.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9009</b>	No close brace found for the section %1 under %2.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9010</b>	An invalid entry %1 found in the section %1 under %2.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9011</b>	An error occurred while adding the property %1 to the section %2.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9012</b>	An error occurred while adding the section %1 to the section %2.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9013</b>	The section %1 does not exist.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9014</b>	An error occurred while converting the product properties.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9015</b>	An error occurred while converting the files.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9016</b>	The file type %1 is invalid. The file %2 was not converted.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9017</b>	An error occurred while converting the file %1. Type: %2	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9018</b>	An error occurred while converting the features.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9019</b>	An error occurred while converting the feature %1.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9020</b>	An error occurred while converting the folders.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9021</b>	An error occurred while converting the folder %1. Type: %2	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9022</b>	The folder type %1 is invalid. The folder %2 was not converted.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9023</b>	An error occurred while converting the custom actions.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9024</b>	An error occurred while converting the custom action %1. Type: %2	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9025</b>	The custom action type %1 is invalid. The custom action %2 was not converted.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9026</b>	A component for the source file %1 of the custom action %2 was not found.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9027</b>	An error occurred while converting the file types.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9028</b>	An error occurred while converting the file extension %1. Type: %2	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9029</b>	The file extension type %1 is invalid. The file extension %2 was not converted.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9030</b>	An error occurred while converting the verb %1. Type: %2	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9031</b>	The verb type %1 is invalid. The verb %2 was not converted.	This error may occur if the Visual Studio project file is corrupted or if InstallShield cannot correctly read the Visual Studio project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9032</b>	A command is not specified for the file extension %1. The file extension was not converted.	<p>This warning occurs if the Command property for the specified file type was left blank in the File Types Editor in Visual Studio. The warning alerts you that InstallShield could not configure the file extension during the conversion process.</p> <p>To resolve this issue, specify a command for the file type in Visual Studio, and then convert the Visual Studio setup project to an InstallShield project. Otherwise, you can add and configure the file extension in the File Types area of the Components view in InstallShield.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9033</b>	A component for the command %1 of the file extension %2 not found. The file extension was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9034</b>	An error occurred while converting the registries.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9035</b>	An error occurred while converting the registry key %1. Type: %2	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9036</b>	The registry key type %1 is invalid. The registry key %2 was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9037</b>	An error occurred while converting the registry value %1. Type: %2	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9038</b>	The registry value type %1 is invalid. The registry value %2 was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9039</b>	An error occurred while converting the shortcuts.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9040</b>	An error occurred while converting the shortcut %1. Type: %2	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9041</b>	The shortcut type %1 is invalid. The shortcut %2 was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9042</b>	The shortcut target %1 is invalid. The shortcut %2 was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9043</b>	An error occurred while converting the launch conditions.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9044</b>	An error occurred while converting the launch condition %1. Type: %2	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9045</b>	The launch condition type %1 is invalid. The launch condition %2 was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9046</b>	An error occurred while converting the locators.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9047</b>	An error occurred while converting the locator %1. Type: %2	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9048</b>	The locator type %1 is invalid. The locator %2 was not converted.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .
<b>-9049</b>	An error occurred while converting the product icon.	This error may occur if the Visual Studio setup or merge module project file is corrupted or if InstallShield cannot correctly read the Visual Studio setup project file. To resolve this error, request <a href="#">technical support</a> .

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9050</b>	The project language '%1' is not installed in InstallShield. The language was not converted.	<p>This warning occurs if you convert a Visual Studio project that includes support for a language, but InstallShield does not have built-in support for that language.</p>  <p><b>Edition</b> • The Premier edition of InstallShield includes multilanguage support, but the InstallShield does not.</p>
<b>-9052</b>	File type '%1' specifies no extensions. The file type was not converted.	<p>This warning occurs if the Extensions property for the specified file type was left blank in the File Types Editor in Visual Studio. The warning alerts you that InstallShield could not configure the file extension during the import or conversion process.</p> <p>To resolve this issue, specify one or more file extensions for the file type in Visual Studio, and then convert or import the Visual Studio project into an InstallShield project. Otherwise, you can add and configure the file extension in the Advanced Settings area of the Components view in InstallShield after you have converted or imported the Visual Studio project.</p>
<b>-9053</b>	Launch condition '%1' specifies no conditions. The launch condition was not converted.	<p>This warning occurs if the Condition property for the specified launch condition was left blank in the Launch Conditions Editor in Visual Studio. The warning alerts you that InstallShield could not configure the launch condition during the import or conversion process.</p> <p>To resolve this issue, specify a condition in Visual Studio, and then convert or import the Visual Studio project into an InstallShield project. Otherwise, you can add and configure the launch condition in the General Information view in InstallShield after you have converted or imported the Visual Studio project.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9054</b>	File search '%1' specifies no file names. The file search was not converted.	<p>This warning occurs if the FileName property for the specified file search was left blank in the Launch Conditions Editor in Visual Studio. The warning alerts you that InstallShield could not configure the file search during the import or conversion process.</p> <p>To resolve this issue, specify the file name for the file search in Visual Studio, and then convert or import the Visual Studio project into an InstallShield project. Otherwise, you can add and configure the file search in the System Search view in InstallShield after you have converted or imported the Visual Studio project.</p>
<b>-9055</b>	Feature '%1' already exists in the InstallShield project. The feature was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular feature and you import that project into an InstallShield project that already contains that feature. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p>
<b>-9056</b>	Directory '%1' already exists in the InstallShield project. The folder '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular folder and you import that project into an InstallShield project that already contains that folder. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Files and Folders view to ensure that the folder that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9057</b>	File key '%1' already exists in the InstallShield project. The file '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a file that is associated with a particular file key and you import that project into an InstallShield project that already contains a file with that same file key. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Files area of the Components view to ensure that the file that is identified in the warning message is not missing from your InstallShield project.</p> <p>Note that the Direct Editor view shows the file key that is associated with each file in your project. The file keys are the primary keys of the File table in the .msi database; the File table cannot contain duplicate file keys.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9058</b>	Shortcut key '%1' already exists in the InstallShield project. The shortcut '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a shortcut that is associated with a particular shortcut key and you import that project into an InstallShield project that already contains a shortcut with that same shortcut key. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Shortcuts view to ensure that the shortcut that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9059</b>	Extension '%1' already exists in the InstallShield project. The file type '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular file extension and you import that project into an InstallShield project that already contains that same file extension. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Advanced Settings area of the Components view to ensure that the file extension that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9060</b>	Registry key '%1' already exists in the InstallShield project. The registry entry 'Key: %2 Value: %3 Data: %4' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular registry entry and you import that project into an InstallShield project that already contains that same registry entry. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Registry view to ensure that the registry entry that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9061</b>	Custom action '%1' already exists in the InstallShield project. The custom action named '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular custom action and you import that project into an InstallShield project that already contains a custom action with that same name. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Custom Actions and Sequences view to ensure that the custom action that is identified in the warning message is not missing from your InstallShield project.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9062</b>	Launch condition '%1' already exists in the InstallShield project. The launch condition named '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular launch condition and you import that project into an InstallShield project that already contains a launch condition with that same name. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Install Condition setting in the General Information view to ensure that the launch condition that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9063</b>	RegLocator '%1' already exists in the InstallShield project. The registry search '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular registry search and you import that project into an InstallShield project that already contains a registry search with that same name. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the System Search view to ensure that the registry search that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9064</b>	DrLocator '%1' already exists in the InstallShield project. The file search '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular file or folder search and you import that project into an InstallShield project that already contains a file or folder search with that same name. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the System Search view to ensure that the file or folder search that is identified in the warning message is not missing from your InstallShield project.</p>
<b>-9065</b>	CompLocator '%1' already exists in the InstallShield project. The Windows Installer search '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a particular file or folder search and you import that project into an InstallShield project that already contains a file or folder search with that same name. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the System Search view to ensure that the file or folder search that is identified in the warning message is not missing from your InstallShield project.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9070</b>	An error occurred while converting the prerequisites.	<p>This error occurs if you import a Visual Studio setup project that contains a prerequisite but InstallShield encounters a problem when trying to map the Visual Studio prerequisite to an equivalent InstallShield prerequisite.</p> <p>To resolve this error, request <a href="#">technical support</a>, or consider creating an InstallShield prerequisite that installs the required redistributable, and add that InstallShield prerequisite to your project. For more information, see <a href="#">Defining InstallShield Prerequisites</a> and <a href="#">Working with InstallShield Prerequisites that Are Included in Installation Projects</a>.</p>
<b>-9071</b>	InstallShield has no equivalent InstallShield prerequisite for '%1'. The prerequisite was not converted.	<p>This warning occurs if you import a Visual Studio setup project that contains a prerequisite but InstallShield does not have an equivalent InstallShield prerequisite.</p> <p>To resolve this warning, consider creating an InstallShield prerequisite that installs the required redistributable, and add that InstallShield prerequisite to your project. For more information, see <a href="#">Defining InstallShield Prerequisites</a> and <a href="#">Working with InstallShield Prerequisites that Are Included in Installation Projects</a>.</p>
<b>-9074</b>	An error occurred while converting the project outputs.	<p>This error occurs if you convert a Visual Studio setup or merge module project that contains one or more project outputs but InstallShield encounters a problem when incorporating the project outputs into the InstallShield project.</p> <p>To resolve this error, request <a href="#">technical support</a>.</p>
<b>-9075</b>	An error occurred while converting the project output %1. Type: %2	<p>This error occurs if you convert a Visual Studio setup or merge module project that contains one or more project outputs but InstallShield encounters a problem when incorporating the project outputs into the InstallShield project.</p> <p>To resolve this error, request <a href="#">technical support</a>.</p>
<b>-9076</b>	The project output type %1 is invalid. The project output %2 was not converted.	<p>This error occurs if you convert a Visual Studio setup or merge module project that contains one or more project outputs but one of the project outputs is invalid.</p> <p>To resolve this error, review the project output in your Visual Studio project, and try to resolve any issues with it. Then convert the Visual Studio project to an InstallShield project.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9077</b>	File key '%1' already exists in the InstallShield project. The project output '%2' was not converted.	<p>This warning occurs if you have a Visual Studio project that contains a project output that has a file that is associated with a particular file key, and you import that project into an InstallShield project that already contains a file with that same file key. This scenario may occur if you import the same Visual Studio project into your InstallShield project more than once.</p> <p>If you encounter this warning, check the Files and Folders view to ensure that the file that is identified in the warning message is not missing from your InstallShield project.</p> <p>Note that the Direct Editor view shows the file key that is associated with each file in your project. The file keys are the primary keys of the File table in the .msi database; the File table cannot contain duplicate file keys.</p>
<b>-9078</b>	The InstallShield project is not in a Visual Studio solution. The project output '%1' was not converted.	<p>This error occurs if your InstallShield project is open in InstallShield, but not from within Visual Studio, and you try to import a Visual Studio project that contains project outputs into the InstallShield project.</p> <p>To resolve this error, open your InstallShield project from within Visual Studio, and then import the Visual Studio project into it.</p>
<b>-9079</b>	The Visual Studio project '%1' could not be found in the current Visual Studio solution. The project output '%2' was not converted.	<p>If you want to import into an InstallShield project a Visual Studio setup or merge module project that contains a project output, the Visual Studio project must be in the same solution as all of its project dependencies. Otherwise, this error occurs when you try to import the Visual Studio project.</p> <p>To resolve this error, ensure that your InstallShield project is in the same Visual Studio solution that contains the Visual Studio setup or merge module project that you are importing. In addition, ensure that the solution also includes all of the other Visual Studio projects that are dependencies of the Visual Studio setup or merge module project. Then you can import the Visual Studio setup or merge module project into your InstallShield project.</p>
<b>-9080</b>	The project output group '%1' could not be found in the Visual Studio project '%2'. The project output '%3' was not converted.	<p>This error occurs if you convert a Visual Studio setup or merge module project that contains a project output group but InstallShield encounters a problem when incorporating a project output of that group into the InstallShield project.</p> <p>To resolve this error, request <a href="#">technical support</a>.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9081</b>	File '%1' is specified to be excluded from a setup or merge module. The file was not converted.	<p>This warning occurs if you import into an InstallShield project a Visual Studio setup or merge module project that contains a file whose Exclude property is set to True.</p> <p>If you want the specified file to be excluded from your InstallShield project, you can ignore this warning.</p> <p>If you want the specified file to be included in your InstallShield project, you can use the Files and Folders view in InstallShield to add it. For more information, see <a href="#">Adding to Your Project Files to Be Installed on Target Systems</a>.</p>
<b>-9082</b>	Project output '%1' is specified to be excluded from a setup or merge module. The project output was not converted.	<p>This warning occurs if you import into an InstallShield project a Visual Studio setup or merge module project that contains a file in a project output, and True is selected for the Exclude property of that file.</p> <p>If you want the specified file to be excluded from your InstallShield project, you can ignore this warning.</p> <p>If you want the specified file to be included in your InstallShield project, you can use the Files and Folders view in InstallShield to add it. For more information, see <a href="#">Adding References to Visual Studio Solutions</a>.</p>
<b>-9083</b>	Visual Studio default launch conditions are not supported in InstallShield. The launch condition named '%1' was not converted.	<p>This warning occurs if you import into InstallShield project a Visual Studio setup or merge module project that contains a default launch condition.</p> <p>If you want the specified launch condition to be excluded from your InstallShield project, you can ignore this warning.</p> <p>If you want to add a launch condition to your InstallShield project to check the target system for the default launch condition that Visual Studio added to the original project, you can use the System Search view in InstallShield to add it. For more information, see <a href="#">Adding a System Search</a>.</p>

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-9086</b>	MinDate '%1' for the file search named '%2' is not valid. The MinDate property was not converted.	<p>This warning occurs if you attempt to import or convert a Visual Studio setup that has a file search with an invalid value for the MinDate property.</p> <p>To resolve this warning:</p> <ol style="list-style-type: none"> <li>1. Open the <b>System Search</b> view in InstallShield.</li> <li>2. Right-click the file search and then click <b>Modify</b>. The <b>System Search Wizard</b> opens.</li> <li>3. On the second panel of this wizard, click the <b>Details</b> button. The <b>File Details</b> dialog box opens.</li> <li>4. Enter the appropriate details.</li> </ol>
<b>-9087</b>	MaxDate '%1' for the file search named '%2' is not valid. The MaxDate property was not converted.	<p>This warning occurs if you attempt to import or convert a Visual Studio setup that has a file search with an invalid value for the MaxDate property.</p> <p>To resolve this warning:</p> <ol style="list-style-type: none"> <li>1. Open the <b>System Search</b> view in InstallShield.</li> <li>2. Right-click the file search and then click <b>Modify</b>. The <b>System Search Wizard</b> opens.</li> <li>3. On the second panel of this wizard, click the <b>Details</b> button. The <b>File Details</b> dialog box opens.</li> <li>4. Enter the appropriate details.</li> </ol>
<b>-9088</b>	InstallShield does not have support for converting Visual Studio Web Setup projects into InstallShield projects.	This error occurs if you attempt to import or convert a Visual Studio Web setup project in InstallShield, since InstallShield does not have support for this conversion. If you encounter this type of error, consider creating a new project in InstallShield and using the Internet Information Services view to manage an IIS Web site on a target system.
<b>-9089</b>	InstallShield does not have support for converting Visual Studio CAB projects into InstallShield projects.	This error occurs if you attempt to import or convert a Visual Studio CAB setup project in InstallShield, since InstallShield does not have support for this conversion.
<b>-9090</b>	The Visual Studio project type could not be identified. Therefore, the project was not converted.	This error occurs if you attempt to attempt to import or convert a Visual Studio project type that InstallShield could not identify.

**Table 11** • Visual Studio Project Import Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
-10000	Conversion canceled by user.	This error occurs if you cancel the conversion process before it finishes.

## Upgrade Errors (Upgrading from InstallShield Professional)

This table provides tips for troubleshooting errors that may occur when you upgrade a project (.ism file) created with InstallShield Professional to InstallShield.

**Table 12** • Tips for Troubleshooting Upgrade Errors

Error Number	Message	Troubleshooting Tips
-61	Could not extract the InstallShield Professional project version. Version 5.5 is assumed.	Make sure the project you are trying to convert is InstallShield Professional version 5.5 or later. If your setup was created using an earlier version of InstallShield Professional, visit the <a href="#">Support Web site</a> for help.
-62	Could not find key LanguageSupport under section [Language] in file <FileName>	The languages your InstallShield Professional setup support could not be determined. You need to define the supported languages manually.
-63	Could not find key ProductName under section [Data] in file <FileName>	The name of your InstallShield Professional project could not be determined. You need to enter this information manually in the Subject field of the Summary Information Stream.
-64	Could not find key Author under section [Data] in file <FileName>	The name of the InstallShield Professional setup could not be determined. You need to manually enter this information in the Author field of the Summary Information Stream.
-65	Could not find key Version under section [Data] in file <FileName>	The version of your setup project could not be determined. You must manually enter this information in the Product Version setting of the General Information view.
-66	Could not find key HomeUrl under section [Data] in file <FileName>	The URL for your application could not be determined. You need to enter this information in one or all of the following settings in the General Information view: Publisher/Product URL, Support URL, and Product Update URL.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-67</b>	Could not find key CompanyName under section [Data] in file <FileName>	Your Company Name could not be read from the InstallShield Professional project file. You need to manually enter this information in the Publisher setting in the General Information view.
<b>-68</b>	Could not find key InstallationGuid under section [Data] in file <FileName>	The GUID of your installation could not be determined. A new GUID has been created for you in the Product Code setting in the General Information view. If you have the original GUID for your setup, you can overwrite the new GUID generated for you.
<b>-69</b>	Could not find key CurrentFileGroupDef under section [Data] in file <FileName>	A reference to your project's file groups could not be found. Verify your InstallShield Professional's file group settings, save your project, and try upgrading your project again.
<b>-70</b>	Could not find key CurrentComponentDef under section [Data] in file <FileName>	A reference to your project's components could not be found. Verify your InstallShield Professional project's component settings, save your project, and try upgrading your project again.
<b>-79</b>	Could not find key Platforms under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-80</b>	Could not find key Password under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-81</b>	Warning: The Copyright, Department, Email, and Summary settings are not used.  Warning: The Descriptions.txt, Instructions.txt, and Notes.txt files are not used.  Warning: Use the Source Control option in the Project menu to add your project to source control.	The your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore these warnings.
<b>-82</b>	Could not find key RunDebug under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-241</b>	Could not find key SELFREGISTERING under section <FileGroupName> in file <FileName>	Error determining if your file groups are self-registering. By default, your new components created from this file group are not marked as self-registering. You can change this setting in the property page for the appropriate component.
<b>-242</b>	Could not find key TARGET under section <FileGroupName> in file <FileName>	The Target directory of one of your file groups could not be determined. The component or components created from this file group point to <INSTALLDIR> by default. You can change this setting in the appropriate component's Destination property.
<b>-243</b>	Could not find key LANGUAGE under section <FileGroupName> in file <FileName>	The target languages for one of your file groups could not be determined. The component created from this file group will be language independent. You can change this setting in the appropriate component's Languages property.
<b>-244</b>	Could not find key FOLDER under section [DYNAMIC] in file <FileName>	A reference to your dynamic file links could not be found for one of your file groups. As a result, none of the files referenced by that dynamic link were migrated. You can either open your InstallShield Professional project and verify your dynamic link settings, or manually add these files to your new project.
<b>-245</b>	Could not find key INCLUDESUBDIR under section [DYNAMIC] in file <FileName>	It could not be determined if subfolders were to be included as part of your dynamic link for one of your file groups. As a result, no subfolders are included in your new project. You can either open your InstallShield Professional project and verify your dynamic link settings, or manually add these files to your new project.
<b>-246</b>	Could not find key WILDCARD under section [DYNAMIC] in file <FileName>	The wildcards you specified for one of your dynamic links could not be read. As a result, all files included in the dynamic link's specified directory were added to your setup. You can either open your InstallShield Professional project and verify your dynamic link settings, or manually remove unwanted files from your new project.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-247</b>	Could not find key FILETYPE under section <SectionName> in file <Path>\Default.fdf	It could not be determined if one of your file groups was marked as shared. As a result, the components created from that file group are not marked as shared. To change this setting, change the appropriate component's Shared property to Yes.
<b>-252</b>	Could not find key Folder under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-281</b>	Error opening file <Path>\Default.fdf	A reference to your file groups could not be found. Verify your file group settings in your InstallShield Professional project, save, and open your project in InstallShield 2021 again.
<b>-282</b>	Error Opening file: <FileName>	The upgrade could not locate one of your file groups. Therefore, no files associated with that file group were added to your setup. Verify your file group settings in your InstallShield Professional project, save, and open your project in InstallShield 2021 again.
<b>-283</b>	Could not find section [FILEGROUPS] in file <Path>\Default.fdf	A reference to your file groups could not be found. Verify your file group settings in your InstallShield Professional project, save, and open your project in InstallShield 2021 again.
<b>-284</b>	Could not find section <SectionName> in file <Path>\Default.fdf	One of your file groups could not be found. As a result, none of the files associated with that file group were added to your project. Verify your file group settings in your InstallShield Professional project, save, and open your project in InstallShield 2021 again.
<b>-285</b>	Could not find key FILETYPE under section <SectionName> in file <Path>\Default.fdf	InstallShield could not determine if the files for one of your file groups was linked to dynamically or statically. As a result, none of that file group's files were added to your setup. Verify your file group settings in your InstallShield Professional project, save, and open your project in InstallShield again.
<b>-286</b>	Could not find section [DYNAMIC] in file <FileName>	InstallShield could not determine if the files for one of your file groups was linked to dynamically or statically. As a result, none of that file group's files were added to your setup. Verify your file group settings in your InstallShield Professional, save, and open your project in InstallShield again.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-301</b>	Could not find key DESCRIPTION under section <SectionName> in file <Path>\Default.cdf	The Description property for one of your components could not be read. Enter this information manually in the Description property for the feature created from your component.
<b>-302</b>	Could not find key DISPLAYTEXT under section <SectionName> in file <Path>\Default.cdf	The display name for one of your components could not be read. Enter this information manually in the Display Name property for the feature created from your component.
<b>-303</b>	Could not find key COMMENT under section <SectionName> in file <Path>\Default.cdf	The comments for one of your component could not be found. Enter this information manually in the Comments property of the appropriate component.
<b>-306</b>	Could not find key <KeyName> under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-341</b>	Error Opening file: <Path>\Default.cdf	There was an error importing your components. As a result, no features were created. Verify the component settings in your InstallShield Professional, save, and open your project in InstallShield again.
<b>-342</b>	Could not find section [COMPONENTS] in file <Path>\Default.cdf	There was an error importing your components. As a result, no features were created. Verify the component settings in your InstallShield Professional project, save, and open your project in InstallShield again.
<b>-343</b>	Could not find section <SectionName> in file <Path>\Default.cdf	There was an error importing one of your components. As a result, that component was not migrated. Verify the component settings in your InstallShield Professional project, save, and open your project in InstallShield again.
<b>-401</b>	Error opening file <Path>\Default.reg	The registry information associated with your InstallShield Professional project could not be read. As a result, no registry information was migrated. Verify the registry settings in your InstallShield Professional project, save, and open your project in InstallShield again.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-402</b>	Could not find section [DATA] in file <Path>\Default.re	The registry information associated with your InstallShield Professional project could not be read. As a result, no registry information was migrated. Verify the registry settings in your InstallShield Professional project, save, and open your project in InstallShield again.
<b>-403</b>	Could not find section <SectionName> in file <Path>\Default.re	A portion of your registry information could not be read. As a result, that registry data was not migrated. Verify the registry settings in your InstallShield Professional project, save, and open your project in InstallShield again.
<b>-404</b>	Could not find section <SectionName> in file <Path>\Default.re	A portion of your registry information could not be read. As a result, that registry data was not migrated. Verify the registry settings in your InstallShield Professional project, save, and open your project in InstallShield again.
<b>-421</b>	Could not find key TARGET under section <SectionName> in file <Path>\Default.shl	The target for one of your shortcuts could not be determined. Manually enter this information in the Target property of the appropriate shortcut.
<b>-422</b>	Could not find key ICONFILE under section <SectionName> in file <Path>\Default.shl	The icon for one of your shortcuts could not be determined. Manually enter this information in the Icon File property of the appropriate shortcut.
<b>-423</b>	Could not find key ICONINDEX under section <SectionName> in file <Path>\Default.shl	The icon index for one of your shortcuts could not be determined. Manually enter this information in the Icon Index property of the appropriate shortcut.
<b>-424</b>	Could not find key DISPLAYTEXT under section <SectionName> in file <Path>\Default.shl	The shortcut text for one of your shortcuts could not be determined. Manually enter this information in the Display Name property of the appropriate shortcut.
<b>-425</b>	Could not find key PARAMETERS under section <SectionName> in file <Path>\Default.shl	The arguments for one of your shortcuts could not be determined. Manually enter this information in the Arguments property of the appropriate shortcut.
<b>-426</b>	Could not find key SHORTCUTKEY under section <SectionName> in file <Path>\Default.shl	The shortcut key for one of your shortcuts could not be determined. Manually enter this information in the Hot Key property of the appropriate shortcut.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
<b>-427</b>	Could not find key STARTIN under section <SectionName> in file <Path>\Default.shl	The start in directory for one of your shortcuts could not be determined. Manually enter this information in the Working Directory property for the appropriate shortcut.
<b>-428</b>	Could not find key COMMENTS under section <SectionName> in file <Path>\Default.shl	The comments for one of your shortcuts could not be read. Manually enter this information in the Comments property for the appropriate shortcut.
<b>-429</b>	Could not find key RUN under section <SectionName> in file <Path>\Default.shl	The Run property of one of your shortcuts could not be read. This property will be set to Normal by default in the appropriate shortcut's Run property.
<b>-430</b>	Could not find key Type under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-431</b>	Could not find key Uninstall under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-432</b>	Could not find key DisplayText under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-433</b>	Could not find key Shared under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-434</b>	Could not find key Replace under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-435</b>	Could not find key InternetShortcut under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-440</b>	Could not find key EngineBinding under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
<b>-441</b>	Could not find key UpdateMode under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.

**Table 12** • Tips for Troubleshooting Upgrade Errors (cont.)

Error Number	Message	Troubleshooting Tips
-442	Could not find key UpdateService under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
-443	Could not find key LogFile under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
-461	Error opening file <Path>\Default.shl	The shell object information associated with your InstallShield Professional project could not be read. As a result, no shortcuts were created. Verify that the shell object settings in your InstallShield Professional project, save, and open the project in InstallShield again.
-462	Could not find section [DATA] in file <Path>\Default.shl	The shell object information associated with your InstallShield Professional project could not be read. As a result, no shortcuts were created. Verify that the shell object settings in your InstallShield Professional project, save, and open the project in InstallShield again.
-463	Could not find key <KeyName> under section [DATA] in file <Path>\Default.shl	One of your shortcuts could not be migrated. Manually create this shortcut in the Shortcuts explorer.
-464	Could not find section <SectionName> in file <Path>\Default.shl	One of your shortcuts could not be migrated. Manually create this shortcut in the Shortcuts explorer.
-471	Could not find section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.
-500	Could not find key <KeyName> under section <SectionName> in file <.ipr file>.	If your project was created with a version of InstallShield Professional earlier than InstallShield Professional 7.0, you can ignore this warning.

## Upgrade Warnings (Upgrading from InstallShield Professional)

Because of the differences in architecture between InstallShield Professional and InstallShield 2021, upgrading your installation project might involve some manual adjustment.

If you need to manually adjust settings within your project, a warning appears in the Output window after your project is upgraded. Refer to the associated help topic to learn what you need to do. (cont.)

**Table 13** • Upgrade Warnings

Warning Number	Message
-289	File link does not exist for a dynamically linked file.
-305	The Include In Build property for the InstallShield Professional component could not be directly migrated.
-480	The Shared attribute can be set for only the key file of a component.
-481	The Shared attribute can be set for only the key file of a component. A dynamically linked file cannot be a key file.
-486	Shortcut icons must be linked to at design time.
-487	In InstallShield 2021, installation of files is done according to file versioning rules.
-488	An obsolete event was encountered in your script.
-495	The ODBC core is not installed by default. If you need this functionality in your setup project, navigate to the Redistributables view and select the MDAC merge module.

## Upgrade Warning 289: File Link Does Not Exist for Dynamically Linked File

In InstallShield Professional, dynamically linking to your source files allows you to add the contents of complete folders and subfolders to your setup without hard-coding paths or file names. If you add files to the source folder or remove files, the list of included files was dynamically updates when you build your release.

### Upgrading to InstallShield 2021

When you upgrade an InstallShield Professional project to InstallShield 2021, and include a file via dynamic file linking that does not exist, Upgrade Warning 289 appears. The warning informs you that a file link has been created, but the file does not exist.

## Upgrade Warning -305: Include In Build Property for the InstallShield Professional Component Could Not Be Directly Migrated

If a component in your InstallShield Professional project had its Include In Build property set to No, the corresponding feature will have its Release Flags property set to EXCLUDEFROMBUILD. To exclude the feature from your setup, you need to manually set a release flag in the Releases view or the Filtering Settings panel of the Release Wizard.

---

**Note** ▪ Because the release flag in the **Releases** view indicates which features to include in the setup, the flag you specify in the **Releases** view must be something other than **EXCLUDEFROMBUILD**.

## Upgrade Warning -480: Incrementing the Shared .dll Reference Count for Files in a File Group

In InstallShield Professional versions 6.x and earlier, setting the shared property for a file group resulted in incrementing the shared .dll reference count for *all* files in that file group on installation. This upgrade migrates this setting to the shared attribute of the component created, in InstallShield 2021, for this file group.

### Shared .dll Reference Count Behavior

In InstallShield 2021, setting the shared attribute of a component results in incrementing of the shared .dll reference count of *only* the key file for that component. By definition, there can be only one key file per component. In order to increment the shared reference count for multiple files, each file requires its own component and the file must be the key file in that component.

---

**Note** ▪ For .exe, .dll, and .ocx files, you can use the Component Wizard to quickly create components for large numbers of files.

In InstallShield 2021, even if a file is not marked as shared, if a shared .dll reference count already exists for a file, it is automatically incremented by the installation of that file and decremented by the uninstallation of that file.

Additionally, reference counts are maintained for components based on the component GUID (or Component Code property). Therefore, the shared property of a component is useful only where there might be file sharing with legacy installations, or if other components with differing component GUIDs install this file.

## Upgrade Warning -481: Incrementing the Shared DLL Reference Count for Dynamically Linked Files in a File Group

In InstallShield Professional version 6.x and previous, setting the shared property for a file group which contained a dynamic file link resulted in incrementing the shared DLL reference count for *all* files in that file group on installation—regardless of the file link type. This upgrade migrates this setting to the shared attribute of the component created, in InstallShield 2021, for this file group.

### Shared DLL Reference Count Behavior

In InstallShield 2021, setting the shared attribute of a component results in incrementing of the shared DLL reference count of *only* the key file for that component. Because dynamically linked files cannot be used as key files, the shared reference count is not incremented for any of the component's files.

A component can have only one key file. Therefore, in order to increment the shared reference count for multiple files, each file must be in its own component and the file must be the component's key file. Files must be statically linked if you want the reference count to increment the shared DLL reference count for each file.

**Note** ▪ For EXE, DLL and OCX files, you can use the Component Wizard to quickly create components for large numbers of files.

In InstallShield 2021—even if a file is not marked as shared—if a shared DLL reference count already exists for a file, it is automatically incremented by the installation of that file and decremented by the uninstallation of that file.

Additionally, reference counts are maintained for components based on the component GUID (or Component Code property). Therefore, the shared property of a component is useful only where there might be file sharing with legacy installations, or if other components with differing component GUIDs install this file.

## Upgrade Warning -486: Specifying Shortcut Icons

### Shortcut Creation in InstallShield Professional

In InstallShield Professional version 6.x and earlier, shortcut icons were authored from the target machine's perspective. For example, if the shortcut's icon was installed to <TARGETDIR>\Mylcon.ico, that was the qualified path specified for the shortcut icon. At run time, the shortcut creation process would bind to the icon on the target machine.

### Shortcut Creation

In InstallShield 2021, shortcut icons must be linked to at design time. Instead of specifying a path on the target machine as the icon file, the project file must specify a path on the build machine as the icon file. The build engine then creates a separate *stream* for your icon in the installation. The installation then uses that stream at run time during its icon creation process. This means that the setup no longer has to install the icon it is using for its shortcuts.

When upgrading your InstallShield Professional projects, InstallShield 2021 attempts to match the target icon path with a file that exists in your setup project. If unable to do so, this warning is displayed.

### Correcting the Path to the Shortcut Icon

**Tip** ▪ To correct the shortcut icon path:

1. Go to the **Shortcuts** view in the IDE and click the shortcut specified in the warning message.
2. In the **Icon File** property field, browse to the icon file.

**Note** ▪ Shortcut icons are required in InstallShield 2021. If an icon is not specified, the build engine uses the first icon index of the shortcut's target file as the shortcut icon.

## Upgrade Warning -487: Overwriting Files Upon Installation

### Installing Files Based on the File Group's Overwrite Property

In InstallShield Professional version 6.x and earlier, you had the ability to set overwrite properties for individual file groups. One file group could install files based on date, while another installed files only if the file version is older than the file version on the target machine.

### Installing Files Based on File Versioning Rules

InstallShield 2021 uses a methodology called file versioning rules to determine which files need to be installed on the target machine. The only option at the component level to override file versioning rules is to set the Never Overwrite property to Yes.

### File Versioning Alternatives

Although the default file versioning rules are satisfactory for most applications, there might be cases where an application's requirements necessitate that you control the rules used to decide if a file should be overwritten. To this end, there are a couple of alternatives to file versioning that can be used either individually or in conjunction with each other to modify file versioning rules.

### REINSTALLMODE

The REINSTALLMODE technique for overriding file versioning rules is a global mechanism for establishing custom versioning rules. Using this technique affects versioning rules for all files in the installation.

#### Task

#### To use the *REINSTALLMODE* property:

1. Open the **Property Manager**.
2. Create a property called REINSTALLMODE.
3. Set the value of this property based on the option codes specified for the REINSTALLMODE property.

The installer reads this property at install time and uses its settings to override file versioning. This setting is also used by the installer during a reinstallation or repair of the application.

### Companion Files

The companion files technique for overriding file versioning rules enables you to configure a file so that it installs based on the installation of a companion file. This technique is useful when it makes sense to bind the installation states of several files together.

For example, you can bind a non-versioned user data file to a versioned .exe file. If the .exe is not installed, the user data is not installed.

## Upgrade Warning -488: Obsolete Event Encountered in Script File

An obsolete event was encountered in your script file. While most InstallShield Professional script events are supported in InstallShield 2021, there are some that are not available.

## Events With Comparable Functionality

- **OnInstallingFile**
- **OnUninstallingFile**

These two events have been replaced with the **OnInstallFilesActionBefore** and **OnInstallFilesActionAfter**. These events are called in Install, Uninstall, and Maintenance modes.

The **OnInstallFilesActionBefore** event is called when the installation is preparing to add or remove files from the target machine based on the Action state of the component containing those files. On uninstall, all related actions that require the source file have already been performed—such as removing any shortcuts to the file and unregistering the file's COM data.

The **OnInstallFilesActionAfter** event is called when the installation has finished adding or removing files from the target machine. On Install, the related install actions for a file have yet to be performed, such as the registration of NT Services and creation of ODBC entries.

---

**Note** ▪ When using the **OnInstallFilesActionBefore** and **OnInstallFilesActionAfter** events, you can use the Windows Installer API function **MsiGetComponentState** to determine the action state of a component.

## Event with Partial Support

The **OnSelfRegistrationError** event is called if you are using the **XCopyFile** function to copy your application files to the source media.

## Unsupported Events

The following events are not supported in InstallShield 2021:

- **OnFileReadOnly**
- **OnFileLocked**
- **OnNextDisk**
- **OnRemovingSharedFile**
- **OnFileError**
- **OnInternetError**
- **OnMD5Error**

## Upgrade Warning 495: ODBC Core Not Installed by Default

The ODBC core is not installed by default. If this is required by your setup project, select the MDAC merge module from the Redistributables view.

### MDAC Prerequisite for ODBC Installation

Although InstallShield Professional provided an object that installed the ODBC core as well as ODBC drivers, InstallShield 2021 does not directly support this functionality. Because Microsoft requires you to install ODBC as a subset of MDAC, the Windows Installer does not support direct installation of the ODBC core.

## Upgrade Errors and Warnings (Upgrading from InstallShield—Windows Installer Edition)

This table provides tips for troubleshooting errors and warnings that may occur when you upgrade a project (.ism file) created using a version of InstallShield—Windows Installer Edition to InstallShield.

**Table 14** • Upgrade Errors and Warnings

Error or Warning Number	Message	Troubleshooting Tips
<b>-100</b>	This error occurs if you are upgrading a project that has a registry value set as a keypath for a component.	You cannot set a registry value as a keypath for a component. To avoid this error, remove that keypath from the component and attempt the upgrade again.
<b>-201</b>	This error occurs if your project contains a component with duplicate file names in it. The upgrader keeps only one of these files and deletes the rest.	To avoid this problem, make sure that you do not have duplicate file names within the same component.
<b>-2007</b> <b>-2011</b> <b>-2121</b> <b>-2122</b>	These errors occur if the upgrader cannot read information from the old table structure, or it cannot write information to the new table structure.	Once the file has been upgraded, you need to navigate to the areas that failed and reinsert your settings.
<b>-6020</b>	The scripting billboard is no longer supported in the Basic MSI project. This property is not being upgraded.	To add support for this property after your project is upgraded, you can convert your project to an InstallScript MSI project and add your billboards in the Support Files/Billboards view.
<b>-6021</b>	The path variable cannot contain apostrophes, which are invalid characters. The name is being changed.	To build your project successfully, update all references to this path variable after the project is upgraded.
<b>-6022</b>	Could not open the MSI file specified in a custom action. The source property is not being converted.	To build your project successfully, enter the product code of the MSI file in the custom action's Source property after the project is upgraded.
<b>-6023</b>	The necessary code page is not installed on your system. The associated string table values are not being upgraded correctly.	Install the appropriate code page prior to project upgrade.

**Table 14** • Upgrade Errors and Warnings (cont.)

Error or Warning Number	Message	Troubleshooting Tips
<b>-6026</b>	This error occurs if you have a user-defined path variable in your InstallShield—Windows Installer Edition project that is the same as a predefined path variable in InstallShield.	To upgrade successfully, remove the user-defined path variable in the InstallShield—Windows Installer Edition project and upgrade your project to InstallShield. After upgrading, open your project in InstallShield and create a new path variable that is equivalent to the user-defined path variable. Update all references in the InstallShield project.
<b>-6031</b>	The property name "sOldPropertyName" contains invalid characters. The name is being changed to "sNewPropertyName." To build your project successfully, update all references to that property name after your project is upgraded.	After your project upgrades, change all references to the old property name to the new property name.

## HRESULT Values for Windows Installer Run-time Errors

ISRegSrv.dll is the InstallShield DLL that is called from custom actions to register and unregister self-registering files on the target system. The DLL displays the Windows Installer run-time error 1904 or 1905 when it fails for particular reasons.

- 1904: Module [2] failed to register. HRESULT [3].
- 1905: Module [2] failed to unregister. HRESULT [3].

[3] could be one of InstallShield's custom HRESULTs.

**Table 15** • HRESULT Values for Windows Installer Run-time Errors

HRESULT	Description
-2147220475	Invalid file extension as a self-register file.
-2147220474	Executable file extension, but not actually an executable.
-2147220473	Generic registration failure.
-2147220472	Generic unregistration failure.

## DIFxAPI Errors (InstallScript Projects)

This table lists DIFxAPI errors that can be returned calling DIFx driver functions. If the return value from a DIFx driver function is a Win32 error (a positive return value), ISERR\_WIN\_BASE is added to the error so that it is less than ISERR\_SUCCESS. For the most updated documentation on Win32 errors, see the [MSDN Library](#).

**Table 16** • DIFxAPI Errors (InstallScript)

Return Value	Description
<b>ISERR_SERVICE_NOT_ENABLED</b>	Indicates that DIFx support has not been enabled or was disabled using Disable (SERVICE_DIFX_*). For information on enabling DIFx support, see <a href="#">Installing Device Drivers</a> .
<b>ISERR_WIN_BASE + ERROR_INVALID_FUNCTION</b>	Indicates that the difxapi.dll was not found (in SUPPORTDIR) or that an exported function could not be found. Verify that you have enabled DIFx support in your project.
<b>ERROR_DEPENDENT_APPLICATIONS_EXIST</b>	The function removed an association between the driver package and the specified application but the function did not uninstall the driver package because other applications are associated with the driver package.
<b>ISERR_WIN_BASE + ERROR_ALREADY_EXISTS</b>	The driver package is already preinstalled and was not preinstalled again.
<b>ISERR_WIN_BASE + ERROR_INSUFFICIENT_BUFFER</b>	The pDestInfPath buffer is not large enough to retrieve the requested .inf file path.
<b>ISERR_WIN_BASE + ERROR_FILE_NOT_FOUND</b>	The specified .inf file was not found.
<b>ERROR_DRIVER_PACKAGE_NOT_IN_STORE</b>	An .inf file does not exist in the driver store that corresponds to the .inf file specified by DriverPackageInfPath.
<b>ISERR_WIN_BASE + ERROR_NO_MORE_ITEMS</b>	This error code applies only if the DRIVER_PACKAGE_ONLY_IF_DEVICE_PRESENT constant is specified but the DRIVER_PACKAGE_FORCE constant is not specified. In this case, the function did not preinstall the specified driver package because, although the specified driver package matched devices in the device tree, the driver already installed for each such device is a better match for the device than the specified driver package. This applies to present and nonpresent devices.
<b>ERROR_NO_SUCH_DEVINST</b>	This error code applies only if the DRIVER_PACKAGE_ONLY_IF_DEVICE_PRESENT constant is specified. The function did not preinstall the specified driver package because the driver package does not match a device in the device tree. This applies to present and nonpresent devices.

**Table 16** • DIFxAPI Errors (InstallScript) (cont.)

Return Value	Description
<b>ERROR_NO_DEVICE_ID</b>	The driver package does not specify a hardware ID or compatible ID that is supported by the current platform.
<b>ERROR_MISSING_FILE</b>	The function did not preinstall the driver package because files referenced by the .inf file could not be found.
<b>ISERR_WIN_BASE + ERROR_CANNOT_MAKE</b>	The function did not preinstall the driver package.
<b>TRUST_E_NOSIGNATURE</b>	The driver package is not signed.
<b>CERT_E_EXPIRED</b>	The certificate used to sign the driver package is expired.
<b>CERT_E_WRONG_USAGE</b>	<p>The certificate for the driver package is not valid for the requested usage. If the driver package does not have a valid WHQL signature, the function returns this error code in the following two situations</p> <ul style="list-style-type: none"> <li>• In response to a driver signing dialog box, the user chose not to install the driver package.</li> <li>• The DRIVER_PACKAGE_SILENT constant is specified.</li> </ul>
<b>CRYPT_E_FILE_ERROR</b>	The catalog file for the driver package was not found, or possibly, some other error occurred when the function attempted to verify the driver package signature.
<b>ERROR_INVALID_CATALOG_DATA</b>	The catalog file for the driver package is not valid or was not found.
<b>ERROR_SIGNATURE_OSATTRIBUTE_MISMATCH</b>	The certificate is not valid for the current Windows version or it is expired.
<b>ISERR_WIN_BASE + ERROR_SHARING_VIOLATION</b>	A component of drive package in the driver store is locked by a thread or process. This can occur, if a process or thread, other than the thread or process being called, is currently accessing the same driver package.
<b>ISERR_WIN_BASE + ERROR_ACCESS_DENIED</b>	Only members of the Administrators group can access this functionality.
<b>ISERR_WIN_BASE + ERROR_BAD_ENVIRONMENT</b>	The Windows version on which this call was made does not support this operation.
<b>ISERR_WIN_BASE + ERROR_INVALID_PARAMETER</b>	A supplied parameter is not valid.
<b>ISERR_WIN_BASE + ERROR_INVALID_NAME</b>	The specified .inf file path is not valid.

**Table 16** ▪ DIFxAPI Errors (InstallScript) (cont.)

Return Value	Description
<b>ISERR_WIN_BASE + ERROR_FILENAME_EXCED_RANGE</b>	The length, in characters, of the specified .inf file path is greater than the maximum supported length.
<b>ISERR_WIN_BASE + ERROR_CANT_ACCESS_FILE</b>	The driver package files could not be preinstalled because the specified .inf file is in the system .inf file directory.
<b>ISERR_WIN_BASE + ERROR_OUTOFMEMORY</b>	Available system memory was insufficient to preinstall the driver package.
<b>ERROR_UNSUPPORTED_TYPE</b>	The driver package type is not supported.
<b>ERROR_IN_WOW64</b>	The 32 bit version DIFxAPI does not work on Win64 systems. A 64-bit version of DIFxAPI is required.
<b>ERROR_INSTALL_FAILURE</b>	The installation failed.
<b>ISERR_WIN_BASE + ERROR_INVALID_FUNCTION</b>	The driver package is not for a Plug and Play (PnP) function driver.

## "String PRODUCT\_NAME was not found in string table" Error

While converting an InstallScript MSI project to an InstallScript project, you may encounter this error when your setup project does not run during the conversion. You should verify if `SHELL_OBJECT_FOLDER = @PRODUCT_NAME;` is in your script.

**Note** ▪ Setting `SHELL_OBJECT_FOLDER` in `OnFirstUIBefore` is not necessary. If you have the following line in your script, you should delete it:

```
SHELL_OBJECT_FOLDER = @PRODUCT_NAME;"
```

## InstallScript Error Information

The InstallScript compiler displays error messages in the Output window. This window, which is normally positioned near the bottom of the main window, has a Compile tab. If the Output window is not present, on the View menu in InstallShield, click Output.

The following types of error messages are displayed to identify errors in your setup script:

**Table 17** ▪ Error Message Types

Error Message Type	Range
<b>Warnings</b>	C7501 through C7503

**Table 17** ▪ Error Message Types (cont.)

Error Message Type	Range
Syntax and Compiler Errors	C8001 through C8522
Fatal Errors	F8501 through F8519
Internal Errors	C9001

## InstallScript Syntax or Compiler Errors

Syntax errors prevent the file Setup.inx from being created and cause the compiler to display one of the error messages in the list below. A single syntax error can cause the compiler to generate more than one error message. The first error message is triggered by the syntax error. The others are triggered because the compiler is not able to resolve the statement or statements that follow the error.

**Tip** ▪ If your script generates more than one syntax error, correct the first one in the list and then recompile. By correcting the first error, you might eliminate one or more of the others.

**Table 18** ▪ InstallScript Syntax or Compiler Errors

Error Number	Message
C8001	multiple main programs defined
C8002	function name expected
C8003	function has no prototype declaration
C8004	identifier already declared
C8005	function was declared as DLL function
C8006	missing '(' after function name
C8007	comma expected
C8008	identifier expected
C8009	too many parameters
C8010	missing right parenthesis
C8011	missing 'begin' at start of function
C8012	semicolon expected
C8013	unexpected end of source file

**Table 18** • InstallScript Syntax or Compiler Errors (cont.)

Error Number	Message
<b>C8014</b>	identifier already defined
<b>C8015</b>	member name already defined
<b>C8016</b>	undefined label:
<b>C8017</b>	expected typedef (struct) name
<b>C8018</b>	typedef object illegal in this context
<b>C8019</b>	expected type declaration
<b>C8020</b>	parameter list expected
<b>C8021</b>	missing 'begin' after 'typedef'
<b>C8022</b>	comma or semicolon expected
<b>C8023</b>	right bracket expected
<b>C8024</b>	invalid array/string size
<b>C8025</b>	undefined identifier
<b>C8026</b>	invalid use of identifier
<b>C8027</b>	missing operand
<b>C8028</b>	unresolved operator
<b>C8031</b>	uncalled function
<b>C8032</b>	missing member reference
<b>C8033</b>	unsubscripted array
<b>C8034</b>	missing expression
<b>C8035</b>	statement label required
<b>C8036</b>	too many arguments
<b>C8037</b>	variable required
<b>C8038</b>	numeric value required
<b>C8039</b>	string value required

**Table 18** • InstallScript Syntax or Compiler Errors (cont.)

Error Number	Message
<b>C8040</b>	incomplete argument list
<b>C8042</b>	string or array type required
<b>C8043</b>	typedef pointer type required
<b>C8044</b>	typedef type required
<b>C8045</b>	member name not found
<b>C8046</b>	numeric variable required
<b>C8047</b>	can only take address of variable
<b>C8048</b>	macro name missing
<b>C8049</b>	missing expression for #if/#elif
<b>C8050</b>	invalid expression for #if/#elif
<b>C8051</b>	missing end of string literal
<b>C8052</b>	macro expansion text too large
<b>C8053</b>	identifier not a #define macro
<b>C8054</b>	include file name missing
<b>C8055</b>	#elif not preceded by #if
<b>C8057</b>	#else not preceded by #if
<b>C8058</b>	#endif not preceded by #if
<b>C8059</b>	unrecognized preprocessor command
<b>C8062</b>	constant operand required
<b>C8063</b>	input line too long
<b>C8064</b>	unterminated comment
<b>C8065</b>	string literal exceeds 255 characters
<b>C8066</b>	missing #endif statement at end of file
<b>C8067</b>	integer constant too large

**Table 18** • InstallScript Syntax or Compiler Errors (cont.)

Error Number	Message
<b>C8068</b>	unrecognized character encountered
<b>C8069</b>	preprocessor command must be first on line
<b>C8070</b>	string constant expected
<b>C8071</b>	colon expected
<b>C8072</b>	'elseif' cannot follow 'else'
<b>C8073</b>	missing 'then' keyword
<b>C8074</b>	'else' clause already encountered
<b>C8075</b>	'default' label already encountered
<b>C8076</b>	multiple case labels for statement
<b>C8077</b>	label already defined
<b>C8078</b>	label illegal in this 'for' loop
<b>C8079</b>	invalid statement
<b>C8080</b>	missing arguments for function
<b>C8081</b>	invalid result for assignment
<b>C8082</b>	missing '(' after switch
<b>C8083</b>	missing ')' after switch
<b>C8084</b>	missing 'case' after switch
<b>C8085</b>	missing '='
<b>C8086</b>	missing 'to' or 'downto'
<b>C8087</b>	cannot return value from program
<b>C8088</b>	not inside if statement
<b>C8089</b>	not inside for statement
<b>C8090</b>	not inside repeat statement
<b>C8091</b>	not inside while statement

**Table 18** • InstallScript Syntax or Compiler Errors (cont.)

Error Number	Message
<b>C8092</b>	function called but not defined
<b>C8093</b>	size required for string in typedef
<b>C8097</b>	syntax error
<b>C8098</b>	missing '.name' after DLL name
<b>C8099</b>	DLL function name expected
<b>C8100</b>	function not defined for this DLL
<b>C8101</b>	must specify DLL for this function
<b>C8112</b>	typedef includes instance of self
<b>C8113</b>	local variables cannot be external
<b>C8114</b>	preprocessor user define error
<b>C8126</b>	'text' : string variable required
<b>C8127</b>	label illegal within try/catch/endcatch
<b>C8128</b>	goto illegal within try/catch/endcatch
<b>C8522</b>	Access is denied.

## Error C8001

### Message

'program' : multiple main programs defined

### Description

The keyword program was encountered after the main program block.

### Troubleshooting Tips

A script can contain only one main program block—beginning with the keyword program and ending with the keyword endprogram. Restructure your script to use only one main program block.

If your script consists of multiple source files, this error message occurs if more than one of those source files contains a main program block.

## Error C8002

### Message

'text' : function name expected

### Description

The compiler expected to encounter a function name at the location indicated by *text*.

### Troubleshooting Information

Check for a missing or mistyped function name before a parameter list.

Check for missing semicolons in preceding lines.

## Error C8003

### Message

'name' : function has no prototype declaration

### Description

The function specified by *name* has not been declared in a prototype statement.

### Troubleshooting Information

If the function has not been declared, insert a prototype statement before the current block (main program or function definition).

If the function has been declared ahead of the current block, compare the function declaration in the prototype statement with the function header in the function definition. Be sure the spelling of the function name is identical in both places and that the number and types of parameters matches.

If the function has been declared later in the script, move the declaration before the current block.

## Error C8004

### Message

'name' : identifier already declared

### Description

The identifier specified by *name* has already been declared in the current block. Identifiers can be declared only once in the same block.

## Troubleshooting Information

Examine the main program block or function block where the error occurred to find the first declaration of the identifier. If the second declaration is simply a duplicate of the first, delete it. If you intended the second declaration to be a different variable than the first, rename the identifier in the second declaration and update all statements in the script that reference it.

If you cannot find a previous declaration of the variable, you may be declaring an identifier whose name is reserved in InstallScript. Reserved words are syntax colored in the script editor.

## Error C8005

### Message

'name' : function was declared as DLL function

### Description

The function definition for the function specified by *name* is invalid because that function has been declared in a prototype statement as a DLL function.

### Troubleshooting Information

If the function is not a DLL function, remove the DLL file name from the function prototype.

If the name of the user-defined function conflicts with the DLL function name, rename the user-defined function and update all statements in the script that reference it. Be sure the user-defined function has been declared in a prototype statement.

## Error C8006

### Message

'text' : missing '(' after function name

### Description

The compiler expected to find the opening parenthesis that follows a function name in a function definition; the character or characters indicated by *text* were encountered instead.

### Troubleshooting Information

Check that the function's parameter list is enclosed within parentheses. If the function takes no parameters, the parentheses will be empty.

Verify that only space characters come between the function name and its parameter list.

## Error C8007

### Message

'text' : comma expected

### Description

The character or characters specified by *text* were encountered at a location where a comma was expected.

### Troubleshooting Information

If the error occurred in a function declaration, then a comma required to separate parameter declarations is probably missing.

If the error occurred in a function call, then a comma required to separate parameters is probably missing.

## Error C8008

### Message

'text' : identifier expected

### Description

The character or characters specified by *text* were encountered at a location where an identifier was expected.

### Troubleshooting Information

If this error occurs in a variable declaration, check that the data type is followed by an identifier, with no intervening punctuation; check that the identifier contains only allowable characters.

If this error occurs in a function call, check that each pair of argument is delimited by one and only one comma.

## Error C8009

### Message

'text' : too many parameters

### Description

The character or characters specified by *text* were encountered in a function call parameter list that contains more parameters than have been declared for the function.

### Troubleshooting Information

To identify the argument or arguments that do not belong in the function call, compare the number and types of arguments in the function call to the number and types of parameters declared for that function.

## Error C8010

### Message

'text' : too many parameters

### Description

The character or characters specified by *text* were encountered at a location where a right parenthesis was expected.

### Troubleshooting Information

This error is usually triggered when the right parentheses is missing from the parameter list of a function header in a function definition.

## Error C8011

### Message

'end' : missing 'begin' at start of function

### Description

The keyword begin is missing in a function declaration.

### Troubleshooting Information

Insert the keyword begin before the first statement in the function. Local variable declarations should appear between the function header and the keyword begin. The function header itself should not be terminated with a semicolon.

## Error C8012

### Message

'text' : semicolon expected

### Description

The character or characters specified by *text* were encountered at a location where a semicolon was expected.

### Troubleshooting Information

Insert a semicolon to terminate the statement that appears just before the error location.

## Error C8013

### Message

unexpected end of source file

### Description

The compiler reached the end of the source file without encountering the keyword required to close the current program or function block.

### Troubleshooting Tips

- If your script contains function definitions, check that each function definition is terminated with the keyword `end` and a semicolon.
- Check that typedef blocks are closed with an end statement.
- Check that all flow control blocks are correctly closed.
- Check that all `#if`, `#ifdef`, and `#ifndef` statements have a matching `#endif` statement.

## Error C8014

### Message

'name' : identifier already defined

### Description

The identifier specified by *name* has already been declared in the structure.

### Troubleshooting Information

Examine the script and any scripts included before the error location to find the first declaration of the identifier. If the second declaration is simply a duplicate of the first, delete it. If you intended the second declaration to create a different identifier than the first, rename the identifier in the second declaration and update all statements in the script that reference it.

## Error C8015

### Message

'name' : member name already defined

### Description

The member identified by *name* has already been declared in the structure.

## Troubleshooting Information

Examine the structure in which the error occurred to find the first declaration of the member. If the second declaration is simply a duplicate of the first, delete it. If you intended the second declaration to be a different member than the first, rename the member in the second declaration and update all statements in the script that reference it.

## Error C8016

### Message

'name' : undefined label:

### Description

The identifier specified by *name* is used in a goto statement to reference a label that has not been defined.

## Troubleshooting Information

The error is located in the block directly above the error location. Find the goto statement that references name. If the goto statement is in a program block, it must reference a label that has been defined in the program block. If the goto statement is in a function definition, it must reference a label that has been defined in that function definition. Determine where you want control to flow and define the label at that location.

## Error C8017

### Message

'text' : expected typedef (struct) name

### Description

The character or characters specified by *text* were encountered at a location where a typedef declaration was expected.

## Troubleshooting Information

Check that a data type has been specified for the variable being declared. Verify that the reserved word for that data type is spelled correctly and is in all upper case.

If more than one variable is declared for that data type, check that the individual identifier names are separated by commas and not some other punctuation mark.

Verify that the data declaration is terminated with a semicolon.

If the error occurs in a function prototype that declares a pointer to a structure as a parameter, check that the structure has been declared ahead of the function prototype.

## Error C8018

### Message

'text' : typedef object illegal in this context

### Description

The structure type specified by *text* was encountered at a location where it is not allowed.

### Troubleshooting Information

This error occurs in a function prototype that declares a structure type as one of its parameters. This is not allowed. Instead, declare the parameter as a pointer to a structure by following the name of the structure type with the keyword `POINTER`, as shown below:

```
typedef RECT
begin
    SHORT sX;
    SHORT sY;
end;

RECT Rectangle;
RECT POINTER pRect;

prototype SizeRectangle(RECT POINTER);
```

## Error C8019

### Message

'text' : expected type declaration

### Description

The character or characters specified by *text* were encountered at a location where a data declaration was expected.

### Troubleshooting Information

This error generally occurs when a semicolon is missing at the end of a data declaration in a line ahead of the error location. It also occurs in a function definition when the function header is terminated with a semicolon.

## Error C8020

### Message

'text' : parameter list expected

## Description

The character or characters specified by *text* were encountered immediately after a prototype declaration for which there was no parameter list.

## Troubleshooting Information

Specify the parameter list for the function above the error location. If the function takes no parameters, specify an empty list by placing opening and closing parenthesis after the function name.

## Error C8021

### Message

'text' : missing 'begin' after 'typedef'

### Description

The character or characters specified by *text* were encountered in a typedef statement where the keyword `begin` was expected. In a typedef statement, the keyword `begin` must follow the structure name.

### Troubleshooting Information

Insert the keyword `begin` after the structure name, with no intervening punctuation.

## Error C8022

### Message

'text' : comma or semicolon expected

### Description

The character or characters specified by *text* were encountered at a location where a comma or semicolon was expected.

### Troubleshooting Information

If this error occurs near a data declaration, check that the identifier is valid and that the data declaration is terminated with a semicolon. If two or more identifiers are being declared in the same statement, verify that they are delimited by commas.

## Error C8023

### Message

'text' : right bracket expected

## Description

The character or characters specified by *text* were encountered at a location where a right bracket was expected.

## Troubleshooting Information

This error occurs when the closing right bracket is missing from a reference to an array.

## Error C8024

### Message

'text' : invalid array/string size

### Description

The character or characters specified by *text* may not be used to declare the size of a string or array.

### Troubleshooting Information

If the size indicator is a constant, verify that it is spelled correctly.

Verify that the size of the array is greater than 0.

## Error C8025

### Message

'text' : undefined identifier

### Description

The identifier specified by *text* has not been declared.

### Troubleshooting Information

All identifiers in a script must be declared before they can be referenced in the main program block or in a function block. Check that the identifier has been declared. If it has, check that spelling used in the declaration matches the spelling of the identifier at the error location.

**Note** ▪ Your script might be calling an unsupported function. See [Unsupported Functions](#) for more information.

### “INSTALLDIR”: undefined identifier” when Compiling After Conversion

Error C8025 specifies that the identifier (INSTALLDIR in this case) has not been declared. All identifiers in a script must be declared before they can be referenced in the main program block or in a function block.

**Note** ▪ The exact error message for error C8025 is not a specific error. It is issued to anything undefined.

As part of the changes that take place during the conversion process (from InstallScript MSI to an InstallScript project), INSTALLDIR should have been changed to TARGETDIR throughout various IDE elements. Error C8025 occurs when the value of TARGETDIR is not set in your script.

Therefore, the value of TARGETDIR must be set in your script, as it is by default in the **OnFirstUIBefore** event handler function.

You can use the following code to set TARGETDIR:

```
if ( ALLUSERS ) then
    TARGETDIR = PROGRAMFILES ^ IFX_COMPANY_NAME ^ IFX_PRODUCT_NAME;
else
    TARGETDIR = FOLDER_APPDATA ^ IFX_COMPANY_NAME ^ IFX_PRODUCT_NAME;
```

## Error C8026

### Message

'text' : invalid use of identifier

### Description

The identifier specified by *text* is being used incorrectly in a statement.

### Troubleshooting Information

This error message can be triggered by a number of errors, such as the use of a structure type name, rather than the structure name, in an operation. Examine the statement at the error location and check that all identifiers in the statement are being used correctly.

## Error C8027

### Message

missing operand

### Description

The compiler was unable to find the operand that was expected after an operator.

### Troubleshooting Information

This error message may be displayed when the compiler encounters an incomplete statement ending with an operator at the end of the source file.

## Error C8028

### Message

'text' : unresolved operator

## Description

The character or characters specified by *text* were encountered after an expression that could not be resolved.

## Troubleshooting Information

This error occurs when an operand is missing from an expression. Examine each operator in the expression and make sure that each one has the operands it requires.

## Error C8031

### Message

'text' : uncalled function

### Description

The character or characters specified by *text* were encountered after a function name, where the opening parenthesis of the argument list was expected.

This error occurs in statements in which the result of a function call is assigned to a variable. The message is triggered by an error in the argument list that follows the function name.

### Troubleshooting Information

Check that the argument list is delimited from the function name by an opening parenthesis.

If the argument list was not specified, insert it after the function name; when calling a function that takes no parameters, place empty set of opening and closing parentheses after the function name.

## Error C8032

### Message

'text' : missing member reference

### Description

The character or characters specified by *text* were encountered at a location where a member name was expected.

### Troubleshooting Information

The line of code at the error location references a structure rather than a member of a structure. Determine which member of the structure you intended to reference and insert that member name. Remember to use the member operator to delimit the structure name and the member name.

## Error C8033

### Message

'text' : unsubscripted array

## Description

The identifier that precedes the character or characters specified by *text* is an unsubscripted array variable. InstallScript does not allow references to a complete array structure. You must reference elements in the array individually.

## Troubleshooting Information

Determine which element of the array you want to reference and indicate its position in the array with a subscript. The subscript must be placed within square brackets and positioned immediately after the array name.

## Error C8034

### Message

'text' : missing expression

### Description

The character or characters specified by *text* were encountered at a location where an expression was expected.

### Troubleshooting Information

This error generally occurs in an assignment statement when the value to be assigned is missing. Insert an expression to the right of the assignment operator.

If the error occurs in a statement that references a constant, verify that the definition of that constant includes both the constant name and a value.

## Error C8035

### Message

'text' : statement label required

### Description

The character or characters specified by *text* were encountered after the keyword `goto`, where a label is required.

### Troubleshooting Information

Add a label after the keyword `goto` or delete the `goto` statement.

## Error C8036

### Message

'name' : too many arguments

## Description

The function specified by *name* is being called with too many arguments.

## Troubleshooting Information

Compare the arguments in the function call with the parameter list in the declaration for that function. Delete the argument or arguments in the function call that are not defined in the declaration.

## Error C8037

### Message

'text' : variable required

### Description

The constant, literal value or structure member specified by *text* is being passed as an argument in a parameter position that requires a variable.

### Troubleshooting Information

Declare a variable of the type required for the parameter; assign the constant or literal value to that variable; then pass the variable instead of the constant or literal value.

InstallShield does not allow a structure member to be passed by reference. Declare a variable of the same type as the structure member; assign the value of the structure member to the new variable; then pass the variable instead. When the function returns, assign the value of variable to the structure member.

## Error C8038

### Message

'text' : numeric value required

### Description

The non-numeric argument specified by *text* was passed in a parameter position requiring a numeric argument.

### Troubleshooting Information

Make sure all arguments passed are of the correct data types for the parameter positions they occupy. Also make sure no arguments are missing.

## Error C8039

### Message

'value' : string value required

## Description

The number specified by *value* was encountered in an expression, statement, or function argument that requires string data.

## Troubleshooting Information

In a string operation, check that all operands and operators are compatible with string data.

In an assignment statement, verify that the value you are assigning to a string variable is itself a string.

In a function call, be sure that you are not passing non-string data in a parameter position that requires a string.

## Error C8040

### Message

'name' : incomplete argument list

### Description

One or more arguments are missing in the call to the function specified by *name*.

### Troubleshooting Information

To identify the missing argument, compare the number and types of arguments in the function call to the number and types of parameters for that function.

If all of the arguments are present, check that they are delimited by commas.

## Error C8042

### Message

'[' : string or array type required

### Description

The identifier to the left of the bracket must be a string or array type.

### Troubleshooting Information

This error occurs when you specify an index value for a variable that is not a string or array. Examine the identifier to the left of the bracket. If it is not a string or array, delete the index value or declare the variable as a string or array.

## Error C8043

### Message

'text' : typedef pointer type required

## Description

The character or characters specified by *text* can be used only with a pointer to a structure.

## Troubleshooting Information

A common reason for this error is the use of a structure pointer operator between a structure name and a member name. The structure pointer operator can be used only to specify the member of a record that is referenced with a pointer to a structure. Replace the structure pointer operator with a member operator.

## Error C8044

### Message

'text' : typedef type required

### Description

The character or characters specified by *text* can be used only with a structure that has been declared in a typedef statement.

### Troubleshooting Information

A common reason for this error is the use of a member operator between a pointer to a structure and a member name. The member operator can be used only to specify the member of a structure that is referenced with a structure name. Replace the member operator with a structure pointer operator.

## Error C8045

### Message

'name' : member name not found

### Description

The member specified by *name* does not exist in the structure you are referencing.

### Troubleshooting Information

Check the structure definition for the specified member.

Check the spelling of the member name.

## Error C8046

### Message

numeric variable required

### Description

A non-numeric argument was passed in a parameter position requiring a numeric variable.

### Troubleshooting Information

Replace the argument with a numeric variable.

## Error C8047

### Message

'&' : can only take address of variable

### Description

The compiler encountered an address operation on a constant or literal.

### Troubleshooting Information

The address operator ( & ) can be used only with a variable.

## Error C8048

### Message

macro name missing

### Description

The #define statement at the error location has no macro name.

### Troubleshooting Information

Insert a macro name after the #define preprocessor directive and before the macro value.

## Error C8049

### Message

missing expression for #if/#elif

### Description

The #if or #elif preprocessor directive is not followed by a valid expression to determine the flow of compilation.

### Troubleshooting Information

This error message is triggered if an expression has not been specified after an #if or #elif keyword. It can also be triggered if an invalid expression follows one of those directives.

## Error C8050

### Message

'text' : invalid expression for #if/#elif

### Description

The character or characters specified by *text* are invalid in the expression following the #if or #elif preprocessor command.

### Troubleshooting Information

This error message is triggered if an invalid expression after an #if or #elif keyword.

## Error C8051

### Message

missing end of string literal

### Description

The string literal in a #define statement has no closing quotation mark.

### Troubleshooting Information

Look for a #define statement above the line on which the error was detected. For a string constant, enclose the literal in opening and closing quotation marks. Numeric constants should not be enclosed within quotation marks.

## Error C8052

### Message

macro expansion text too large

### Description

The text specified for the identifier in a #define statement exceeds 256 characters.

### Troubleshooting Information

Either shorten the string specified for that identifier or divide the text into two or more shorter strings and specify each in a #define statement. Then concatenate the strings in your program.

## Error C8053

### Message

'name' : identifier not a #define macro

### Description

The identifier specified by *name*, which is used in an #undef statement, has not been defined.

### Troubleshooting Information

Check the spelling of the identifier specified by *name*.

## Error C8054

### Message

include file name missing

### Description

The preprocessor directive #include does not specify the name of the file to include.

### Troubleshooting Information

Specify the name of a source file you want to include or delete the preprocessor directive.

## Error C8055

### Message

#elif not preceded by #if

### Description

The compiler encountered an #elif directive that was not preceded by an #if directive.

### Troubleshooting Information

Examine the statements that precede the error location and restructure the conditional compile directives to start with an #if directive.

## Error C8057

### Message

#else not preceded by #if

## Description

The compiler encountered an `#else` directive that was not preceded by an `#if` directive.

## Troubleshooting Information

Examine the statements that precede the error location and restructure the conditional compile directives to start with an `#if` directive.

## Error C8058

### Message

`#endif` not preceded by `#if`

### Description

The compiler encountered an `#endif` directive that was not preceded by an `#if` directive.

### Troubleshooting Information

Examine the statements that precede the error location and restructure the conditional compile directives to start with an `#if` directive.

## Error C8059

### Message

`'text'` : unrecognized preprocessor command

### Description

The character or characters specified by *text* and preceded by the symbol `#` is not recognized as a preprocessor command.

### Troubleshooting Information

Verify that the preprocessor command is valid in an InstallShield script and that it is spelled correctly.

## Error C8062

### Message

`'text'` : constant operand required

### Description

The character or characters specified by *text* were encountered in a statement where a constant was expected.

## Troubleshooting Information

This error message is triggered in a switch...endswitch block when the keyword case is not followed by a constant or literal.

### Error C8063

#### Message

input line too long

#### Description

A source code line exceeds 1,024 characters.

#### Troubleshooting Information

Divide the line into two or more lines.

### Error C8064

#### Message

unterminated comment

#### Description

The comment that begins at the error location is not terminated.

#### Troubleshooting Information

Find the end of the comment. Insert comment termination characters or correct the comment termination characters if they were entered incorrectly.

### Error C8065

#### Message

string literal exceeds 255 characters

#### Description

The string literal at the error location has more than 255 characters.

#### Troubleshooting Information

Divide the string literal into two or more string literals and concatenate them.

## Error C8066

### Message

missing #endif statement at end of file

### Description

An #if directive that appears in the script does not have a corresponding #endif directive.

### Troubleshooting Information

Examine the preprocessor directives in your script. Make sure that all #if directives have a corresponding #endif directive.

## Error C8067

### Message

'number' : integer constant too large

### Description

The value specified by *number* is too large for the number variable.

### Troubleshooting Information

The valid range of NUMBER data is -2,147,483,648 and +2,147,483,647. If you specify a value in the range +2,147,483,647 to +4,294,967,295, that value will overflow and the result will be a negative number. If the value is greater than 4,294,967,299, this error message will be displayed.

## Error C8068

### Message

'char' : unrecognized character encountered

### Description

The character specified by *char* was not recognized by the compiler.

### Troubleshooting Information

Certain characters, such as “\$” and “{,” are not recognized by the compiler.

## Error C8069

### Message

'#' : preprocessor command must be first on line

## Description

The preprocessor directive identified by the symbol # was encountered at a location where it is not allowed. A preprocessor directive must be the first keyword in any line where it appears.

## Troubleshooting Information

The symbol # is reserved to identify preprocessor directives. It has no other valid use in InstallScript. Examine the line that produced the error. If the symbol # appears in an identifier, rename that identifier there and everywhere else in the script where it is referenced.

## Error C8070

### Message

'text' : string constant expected

### Description

The character or characters specified by *text* were encountered in a statement where a string constant was expected.

### Troubleshooting Information

This error message is triggered in a switch...endswitch block when the keyword case is not followed by a string constant. In a switch...endswitch block, the constants specified in the case statements must be the same data type as the variable or expression result specified in the switch statement.

## Error C8071

### Message

colon expected

### Description

The compiler expected a colon in the statement.

### Troubleshooting Information

This error occurs in a switch statement when the constant after the keyword case is not followed by a colon. Insert a colon between the constants and the statements for that case.

## Error C8072

### Message

'elseif' : 'elseif' cannot follow 'else'

## Description

The keyword `elseif` was encountered after an `else` statement in an `if...endif` block.

## Troubleshooting Information

The keyword `elseif` cannot be used in an `if...endif` block after an `else` statement. Restructure the `if...endif` block to avoid this error.

## Error C8073

### Message

`'text' : missing 'then' keyword`

### Description

The character or characters specified by `text` were encountered in an `if` block where the keyword `then` was expected.

### Troubleshooting Information

Locate the `if` statement that immediately precedes the error location. Insert the keyword `then` after the conditional expression that follows the keyword `if`.

## Error C8074

### Message

`'else' : 'else' clause already encountered`

### Description

Two `else` statements were encountered in an `if...endif` block.

### Troubleshooting Information

An `if...endif` block can include only one `else` branch. If you require multiple conditional branching, use an `if...endif` block that includes `elseif` statements or a `switch...endswitch` block instead.

## Error C8075

### Message

`'text' : 'default' label already encountered`

### Description

A second default case was encountered in a `switch...endswitch` statement.

## Troubleshooting Information

A switch...endswitch statement can include only one instance of the keyword default to specify a default case. Restructure the switch....endswitch statement to eliminate one of the default cases.

In some versions of InstallShield, this error message is displayed when multiple case labels are encountered in a switch block.

## Error C8076

### Message

'case' : multiple case labels for statement

### Description

The compiler encountered the keyword case where it expected to find the statement or statements to be executed for the last defined case.

## Troubleshooting Information

The case statement that immediately precedes the character or characters specified by *text* is incomplete. It may be missing a terminating semicolon.

In some versions of InstallShield, this error message is displayed when more than one default statement is encountered in a switch block.

## Error C8077

### Message

'name' : label already defined

### Description

The label indicated by *name* has already been used in the main program block or function.

## Troubleshooting Information

Each label in the program block or in a function block must be unique.

## Error C8078

### Message

label illegal in this 'for' loop

### Description

You cannot define a label within a for statement.

## Troubleshooting Tips

Examine the statement at the error location. Modify your code so that a label is no longer defined within the for statement.

## Error C8079

### Message

'text' : invalid statement

### Description

The statement at the location indicated by *text* specifies a process that is not allowed or is invalid in the current context.

### Troubleshooting Tips

Examine the statement at the error location. Verify that the process is valid. Examples of invalid statements are assignment statements with a constant or an arithmetic operation on the left side of the assignment operator and an end statement directly below a label.

If the statement at the error location is valid, examine statement blocks (such as record declarations, control statements and function definitions) in the lines above the error location. Verify that each statement block is terminated with the correct keyword.

## Error C8080

### Message

'text' : missing arguments for function

### Description

The character or characters specified by *text* were encountered after a function call where an argument list was expected.

### Troubleshooting Information

Determine which arguments are required by the function and revise the call to include a complete argument list within parentheses.

## Error C8081

### Message

'text' : invalid result for assignment

## Description

The character or characters specified by *text* cannot be assigned the value specified by the assignment statement.

## Troubleshooting Information

This error occurs when you attempt to assign a value to a structure. InstallScript does not allow direct assignment to a structure. You must assign a value to each member of the structure individually.

## Error C8082

### Message

'text' : missing '(' after switch

### Description

The character or characters specified by *text* were encountered in a switch...endswitch block at a location where a left parenthesis was expected.

### Troubleshooting Information

Examine the switch statement in which this error occurred. The expression that follows the keyword switch must be enclosed within parentheses.

## Error C8083

### Message

'text' : missing ')' after switch

### Description

The character or characters specified by *text* were encountered in a switch...endswitch block at a location where a right parenthesis was expected.

### Troubleshooting Information

Examine the switch statement in which this error occurred. The expression that follows the keyword switch must be enclosed within parentheses.

## Error C8084

### Message

'text' : missing 'case' after switch

### Description

The character or characters specified by *text* were encountered in a switch...endswitch block at a location where a case statement was expected.

### Troubleshooting Information

This error will occur if the switch statement is terminated with a semicolon or is not followed immediately by a case statement.

## Error C8085

### Message

'text' : missing '='

### Description

The character or characters specified by *text* were encountered in a for...endfor block at a location where an equal sign was expected.

### Troubleshooting Information

This error occurs when the equal sign is missing in the expression that follows the keyword for. Examine the for statement at which the error occurred and verify that the expression that follows the keyword for is structured correctly.

## Error C8086

### Message

'text' : missing 'to' or 'downto'

### Description

The character or characters specified by *text* were encountered in a for...endfor block at a location where an equal sign was expected.

### Troubleshooting Information

This error occurs when the keyword to or downto is missing in a for statement.

## Error C8087

### Message

cannot return value from program

### Description

The main program block contains a return statement. You cannot return a value from a program.

### Troubleshooting Information

Remove the return statement from the program block.

## Error C8088

### Message

'endif' : not inside if statement

### Description

The keyword endif could not be matched to a previous if statement.

### Troubleshooting Information

Examine the if...endif block at the error location. Verify that the keyword endif has a corresponding if statement. This error is often triggered after an earlier error in an if...endif block.

## Error C8089

### Message

'endfor' : not inside for statement

### Description

The keyword endfor could not be matched to a previous for statement.

### Troubleshooting Information

Examine the for...endfor block at the error location. Verify that the keyword endfor has a corresponding for statement. This error is often triggered after an earlier error in a for...endfor block.

## Error C8090

### Message

'until' : not inside repeat statement

### Description

The keyword until could not be matched to a previous repeat statement.

## Troubleshooting Information

Examine the repeat...until block at the error location. Verify that the keyword until has a corresponding repeat statement. This error is often triggered after an earlier error in a repeat...until block.

### Error C8091

#### Message

'endwhile' : not inside while statement

#### Description

The keyword endwhile could not be matched to a previous while statement.

#### Troubleshooting Information

Examine the while...endwhile block at the error location. Verify that the keyword endwhile has a corresponding while statement. This error is often triggered after an earlier error in a while...endwhile block.

### Error C8092

#### Message

'name' : function called but not defined

#### Description

The function specified by *name* has been prototyped and called in the body of the script, but it has not been defined.

#### Troubleshooting Information

This error can occur if the function name is not spelled identically in the prototype, the function call and the function definition. It can also occur if the function definition appears in a file that should have been included (with an #include statement) but was not.

### Error C8093

#### Message

'name' : size required for string in typedef

#### Description

The identifier specified by *name* is a string that has been defined as a member in a typedef block, but it does not include a size specification.

## Troubleshooting Information

Specify the size of all STRING declarations in a structure—InstallScript's autosizing feature does not work in typedef statements.

### Error C8097

#### Message

'text' :syntax error

#### Description

The character or characters specified by *text* triggered an unclassified syntax error.

#### Troubleshooting Information

This error message is triggered for syntax errors for which there is not a specific error message.

### Error C8098

#### Message

'text' : missing '.name' after DLL name

#### Description

The character or characters specified by *text* were encountered after a DLL file name, where a function in the DLL file was expected.

#### Troubleshooting Information

When calling a function from a DLL, specify the function name, not the DLL file name.

### Error C8099

#### Message

'text' : DLL function name expected

#### Description

The character or characters specified by *text* were encountered after a DLL file name, where a function in the DLL file was expected.

#### Troubleshooting Information

This error occurs when the function name specified with a DLL file name has not been declared in a prototype statement. Verify that this function has been prototyped; if it has, check the spelling of the function name.

## Error C8100

### Message

'name' : function not defined for this DLL

### Description

The function specified by *name* has not been prototyped for the DLL whose name precedes it.

### Troubleshooting Information

This error occurs when you have prototyped functions from two or more DLLs and then called one of those functions with the wrong DLL name.

## Error C8101

### Message

'name' : must specify DLL for this function

### Description

The function specified by *name* was prototyped twice from two different DLLs.

### Troubleshooting Information

When calling functions with identical names from two or more DLLs, you must qualify the function name by prefixing it with the DLL name followed by a period, as in the example below:

```

    prototype MYDLL.UsefulFunction(INT, POINTER);
    prototype YOURDLL.UsefulFunction(INT, POINTER);

    export prototype MyFunc(HWND);

function MyFunc(hMSI)
    NUMBER nValue;
    POINTER psvString;
begin
    MYDLL.UsefulFunction(nValue, psvString);
end;
```

## Error C8112

### Message

'name' : typedef includes instance of self

### Description

The data type of the member specified by *name* is invalid. A typedef cannot contain a member that is an instance of itself.

## Troubleshooting Information

Restructure your typedefs to avoid this error.

### Error C8113

#### Message

'external' : local variables cannot be external

#### Description

The keyword external was encountered in data declaration within a function block.

#### Troubleshooting Information

Data that is local to a function cannot be declared external.

### Error C8114

#### Message

'text' : preprocessor user define error

#### Description

This message is triggered by an #error directive.

### Error C8115

---

**Project** ▪ This information applies to InstallScript projects.

#### Message

'function name' : return type mismatch with prototype

#### Description

This message occurs when the return type of a script-defined function (the data type of the value returned by the function) is not the same in the function definition as it is in the function declaration. Note that if you do not explicitly specify a return type, the return type is assumed to be NUMBER.

### Error C8126

---

**Project** ▪ This information applies to InstallScript projects.

### Message

'text' : string variable required

### Description

The character or characters specified by *text* were encountered at a location where a string declaration was expected.

### Troubleshooting Information

To declare an array other than a character array (that is, a string), use parentheses rather than brackets; for example:

```
NUMBER nArray(3);
```

## Error C8127

### Message

label illegal within try/catch/endcatch

### Description

You cannot define a label within a try...catch...endcatch statement.

### Troubleshooting Tips

Examine the statement at the error location. Modify your code so that a label is no longer defined within the try...catch...endcatch statement.

## Error C8128

### Message

goto illegal within try/catch/endcatch

### Description

You cannot use a goto statement within a try...catch...endcatch statement.

### Troubleshooting Tips

Examine the statement at the error location. Modify your code so that a goto statement is no longer used within the try...catch...endcatch statement.

## Error C8522

---

**Project** ▪ This information applies to InstallScript projects.

## Message

Access is denied.

## Description

InstallShield could not open the specified file.

## Troubleshooting Information

This error message may occur because the specified file is read-only. In the Windows Explorer, locate the file and check its properties.

# InstallScript Fatal Errors

Fatal errors are those that prevent the compilation from continuing. They are caused by missing include files, incorrectly specified file names, disk I/O errors, and insufficient system resources; the compiler also has certain built-in limitations, such as the limit on include files, that will trigger a fatal error if exceeded.

**Table 19** ■ InstallScript Fatal Errors

Error	Message
<b>F8501</b>	I/O error on action file
<b>F8502</b>	I/O error on debug file
<b>F8503</b>	Can't open script input file
<b>F8504</b>	Can't open .inx output file
<b>F8505</b>	Can't open .dbg debug file
<b>F8506</b>	out of memory
<b>F8508</b>	too many macro expansions in line
<b>F8509</b>	invalid delimiter for include file name
<b>F8510</b>	missing delimiter for include file name
<b>F8511</b>	can't open include file
<b>F8512</b>	include file plus path is too large
<b>F8513</b>	too many nested #include files
<b>F8514</b>	#if statements too deeply nested
<b>F8515</b>	macro expansion buffer overflow

**Table 19** ▪ InstallScript Fatal Errors (cont.)

Error	Message
<b>F8516</b>	maximum error count reached
<b>F8517</b>	too many include files
<b>F8518</b>	I/O error on link file
<b>F8519</b>	user define fatal error

## Error F8501

### Message

I/O error on action file

### Description

An error occurred when InstallShield attempted to access an intermediate file created during compilation.

### Troubleshooting Information

Each time you compile your setup, InstallShield creates intermediate files with the following file extensions: .dbg, .ino, .inx and .obs. After compilation, these files remain in the scripts folder. This message is displayed when an error occurs on an attempt to access the action file; that file has the extension .obs). Among the possible causes:

- The disk is full. Create more available disk space by deleting unwanted files; then compile again.
- There are insufficient system resources (file handles and/or memory). Close any other applications that are open; then compile again. If the error occurs on a system with sufficient disk space and system resources, investigate other obvious reasons why file access might fail:
  - The action file may be damaged. Rename it or delete it from the Scripts folder; then compile again.
  - If the action file is in a shared folder on a file server, verify that you have network rights to write to that folder.
  - If an action file exists from a previous compile, check that its file attributes have not been changed to read-only, system, or hidden. Check too that the file is not already open by another application or user.

## Error F8502

### Message

I/O error on debug file

### Description

An error occurred when InstallShield attempted to access an intermediate file created during compilation.

## Troubleshooting Information

Each time you compile your setup, InstallShield creates intermediate files with the following file extensions: .dbg, .ino, .inx and .obs. After compilation, these files remain in the scripts folder. This message is displayed when an error occurs on an attempt to access the debug file; that file has the extension .dbg). Among the possible causes:

- The disk is full. Create more available disk space by deleting unwanted files; then compile again.
- There are insufficient system resources (file handles and/or memory). Close any other applications that are open; then compile again. If the error occurs on a system with sufficient disk space and system resources, investigate other obvious reasons why file access might fail:
  - The debug file may be damaged. Rename it or delete it from the Scripts folder; then compile again.
  - If the debug file is in a shared folder on a file server, verify that you have network rights to write to that folder.
  - If a .dbg file exists from a previous compile, check that its file attributes have not been changed to read-only, system, or hidden. Check too that the file is not already open by another application or user.

## Error F8503

### Message

Can't open script input file

### Description

The compiler was unable to open the script file specified.

## Troubleshooting Information

Verify the location and name of the file. You may have misspelled the file name or specified an incorrect path.

## Error F8504

### Message

Can't open .inx output file

### Description

The compiler was unable to create the file for the compiled script.

## Troubleshooting Information

This error is generated if InstallShield cannot create or recreate the .inx file. Under normal circumstances, the following problems can cause this error:

- The disk is full. Create more available disk space by deleting unwanted files; then compile again.

- There are insufficient system resources (file handles and/or memory). Close any other applications that are open; then compile again. If the error occurs on a system with sufficient disk space and system resources, investigate other obvious reasons why file access might fail:
  - If the target file is in a shared folder on a file server, verify that you have network rights to write to that folder.
  - If an .inx file exists from a previous compile, check that its file attributes have not been changed to read-only, system, or hidden. Check too that the file is not already open by another application or user.

## Error F8505

### Message

Can't open .dbg debug file

### Description

The compiler was unable to create the debug file. This file contains the information required to run the script with the debugger.

### Troubleshooting Information

The following problems will cause this error:

- The disk is full. Create more available disk space by deleting unwanted files; then compile again.
- There are insufficient system resources (file handles and/or memory). Close any other applications that are open; then compile again.

If the error occurs on a system with sufficient disk space and system resources, investigate other obvious reasons why file access might fail:

- If the debug file is in a shared folder on a file server, verify that you have network rights to write to that folder.
- If a .dbg file exists from a previous compilation, check that its file attributes have not been changed to read-only, system, or hidden. Check too that the file is not already open by another application or user.

## Error F8506

### Message

Out of memory

### Description

The compiler was unable to allocate sufficient memory to complete the compilation.

### Troubleshooting Information

Close any other applications that are open; then compile again. If the problem persists, restart Windows; then load InstallShield and compile again.

## Error F8508

### Message

too many macro expansions in line

### Description

The specified line contains too many macros; the maximum number of macros per line is 100.

### Troubleshooting Information

Reduce the number of macros on the line by breaking the line into two or more lines.

## Error F8509

### Message

invalid delimiter for include file name

### Description

The file name specified after the preprocessor directive `#include` is missing the initial quotation mark or angled bracket (`<`).

### Troubleshooting Information

File names specified with the preprocessor directive `#include` must be enclosed by quotation marks ("file name") or angled brackets (`<file name>`). Insert a quotation mark or opening angled bracket before the file name. Note that if you insert an initial quotation mark, the file name must be followed by a closing quotation mark; if you insert an opening angled bracket, the file name must be followed by a closing angled bracket (`>`).

## Error F8510

### Message

missing delimiter for include file name

### Description

The file name specified after the preprocessor directive `#include` is missing the closing quotation mark or angled bracket (`>`).

### Troubleshooting Information

File names specified with the preprocessor directive `#include` must be enclosed by quotation marks ("file name") or angled brackets (`<file name>`). Insert a quotation mark or closing angled bracket after the file name. Note that if the file name has an opening quotation mark, you must insert a quotation mark after the file name; if the file name has an opening angled bracket, you must insert a closing angled bracket (`>`).

## Error F8511

### Message

cannot open include file

### Description

The compiler was unable to find or open a file that has been included in the script.

### Troubleshooting Tips

The following problems can cause this error:

- The file name in an #include statement is misspelled.
- A file name in an #include statement is specified without a full path, but the file cannot be found in the source directory.
- You do not have rights to open files on the network drive where the file resides.
- The file is damaged.

## Error F8512

### Message

include file plus path is too large

### Description

The path specified in an #include statement exceeds the maximum length of 256 characters

### Troubleshooting Information

Move the included files to a folder that can be referenced with a path whose length is less than 256 characters.

## Error F8513

### Message

too many nested #include files

### Description

InstallScript allows nesting of include files up to a maximum of 8 levels. This limit has been exceeded.

### Troubleshooting Information

Reduce the number of nested levels.

## Error F8514

### Message

#if statements too deeply nested

### Description

InstallScript allows nesting of #if statements up to a maximum of 10 levels. This limit has been exceeded.

### Troubleshooting Information

Reduce the number of nested levels.

## Error F8515

### Message

macro expansion buffer overflow

### Description

The expansion of macros in the error line exceeds the maximum of 1024 characters.

### Troubleshooting Information

Restructure your code to eliminate this error.

## Error F8516

### Message

maximum error count reached

### Description

The maximum number of errors specified on the Compile/Link tab of the Settings dialog box has been reached.

### Troubleshooting Information

For more information about the Compile/Link tab of the Settings dialog box, see [Compile/Link Tab](#).

## Error F8517

### Message

too many include files

## Description

The maximum number of include was exceeded.

## Troubleshooting Information

A setup script can include no more than 100 source files. Combine two or more source files to bring the total number down to 100.

## Error F8518

### Message

I/O error on link file

### Description

An error occurred when InstallShield attempted to write to the link file.

### Troubleshooting Information

Each time you compile your setup, InstallShield creates intermediate files with the following file extensions: .dbg, .ino, .inx and .obs. After compilation, these files remain in the scripts folder. This message is displayed when an error occurs on an attempt to access the link file (.ino).

This error might be caused by the following:

- The disk is full. Create more available disk space by deleting unwanted files and then recompile.
- The link file is damaged. Rename it or delete it from Scripts folder and then recompile.

## Error F8519

### Message

user define fatal error

### Description

This message is triggered by an #error directive.

## InstallScript Internal Errors

An internal error may occur if syntax errors exist.

C9001 internal error

## Error C9001

### Message

'text' : internal error

### Description

The character or characters specified by *text* triggered an unclassified syntax error.

### Troubleshooting Information

This error message is triggered by syntax errors for which there is not a specific error message.

## InstallScript Warnings

The compiler issues warning messages to alert you to irregularities in the script that may result in inefficiencies or run-time errors.

**Caution** - Warnings do not interrupt script compilation unless “Warnings as errors” is selected in the Compiler Settings dialog, or if the number of warnings exceeds the maximum specified. The default maximum value is 50.

**Table 20** - InstallScript Warnings

Warning Number	Message
<b>C7501</b>	macro redefinition
<b>C7502</b>	string/array size exceeds recommended limit
<b>C7503</b>	function defined but never called
<b>C7505</b>	typedef definition differs from previous

## Warning C7501

### Message

'name' : macro redefinition

### Description

The identifier specified by *name* has already been used in a #define statement.

### Troubleshooting Information

If the second definition is simply a duplicate of the first, delete it. If you intended the second definition to be different from the first, rename the identifier in the second definition and update all statements in the script that reference it.

## Warning C7502

### Message

'size' : string/array size exceeds recommended limit

### Description

The numeric value specified by *size* indicates the size of a string or array that is larger than InstallScript's recommended maximum.

### Troubleshooting Information

To avoid unexpected effects, reduce the size of the array.

## Warning C7503

### Message

'name' : function defined but never called

### Description

The function specified by *name* is not called in your setup.

### Troubleshooting Information

To reduce the size of your setup, remove the unused function from your script.

## Warning C7505

### Message

'name' : typedef definition differs from previous

### Description

The data structure specified by *name* is defined in multiple library files (.obl files).

### Troubleshooting Information

If the definitions are simply duplicates, delete all but one. If you intended the definitions to be different, rename the data structures to have unique names and update all statements in the script that reference them.

# Virtualization Conversion Errors and Warnings

When you are converting a Windows Installer package to a virtual application, errors and warnings may occur. Some of the errors and warnings are applicable to any type of package virtualization, and others are specific to the virtualization solution for which you are preparing packages.

## Error -9000: Unknown Exception

The following table documents this message:

**Table 1** ▪ Error -9000: Unknown Exception

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unknown exception occurred.
<b>Cause:</b>	This is an unexpected internal error.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9001: Unknown COM

The following table documents this message:

**Table 2** ▪ Error -9001: Unknown COM

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Internal error.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9002: Error Opening Package

The following table documents this message:

**Table 3** ▪ Error -9002: Error Opening Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred when opening the package.

**Table 3** • Error -9002: Error Opening Package

Category	Description
<b>Cause:</b>	This is an unexpected internal error when reading the Windows Installer package.
<b>Resolution:</b>	<p>Check to make sure that the package is accessible to the user. If the error persists and the package is on a network share, copy the package locally (to avoid any network connection issues) and try again.</p> <p>If this does not solve the problem, perform these additional <a href="#">investigational steps</a> and then contact InstallShield Technical Support.</p>

## Error -9003: Error Saving Package

The following table documents this message:

**Table 4** • Error -9003: Error Saving Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred when saving the package.
<b>Cause:</b>	This is an unexpected internal error when trying to save the Citrix profile.
<b>Resolution:</b>	<p>Check to see if the user has proper access to the location the profile is being built to.</p> <p>If this does not solve the problem, perform these additional <a href="#">investigational steps</a> and then contact InstallShield Technical Support.</p>

## Error -9004: Process Cancelled By User

The following table documents this message:

**Table 5** • Error -9004: Process Cancelled By User

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Process cancelled by user.
<b>Cause:</b>	The user clicked the <b>Cancel</b> button to stop the build.
<b>Resolution:</b>	Restart the build process.

## Error -9005: Error Creating Temporary Folder

The following table documents this message:

**Table 6** ▪ Error -9005: Error Creating Temporary Folder

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred while creating a temporary folder
<b>Cause:</b>	You encounter this error when the user does not have permission to write to C:\TMP, or the drive is out of disk space.
<b>Resolution:</b>	Obtain write access to C:\TMP, and free some disk space on the drive, and then rebuild the profile.

## Error -9006: Error Decompressing Package

The following table documents this message:

**Table 7** ▪ Error -9006: Error Decompressing Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred while decompressing the package 'PackageName'.
<b>Cause:</b>	You encounter this error when the package is a compressed Windows Installer package (.msi) and errors were generated when InstallShield attempted to perform an administrative installation to extract the files.
<b>Resolution:</b>	<p>When this error occurred, you should have also received a return error code from Windows Installer. Look up that error code in the <a href="#">Windows Installer Help Library</a> to determine the cause of the problem.</p> <p>If you did not receive a return error code from Windows Installer, this error could have been caused by the package not being authored properly. In the Windows Installer package, check to see if the AdminExecuteSequence table was defined. If that table is missing, the package cannot be decompressed.</p>

## Error -9007: File With Extension Not Found

The following table documents this message:

**Table 8** • Error -9007: File With Extension Not Found

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	No file found with the extension 'ComponentKeyName'.
<b>Cause:</b>	This is an unexpected error that occurred when file extensions were being processed.
<b>Resolution:</b>	Check to make sure that the executable for the file extension exists and that it is set as the key file in its component.

## Error -9008: Error Extracting Icon

The following table documents this message:

**Table 9** • Error -9008: Error Extracting Icon

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred while extracting the icon 'IconKeyName'
<b>Cause:</b>	This is an unexpected error that occurred when an icon listed in the Icon table was being extracted.
<b>Resolution:</b>	Verify that the Icon entry in the Icon table is valid. If necessary, replace it with a valid icon.

## Error -9009: Unknown Provider

The following table documents this message:

**Table 10** • Error -9009: Unknown Provider

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The specified provider is unknown 'ProviderName'.
<b>Cause:</b>	This is an unexpected internal error.

**Table 10** ▪ Error -9009: Unknown Provider

Category	Description
<b>Resolution:</b>	Invalid data may have been modified via the Direct Editor causing this error. Delete the <b>Release</b> you are building, and then create a new one and rebuild.

## Error -9010: Invalid Target File Name

The following table documents this message:

**Table 11** ▪ Error -9010: Invalid Target File Name

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The target file name is invalid. 'FileName'
<b>Cause:</b>	This is an unexpected internal error.
<b>Resolution:</b>	Invalid data may have been modified via the Direct Editor causing this error. Verify the <b>Name</b> field on the Citrix Assistant / ThinApp Assistant <b>Profile Information</b> page and make sure the name does not contain any invalid file name characters.

## Error -9011: Error Reading MSI Table

The following table documents this message:

**Table 12** ▪ Error -9011: Error Reading MSI Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error reading MSI table 'TableName'
<b>Cause:</b>	This is an unexpected error that occurred when the specified Windows Installer table was being processed.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9012: Unexpected Error in Method

The following table documents this message:

**Table 13** ▪ Error -9012: Unexpected Error in Method

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error in method 'MethodName'
<b>Cause:</b>	This is an unexpected internal error.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9013: Type Library Not Found

The following table documents this message:

**Table 14** ▪ Error -9013: Type Library Not Found

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Type library not found: 'TypeLibraryName'
<b>Cause:</b>	You encounter this error when a type library file was not found when trying to extract COM information.
<b>Resolution:</b>	Check to see if the type library file exists in the proper location when building the profile.  If this does not resolve the problem, perform <a href="#">these additional investigational steps</a> and then contact InstallShield Technical Support.

## Error -9014: ShellExecute Failed

The following table documents this message:

**Table 15** ▪ Error -9014: ShellExecute Failed

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	ShellExecute failed: 'CommandLine'
<b>Cause:</b>	You encounter this error when the specified command line failed to launch a process.

**Table 15** ▪ Error -9014: ShellExecute Failed

Category	Description
<b>Resolution:</b>	<p>Check to see if the executable file name shown is a valid file and that the user has the proper access rights to run it.</p> <p>If this does not resolve the problem, perform <a href="#">these additional investigational steps</a> and then contact InstallShield Technical Support.</p>

## Error -9015: Unable to Determine Full Path for Driver

The following table documents this message:

**Table 16** ▪ Error -9015: Unable to Determine Full Path for Driver

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Unable to determine the full path for driver 'DriverName'
<b>Cause:</b>	You encounter this error when a driver referenced in the ODBCDataSource table is not being installed by the package.
<b>Resolution:</b>	<p>This error can be resolved in one of two ways:</p> <p><b>Editing the Windows Installer Package</b></p> <ol style="list-style-type: none"><li>1. Edit the package in InstallShield using Direct Edit mode.</li><li>2. Navigate to the ISVirtualPackage table.</li><li>3. Create an entry as follows to identify the full path of the missing driver:  <b>Name:</b> &lt;DriverName&gt; Description <b>Value:</b> Path to Driver</li></ol> <p><b>Manually Installing the Driver</b></p> <p>Install the missing driver on your machine and then rebuild the Citrix profile.</p>

## Warning -9016: Contents of Table Ignored

The following table documents this message:

**Table 17** ▪ Warning -9016: Contents of Table Ignored

Category	Description
<b>Type:</b>	Warning

**Table 17** ▪ Warning -9016: Contents of Table Ignored

Category	Description
<b>Message:</b>	Contents of table 'TableName' will be ignored
<b>Cause:</b>	This error message identifies a known limitation of Citrix conversion.
<b>Resolution:</b>	If the contents of the table is deemed critical, repackage the application, and then rebuild the Citrix profile.

## Warning -9017: .NET 1.x Assembly Not Supported

The following table documents this message:

**Table 18** ▪ Warning -9017: .NET 1.x Assembly Not Supported

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Assembly 'AssemblyName' is a .NET 1.x assembly and will not be converted correctly. Only .NET 2.0/3.0 assemblies are currently supported. You may wish to repackage this package first.
<b>Cause:</b>	You encounter this error when attempting to convert a package containing a .NET 1.x assembly. Only .NET 2.0/3.0 assemblies are currently supported.
<b>Resolution:</b>	Repackage the application, and then rebuild the Citrix profile.

## Warning -9018: Custom Actions Ignored

The following table documents this message:

**Table 19** ▪ Warning -9018: Custom Actions Ignored

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Custom action 'CustomActionName' will be ignored.

**Table 19** ▪ Warning -9018: Custom Actions Ignored

Category	Description
<b>Cause:</b>	<p>When converting a Windows Installer package to a Citrix profile, all custom actions are ignored. Any modifications to a target machine that a custom action in this Windows Installer package may create will not be propagated into the Citrix profile.</p>  <p><b>Note</b> ▪ When a custom action that does not modify the system or perform any part of the installation (such as a predefined custom action or a Type 19 custom action) is encountered, no message is generated. If a Type 51 custom action is encountered (which sets a property from a formatted text string), it is automatically resolved. If a Type 35 custom action is encountered, it is resolved only if it is referenced in the Directory table.</p>
<b>Resolution:</b>	<p>The resolution that you should perform depends upon the purpose of the custom action:</p> <ul style="list-style-type: none"><li>• If the custom action merely automatically enters a value or makes some other kind of minor modification, you can ignore this warning.</li><li>• If the custom action does something which could change the behavior of the installation (such as setting a Property), you may need to resolve this issue.</li></ul> <p>To resolve this issue, first attempt to launch the converted package on Citrix XenApp. If you receive any application errors, you need to repackage this application.</p>  <p><b>To repackage a Windows Installer package to capture custom action functionality:</b></p> <ol style="list-style-type: none"><li>1. Use the Repackaging Wizard to repackage this application. The Repackaging Wizard monitors system changes as an application is installed, and then that data is converted into a Repackager project.</li><li>2. Build the Repackager project to generate a revised Windows Installer package. This new Windows Installer package does not contain any custom actions, but (as a result of being repackaged) it will include the functionality performed by the original custom action.</li></ol>

## Warning -9019: Conditionalized Components

The following table documents this message:

**Table 20** ▪ Warning -9019: Conditionalized Components

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	There exist one or more conditionalized components which may not be converted correctly

**Table 20** ▪ Warning -9019: Conditionalized Components

Category	Description
<b>Cause:</b>	This warning is generated when attempting to convert conditionalized components because conditions on components are not evaluated. As a result, InstallShield includes the component in the virtual package.
<b>Resolution:</b>	If you do not want to include the component in the virtual package, modify your .msi package or your project file to exclude that component. Then rebuild the virtual application. If you do want the virtual package to contain this component, you can ignore this warning.

## Error -9020: Directory With Null Parent

The following table documents this message:

**Table 21** ▪ Error -9020: Directory With Null Parent

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Directory 'DirectoryName' has a null parent and will be ignored.
<b>Cause:</b>	This error occurs if a directory table entry (other than TARGETDIR) is null.
<b>Resolution:</b>	Evaluate the ThinApp application to see if it works. If it does not work properly, you may want to consider repackaging the package.

## Error -9021: Unable to Extract COM Data

The following table documents this message:

**Table 22** ▪ Error -9021: Unable to Extract COM Data

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unable to extract COM data for 'FileName'
<b>Cause:</b>	<p>This Windows Installer package has an entry in the TypeLib or SelfReg table that contains COM data that InstallShield cannot convert to application data.</p> <p>Depending upon which file cannot be COM extracted, it is possible that this application will still work properly in Citrix XenApp isolation environment if you repackage this Windows Installer package with COM table mapping turned off.</p> <p>COM data is stored in the Windows Registry. So, if you repackage this Windows Installer package, the capture process will be able to obtain all of this data because it captures all modifications to the Registry and does not have to rely on COM extraction.</p>
<b>Resolution:</b>	To resolve this issue, you need to repackage your Windows Installer package with COM table mapping turned off.

## Error -9022: Complus Table

The following table documents this message:

**Table 23** ▪ Error -9022: Complus Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'Complus'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a Complus table. During the conversion process, the Complus table is not read.
<b>Resolution:</b>	The Complus table contains information needed to install COM+ applications. While Citrix XenApp supports communicating with COM+ applications, it does not support <i>installing</i> COM+ services. Therefore, this application cannot be deployed on Citrix XenApp.

## Error -9024: FileSFPCatalog

The following table documents this message:

**Table 24** ▪ Error -9024: FileSFPCatalog

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'FileSFPCatalog'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>FileSFPCatalog</b> table. During the conversion process, the <b>FileSFPCatalog</b> table is not read.
<b>Resolution:</b>	The <b>FileSFPCatalog</b> table associates specified files with the catalog files used by system file protection. If this file is necessary for the function of the application, you need to use Repackager to repack the application.

## Warning -9026: LaunchCondition Table

The following table documents this message:

**Table 25** ▪ Warning -9026: LaunchCondition Table

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The conversion process does not support data in the MSI table 'LaunchCondition'.
<b>Cause:</b>	You encounter this warning when the Windows Installer package that you are converting includes a LaunchCondition table. During the conversion process, the <b>LaunchCondition</b> table is not read.

**Table 25** ▪ Warning -9026: LaunchCondition Table

Category	Description
<b>Resolution:</b>	<p>The <b>LaunchCondition</b> table contains a list of conditions that all must be satisfied for the installation to begin. For example, if an application requires Windows XP to run, Windows XP is listed in the <b>LaunchCondition</b> table. Because this table is not read, no check is performed. Therefore, when a user on an operating system other than Windows XP launches this Citrix profile, the application may not function properly.</p> <p>To resolve this issue, perform one of the following tasks:</p> <ul style="list-style-type: none"><li>● <b>Option 1: Set Requirements on the Profile Requirements Page</b>—If the launch conditions only include operating system, service pack, and language requirements, open this package in the Citrix Assistant, and set those Operating System and Language requirements on the <b>Profile Requirements</b> page. Then deploy this application as a Citrix profile.</li><li>● <b>Option 2: Determine if Launch Conditions are Met</b>—Review the launch conditions listed in the table, and determine if the desktops in your enterprise meet those requirements. If all of the desktops meet those requirements, you can deploy this application as a Citrix profile.</li></ul> <p>If the desktops do not meet those requirements (such as having Internet Explorer 6.0 instead of 7.0), upgrade those desktops to meet these requirements, and then deploy this application as a Citrix profile.</p>

## Warning -9027: LockPermissions Table

The following table documents this message:

**Table 26** ▪ Warning -9027: LockPermissions Table

Category	Description
<b>Type</b>	Warning
<b>Message:</b>	The conversion process does not support data in the MSI table 'LockPermissions'.
<b>Cause:</b>	You encounter this warning when the Windows Installer package that you are converting includes a LockPermissions table. During the conversion process, the LockPermissions table is not read.
<b>Resolution:</b>	<p>The <b>LockPermissions</b> table is used to secure individual portions of your application (files, registry keys, and created folders) in a locked-down environment.</p> <p>Citrix does not support permissions on files, registry keys, or created folders. You cannot modify permissions on any of the application's ACLs (access control lists). Because users will have full permissions when running this application in the isolation environment, this warning will not result in any problems.</p>

## Error -9028: MoveFile Table

The following table documents this message.

**Table 27** ■ Error -9028: MoveFile Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'MoveFile'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a MoveFile table. During the conversion process, the MoveFile table is not read.
<b>Resolution:</b>	<p>This MoveFile table contains a list of files to be moved or copied from a specified source directory to a specified destination directory. Because this table is not read, you need to do one of the following to resolve this issue:</p> <ul style="list-style-type: none"><li>● <b>Option 1: Edit the Windows Installer Package</b>—Open the Windows Installer package in InstallShield and modify it to eliminate the use of the <b>MoveFile</b> table by installing additional files in the specified directories.</li><li>● <b>Option 2: Repackage the Application</b>—Use the Repackaging Wizard to repackage this application, and then build the Repackager project to generate a revised Windows Installer package.</li><li>● <b>Option 3: Write a Pre-Launch Script</b>—Write a pre-launch script that performs the file moving operations identified in the <b>MoveFile</b> table upon application launch.</li></ul>

## Error -9029: MsiDriverPackages Table

The following table documents this message:

**Table 28** ■ Error -9029: MsiDriverPackages Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'MsiDriverPackages'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>MsiDriverPackages</b> table. During the conversion process, the <b>MsiDriverPackages</b> table is not read.

**Table 28** ▪ Error -9029: MsiDriverPackages Table

Category	Description
<b>Resolution:</b>	<p>The <b>MsiDriverPackages</b> table includes one record for each driver package component in the application.</p> <p>Citrix XenApp does not support any type of driver. For example, when installing a printer, you can install the printer software within the isolation environment, but not the printer drivers.</p> <p>Therefore, to resolve this issue, you need to install any required drivers outside of the isolation environment on the user desktop machines.</p>

## Warning -9030: ODBCTranslator Table

The following table documents this message:

**Table 29** ▪ Warning -9030: ODBCTranslator Table

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The conversion process does not support data in the MSI table 'ODBCTranslator'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ODBCTranslator</b> table. During the conversion process, the <b>ODBCTranslator</b> table is not read.
<b>Resolution:</b>	<p>The <b>ODBCTranslator</b> table lists the ODBC translators belonging to the installation. ODBC translators translate one form of raw data into another form that can be used with a specific database type.</p> <p>Ignoring the <b>ODBCTranslator</b> table should not prevent your application from functioning properly. However, if it does, you need to use Repackager to repackage the application.</p>

## Warning -9031: RemoveFile Table

The following table documents this message:

**Table 30** ▪ Warning -9031: RemoveFile Table

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The conversion process does not support data in the MSI table 'RemoveFile'.

**Table 30** ▪ Warning -9031: RemoveFile Table

Category	Description
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>RemoveFile</b> table. During the conversion process, the <b>RemoveFile</b> table is not read. This warning is displayed only if the application installation removes files during install (not uninstall).
<b>Resolution:</b>	<p>The <b>RemoveFile</b> table contains a list of files to be removed. If this file removal requirement is just a clean-up step, that does not impact the function of the application, you do not need to address this issue.</p> <p>However, if the existence of the files listed in the <b>RemoveFile</b> table prevents the application from functioning, you need to set the isolation option of the files to <b>Ignore</b> so that they are not visible to the isolation environment. The <b>Ignore</b> option directs the isolation environment to always look for the file on the system (ignoring the one inside the isolation environment).</p>

## Warning -9032: RemoveIniFile Table

The following table documents this message:

**Table 31** ▪ Warning -9032: RemoveIniFile Table

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The conversion process does not support data in the MSI table 'RemoveIniFile'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>RemoveIniFile</b> table. During the conversion process, the <b>RemoveIniFile</b> table is not read.
<b>Resolution:</b>	The <b>RemoveIniFile</b> table contains the information an application needs to delete from a .ini file. If the removal of this entry is necessary for the function of the application, you need to use Repackager to repackage the application.

## Warning -9033: RemoveRegistry Table

The following table documents this message:

**Table 32** ▪ Warning -9033: RemoveRegistry Table

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The conversion process does not support data in the MSI table 'RemoveRegistry'.

**Table 32** ▪ Warning -9033: RemoveRegistry Table

Category	Description
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>RemoveRegistry</b> table. During the conversion process, the <b>RemoveRegistry</b> table is not read.
<b>Resolution:</b>	<p>The <b>RemoveRegistry</b> table contains the registry information the application needs to delete from the system registry. If this removal requirement is just a clean-up step, that does not impact the function of the application, you do not need to address this issue.</p> <p>However, if the existence of the registry keys listed in the <b>RemoveRegistry</b> table prevents the application from functioning, you need to set the isolation option of the registry keys to <b>Ignore</b> so that they are not visible to the isolation environment. The <b>Ignore</b> option directs the isolation environment to always look for the registry key on the system (ignoring the one inside the isolation environment).</p>

## Error -9036: ISCEInstall Table

The following table documents this message:

**Table 33** ▪ Error -9036: ISCEInstall Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'ISCEInstall'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ISCEInstall</b> table. During the conversion process, the <b>ISCEInstall</b> table is not read.
<b>Resolution:</b>	The <b>ISCEInstall</b> table is used to install Windows mobile applications. The conversion of mobile applications to Citrix profiles is not supported.

## Error -9037: ISComPlusApplication Table

The following table documents this message:

**Table 34** ▪ Error -9037: ISComPlusApplication Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'ISComPlusApplication'.

**Table 34** ▪ Error -9037: ISComPlusApplication Table

Category	Description
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ISComPlusApplication</b> table. During the conversion process, the <b>ISComPlusApplication</b> table is not read.
<b>Resolution:</b>	The <b>ISComPlusApplication</b> table contains information about COM+ applications. While Citrix XenApp supports communicating with COM+ applications, it does not support <i>installing</i> COM+ services. Therefore, this application cannot be deployed on Citrix XenApp.

## Error -9038: ISPalmApp Table

The following table documents this message:

**Table 35** ▪ Error -9038: ISPalmApp Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'ISPalmApp'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ISPalmApp</b> table. During the conversion process, the <b>ISPalmApp</b> table is not read.
<b>Resolution:</b>	The <b>ISPalmApp</b> table is used to install Palm mobile applications. The conversion of mobile applications to Citrix profiles is not supported.

## Error -9039: ISSQLScriptFile Table

The following table documents this message:

**Table 36** ▪ Error -9039: ISSQLScriptFile Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'ISSQLScriptFile'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ISSQLScriptFile</b> table. During the conversion process, the <b>ISSQLScriptFile</b> table is not read.

**Table 36** ▪ Error -9039: ISSQLScriptFile Table

Category	Description
<b>Resolution:</b>	<p>The <b>ISSQLScriptFile</b> table lists SQL scripts. When a Windows Installer package is installed, it can run an SQL script to update a database. An application running as a Citrix profile cannot update a database.</p> <p>To resolve this issue, you need to update the database prior to using the converted Citrix profile using one of the following methods:</p> <ul style="list-style-type: none"><li>• Use scripts to update the database manually.</li><li>• Update it by running the Windows Installer installation on one of the machines in your network that has access to that database.</li></ul>

## Error -9040: ISVRoot Table

The following table documents this message:

**Table 37** ▪ Error -9040: ISVRoot Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'ISVRoot'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ISVRoot</b> table. During the conversion process, the <b>ISVRoot</b> table is not read.
<b>Resolution:</b>	The <b>ISVRoot</b> table installs a Web site. An application running as a Citrix profile in an isolation environment cannot create a Web site. Therefore, creating Citrix profiles for applications that create Web sites during installation is not supported.

## Error -9041: ISXmlFile Table

The following table documents this message:

**Table 38** ▪ Error -9041: ISXmlFile Table

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The conversion process does not support data in the MSI table 'ISXmlFile'.
<b>Cause:</b>	You encounter this error when the Windows Installer package that you are converting includes a <b>ISXmlFile</b> table. During the conversion process, the <b>ISXmlFile</b> table is not read.

**Table 38** ▪ Error -9041: ISXmlFile Table

Category	Description
<b>Resolution:</b>	The <b>ISXmlFile</b> table modifies XML files. If the modification of XML files is required in order for this application to operate properly, you need to use Repackager to repackage this application.

## Error -9051: Package Decompression Canceled

The following table documents this message:

**Table 39** ▪ Error -9051: Package Decompression Canceled

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Package decompression canceled by the user
<b>Cause:</b>	The user cancelled the process of decompression of compressed MSI packages.

## Error -9100: CreateInstance of Package Object Failed

The following table documents this message:

**Table 40** ▪ Error -9100: CreateInstance of Package Object Failed

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	CreateInstance of the Citrix package object failed.
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9101: Create Operation of Package Object Failed

The following table documents this message:

**Table 41** ▪ Error -9101: Create Operation of Package Object Failed

Category	Description
<b>Type:</b>	Error

**Table 41** ▪ Error -9101: Create Operation of Package Object Failed

Category	Description
<b>Message:</b>	Create operation on Citrix package object failed 'ObjectName'.
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9102: Failed to Write Header Information

The following table documents this message:

**Table 42** ▪ Error -9102: Failed to Write Header Information

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Failed to write package header information.
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9103: Citrix Finalization Failed

The following table documents this message:

**Table 43** ▪ Error -9103: Citrix Finalization Failed

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Citrix Finalization Failed
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9104: Citrix Save Failed

The following table documents this message:

**Table 44** • Error -9104: Citrix Save Failed

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Citrix Save Failed
<b>Cause:</b>	Unexpected internal error. This error may sometimes occur when the profile is to be digitally signed.
<b>Resolution:</b>	Deselect the option to digitally sign the Citrix profile and then rebuild it.

## Error -9105: Error Initializing Citrix Writer

The following table documents this message:

**Table 45** • Error -9105: Error Initializing Citrix Writer

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error initializing Citrix writer
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9106: Error Initializing Citrix Package

The following table documents this message:

**Table 46** • Error -9106: Error Initializing Citrix Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error initializing Citrix package
<b>Cause:</b>	Unexpected internal error.

**Table 46** ▪ Error -9106: Error Initializing Citrix Package

Category	Description
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9107: Error Writing Citrix File Entries

The following table documents this message:

**Table 47** ▪ Error -9107: Error Writing Citrix File Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing Citrix file entries.
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9108: Error Determining Source File Path

The following table documents this message:

**Table 48** ▪ Error -9108: Error Determining Source File Path

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error determining source file path for 'FileName'
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9109: Error Writing Citrix Folder Entries

The following table documents this message:

**Table 49** - Error -9109: Error Writing Citrix Folder Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing Citrix folder entries
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9110: Error Writing Citrix Registry Entries

The following table documents this message:

**Table 50** - Error -9110: Error Writing Citrix Registry Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing Citrix registry entries
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	First check to see if the product was installed properly. Then, perform <a href="#">preliminary investigational steps</a> and contact InstallShield Technical Support.

## Error -9113: Error Writing Citrix INI File Entries

The following table documents this message:

**Table 51** - Error -9113: Error Writing Citrix INI File Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing Citrix INI file entries
<b>Cause:</b>	Unexpected internal error.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9114: Error Writing Citrix Shortcuts

The following table documents this message:

**Table 52** ▪ Error -9114: Error Writing Citrix Shortcuts

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing Citrix shortcuts
<b>Cause:</b>	A catastrophic error has occurred while writing shortcuts to the profile.
<b>Resolution:</b>	Verify that shortcuts point to a valid file. Try to narrow down issue by only keeping one shortcut and then try to rebuild.

## Error -9115: Error Saving Citrix Profile

The following table documents this message:

**Table 53** ▪ Error -9115: Error Saving Citrix Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error saving Citrix profile
<b>Cause:</b>	A catastrophic error has occurred while saving the Citrix profile.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9116: Error Creating Empty Citrix Profile

The following table documents this message:

**Table 54** ▪ Error -9116: Error Creating Empty Citrix Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error creating empty Citrix profile
<b>Cause:</b>	InstallShield is unable to create a new internal instance of a Citrix profile.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9117: Error Creating Intermediate Folder

The following table documents this message:

**Table 55** ▪ Error -9117: Error Creating Intermediate Folder

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error creating intermediate folder
<b>Cause:</b>	InstallShield is unable to create the intermediate folder used for the build. This error could occur if the user does not have permission to write to C:\TMP.
<b>Resolution:</b>	Obtain write access to C:\TMP and then rebuild the profile.

## Error -9118: Error Initializing Citrix Profile

The following table documents this message:

**Table 56** ▪ Error -9118: Error Initializing Citrix Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error initializing Citrix profile.
<b>Cause:</b>	The initial values on the new profile could not be set.
<b>Resolution:</b>	Check the package name, description, version, and security settings for any possible causes.

## Error -9119: Error Creating Default Target in Citrix Profile

The following table documents this message:

**Table 57** ▪ Error -9119: Error Creating Default Target in Citrix Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error creating default target in Citrix profile
<b>Cause:</b>	Initial target in the new profile could not be created.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9120: Error Deleting File From Profile

The following table documents this message:

**Table 58** ▪ Error -9120: Error Deleting File From Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error deleting file 'FileName' from profile
<b>Cause:</b>	Specified file could not be deleted from profile.
<b>Resolution:</b>	<p>Check to see if the file exists and if the user has access rights to the file.</p> <p>If that did not resolve the problem, perform these additional <a href="#">investigational steps</a> and then contact InstallShield Technical Support.</p>

## Error -9121: Failed to Copy File into Citrix Profile

The following table documents this message:

**Table 59** ▪ Error -9121: Failed to Copy File into Citrix Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Failed to copy file into Citrix profile. Error: 'Name' File: 'Name'
<b>Cause:</b>	Specified file could not be copied into profile.
<b>Resolution:</b>	<p>Check to see if the file exists and if the user has access rights to the file.</p> <p>Also, when this error occurred, you should have also received a return error code from Windows Installer. Look up that error code in the <a href="#">Windows Installer Help Library</a> to determine the cause of the problem.</p>

## Error -9122: Target Does Not Exist in Citrix Profile

The following table documents this message:

**Table 60** ▪ Error -9122: Target Does Not Exist in Citrix Profile

Category	Description
<b>Type:</b>	Warning

**Table 60** ▪ Error -9122: Target Does Not Exist in Citrix Profile

Category	Description
<b>Message:</b>	The target for shortcut 'ShortcutName' does not exist in the Citrix profile. Excluding shortcut.
<b>Cause:</b>	Actual file that shortcut points to is not included in the package.
<b>Resolution:</b>	Exclude the shortcut by clearing the selection on the Citrix Assistant <b>Profile Shortcuts</b> page, and then rebuild the profile.

## Error -9124: No Shortcuts Created for this Profile

The following table documents this message:

**Table 61** ▪ Error -9124: No Shortcuts Created for this Profile

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	No shortcuts were created for this profile
<b>Cause:</b>	A Citrix profile must include at least one valid shortcut.
<b>Resolution:</b>	Add a shortcut on the Citrix Assistant <b>Profile Shortcuts</b> page, and then rebuild the profile.

## Error -9125: Error Writing Citrix File Type Associations

The following table documents this message:

**Table 62** ▪ Error -9125: Error Writing Citrix File Type Associations

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing Citrix file type associations
<b>Cause:</b>	Unable to write file type associations.
<b>Resolution:</b>	Perform <a href="#">preliminary investigational steps</a> and then contact InstallShield Technical Support.

## Error -9126: Failed to Sign Profile Using Certificate

The following table documents this message:

**Table 63** ▪ Error -9126: Failed to Sign Profile Using Certificate

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Failed to sign the profile using the supplied certificate
<b>Cause:</b>	The certificate that is being used is invalid.
<b>Resolution:</b>	Obtain a valid certificate and rebuild the profile.

## Error -9127: Could Not Create Script Execution

The following table documents this message:

**Table 64** ▪ Error -9127: Could Not Create Script Execution

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Could not create script execution for 'ScriptName'
<b>Cause:</b>	The specified script contains invalid data.
<b>Resolution:</b>	<p>On the Citrix Assistant <b>Build Settings</b> page, delete the script from the profile, re-add it, and then rebuild the profile.</p> <p>If you are still having problems, perform these additional <a href="#">investigational steps</a> and then contact InstallShield Technical Support.</p>

## Warning -9128: Duplicate Shortcut

The following table documents this message:

**Table 65** ▪ Warning -9128: Duplicate Shortcut

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	'ShortcutName' shortcut already exists in the profile. Excluding duplicate shortcut.

**Table 65** ▪ Warning -9128: Duplicate Shortcut

Category	Description
<b>Cause:</b>	There are multiple shortcuts defined in this profile that refer to different Start Menu locations or to other locations in the package.
<b>Resolution:</b>	These shortcuts are not needed. On the Citrix Assistant <b>Profile Shortcuts</b> page, unselect these shortcuts, and then rebuild the profile.

## Warning -9129: Duplicate Shortcut Names

The following table documents this message:

**Table 66** ▪ Warning -9129: Duplicate Shortcut Names

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	'ShortcutName' shortcut already exists in the profile, but with different command line parameters. A new unique shortcut 'NewShortcutName(1)' will be created in the profile.
<b>Cause:</b>	There are two shortcuts defined in this profile that have the same name, even though they have different command line parameters.
<b>Resolution:</b>	On the Citrix Assistant <b>Profile Shortcuts</b> page, rename one of these shortcuts and then rebuild the profile.

## Warning -9130: Duplicate Shortcut Targets

The following table documents this message:

**Table 67** ▪ Warning -9130: Duplicate Shortcut Targets

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	'ShortcutName' shortcut already exists in the profile, but with different target. A new unique shortcut 'NewShortcutName(1)' will be created in the profile.
<b>Cause:</b>	There are two shortcuts defined in this profile that have the same name, even though they have different targets.
<b>Resolution:</b>	On the Citrix Assistant <b>Profile Shortcuts</b> page, rename one of these shortcuts and then rebuild the profile.

## Warning -9131: Unable to Resolve Installer Variable

The following table documents this message:

**Table 68** ▪ Warning -9131: Unable to Resolve Installer Variable

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Unable to resolve an installer variable in the string 'StringName'
<b>Cause:</b>	Not all Windows Installer variables can be resolved at build time. This can result in errors if your application requires a specific value.
<b>Resolution:</b>	Repackage this application and rebuild the profile, or use a constant value in the Windows Installer package.

## Warning -9132: 16 Color Shortcut Icon Not Found

The following table documents this message:

**Table 69** ▪ Warning -9132: 16 Color Shortcut Icon Not Found

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	No 16 color icon found for 'ShortcutName' shortcut. Shortcut icon may look distorted when published.
<b>Cause:</b>	The icon used for this shortcut does not contain a 16-color image. Since Citrix currently does not support images with a higher number of colors, this icon may look distorted when shown and published in Citrix XenApp.
<b>Resolution:</b>	You can modify the shortcut to use a different icon or add a 16-color image to the one currently used.

## Warning -9133: Shortcut Icon Not Found

The following table documents this message:

**Table 70** ▪ Warning -9133: Shortcut Icon Not Found

Category	Description
<b>Type:</b>	Warning

**Table 70** ▪ Warning -9133: Shortcut Icon Not Found

Category	Description
<b>Message:</b>	No icon found for 'ShortcutName' shortcut. Using generic Windows application icon instead.
<b>Cause:</b>	If no icon can be loaded for this shortcut, the generic Windows application icon is used. This can happen if the file used is corrupt or if extracting an image from it is not possible.
<b>Resolution:</b>	Modify the shortcut to use a different icon.

## Warning -9134: Failure to Extract Icon from Executable

The following table documents this message:

**Table 71** ▪ Warning -9134: Failure to Extract Icon from Executable

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Failed to extract icon from executable 'filename'. Make sure the executable is not corrupt.
<b>Cause:</b>	A corrupt icon file may cause this warning.
<b>Resolution:</b>	Modify the shortcut to use a different icon.

## Error -9135: Shortcut Target is 16-Bit

The following table documents this message:

**Table 72** ▪ Error -9135: Shortcut Target is 16-Bit

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The target for shortcut 'ShortcutName' is 16-bit. This application may not function properly in the Citrix Isolation Environment.
<b>Cause:</b>	The file this shortcut points to is a 16-bit application.
<b>Resolution:</b>	Replace file with a newer 32-bit version. Can also test and see if the application works properly in the Citrix environment.

## Warning -9136: Some Files May Not Be Decompressed

The following table documents this message:

**Table 73** • Warning -9136: Some Files May Not Be Decompressed

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Some files may not be decompressed from this package because it contains features with a default install level of 0.
<b>Cause:</b>	When installing a compressed Windows Installer package, the build engine runs an administrative installation of it to decompress it. One limitation of an administrative installation is that it does not decompress a file if the feature it is contained in has a default install level of 0. If there are any files in any components contained within those features, InstallShield will generate an error when it attempts to copy those files into the Citrix profile, because they will not exist in the source location.
<b>Resolution:</b>	To resolve this issue, edit the Windows Installer package and set the default install level of that feature to something other than 0.

## Warning -9137: Destination Directory Cannot Be Found

The following table documents this message:

**Table 74** • Warning -9137: Destination Directory Cannot Be Found

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The destination directory for the 'FileName' file cannot be found. You should consider Repackaging this application before proceeding with the conversion process.
<b>Cause:</b>	This is an internal error.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Warning -9138: Ignoring a DuplicateFile Table Entry

The following table documents this message:

**Table 75** • Warning -9138: Ignoring a DuplicateFile Table Entry

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Ignoring a DuplicateFile table entry because unable to resolve the property used for the DestFolder: 'INVALIDPATH'
<b>Cause:</b>	You might encounter this error when the Windows Installer package that you are converting includes one or more entries in the DuplicateFile table, and a property that is used in the DestFolder column for one of those entries in the DuplicateFile table cannot be resolved. For example, if the destination for a duplicate file is set by a custom action, that destination cannot be resolved during the conversion.
<b>Resolution:</b>	<p>The <b>DuplicateFile</b> table contains a list of files that need to be duplicated during installation, either to a different directory than the original file or to the same directory but with a different name. Because a destination in this table cannot be resolved, you need to do one of the following to resolve this issue:</p> <ul style="list-style-type: none"><li>● <b>Option 1: Edit the Windows Installer Package</b>—Open the Windows Installer package in InstallShield and modify it to eliminate the use of the problematic entry in the <b>DuplicateFile</b> table by including any additional copies of that file.</li><li>● <b>Option 2: Repackage the Application</b>—Use the Repackaging Wizard to repackage this application, and then build the Repackager project to generate a revised Windows Installer package.</li><li>● <b>Option 3: Write a Pre-Launch Script</b>—Write a pre-launch script that—upon application launch—performs the file copy operations for the problematic entry in the <b>DuplicateFile</b> table.</li></ul>

## Warning -9150: Warning Building Windows Installer Package

The following table documents this message:

**Table 76** • Warning -9150: Warning Building Windows Installer Package

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	Warning building Windows Installer package: <i>Warning number and message.</i>
<b>Cause:</b>	This warning indicates that InstallShield encountered a build warning when it built the new Basic MSI project and releases for the App-V application that you are creating.

**Table 76** ▪ Warning -9150: Warning Building Windows Installer Package (cont.)

Category	Description
<b>Resolution:</b>	You may need to resolve the warning in the Basic MSI project that InstallShield created in the App-VPackage subfolder when you built the App-V application. However, note that InstallShield overwrites the Basic MSI project each time that you rebuild the App-V application.

## Error -9151: Error Building Windows Installer Package

The following table documents this message:

**Table 77** ▪ Error -9150: Error Building Windows Installer Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Error building Windows Installer package: <i>Error number and message.</i>
<b>Cause:</b>	This error indicates that InstallShield encountered a build error when it built the new Basic MSI project and releases for the App-V application that you are creating.
<b>Resolution:</b>	You may need to resolve the error in the Basic MSI project that InstallShield created in the App-VPackage subfolder when you built the App-V application. However, note that InstallShield overwrites the Basic MSI project each time that you rebuild the App-V application.

## Error -9200: ThinApp Must Be Installed

The following table documents this message:

**Table 78** ▪ Error -9200: ThinApp Must Be Installed

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	A licensed or demo version of ThinApp must be installed on this machine in order to successfully build ThinApp applications. ( <a href="http://www.vmware.com">www.vmware.com</a> )
<b>Cause:</b>	ThinApp is not installed.
<b>Resolution:</b>	Install ThinApp.

## Warning -9201: Extension for Shortcut Files Must Be “.exe”

The following table documents this message:

**Table 79** ▪ Warning -9201: Extension for Shortcut Files Must Be “.exe”

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The extension for the target for shortcut 'ShortcutName' is not '.exe'. Excluding shortcut.
<b>Cause:</b>	Shortcuts that do not have a filename extension of .exe are excluded.
<b>Resolution:</b>	No action is required.

## Error -9202: No Applications Were Created

The following table documents this message:

**Table 80** ▪ Error -9202: No Applications Were Created

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	No applications were created.
<b>Cause:</b>	Either the Windows Installer package had no shortcuts or all shortcuts were excluded.
<b>Resolution:</b>	Make sure that the source Windows Installer .msi package has at least one shortcut to an .exe file.

## Error -9203: ThinApp Tool is Missing

The following table documents this message:

**Table 81** ▪ Error -9203: ThinApp Tool is Missing

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	ThinApp: 'ToolName' was not found
<b>Cause:</b>	One of the ThinApp tools required to build a ThinApp application was not found.
<b>Resolution:</b>	Reinstall ThinApp.

## Error -9204: Duplicate Shortcut

The following table documents this message:

**Table 82** ▪ Error -9204: Duplicate Shortcut

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	'ShortcutName' shortcut already exists. Excluding duplicate shortcut.
<b>Cause:</b>	The source package has two shortcuts that both point to the same .exe target.
<b>Resolution:</b>	No action is required.

## Error -9205: Identically Named Shortcut Already Exists, But With Different Parameters

The following table documents this message:

**Table 83** ▪ Error -9205: Identically Named Shortcut Already Exists, But With Different Command Line Parameters

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	'ShortcutName' shortcut already exists, but with different command line parameters. A new, unique shortcut will be created.
<b>Cause:</b>	Two shortcuts in the package differed in arguments only.
<b>Resolution:</b>	No action is required.

## Error -9206: Identically Named Shortcut Already Exists, But With a Different Target

The following table documents this message:

**Table 84** ▪ Error -9206: Identically Named Shortcut Already Exists, But With a Different Target

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	'ShortcutName' shortcut already exists, but with a different target. A new, unique shortcut will be created.
<b>Cause:</b>	Two shortcuts differed in the target pointed to only.

**Table 84** ▪ Error -9206: Identically Named Shortcut Already Exists, But With a Different Target

Category	Description
<b>Resolution:</b>	No action is required.

## Error -9207: Error During Build Process (vregtool.exe)

The following table documents this message:

**Table 85** ▪ Error -9207: Error During Build Process (vregtool.exe)

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred during the ThinApp build process (vregtool.exe).
<b>Cause:</b>	An unexpected error occurred while running the vregtool.exe step of the ThinApp build process.
<b>Resolution:</b>	The cause of this error may be discernible by the progress messages that were displayed just before this error occurred.  Also, make sure none of the files/folders in the build folder hierarchy are locked.

## Error -9208: Error Occurred During Build Process (vftool.exe)

The following table documents this message:

**Table 86** ▪ Error -9208: Error Occurred During Build Process (vftool.exe)

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred during the ThinApp build process (vftool.exe)
<b>Cause:</b>	An unexpected error occurred while running the vftool.exe step of the ThinApp build process.
<b>Resolution:</b>	The cause of this error may be discernible by the progress messages that were displayed just before this error occurred.  Also, make sure none of the files/folders in the build folder hierarchy are locked.

## Error -9209: Error Occurred During Build Process (tlink.exe)

The following table documents this message:

**Table 87** ▪ Error -9209: Error Occurred During Build Process (tlink.exe)

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred during the ThinApp build process (tlink.exe)
<b>Cause:</b>	An unexpected error occurred while running the tlink.exe step of the ThinApp build process.
<b>Resolution:</b>	The cause of this error may be discernible by the progress messages that were displayed just before this error occurred.  Also, make sure none of the files/folders of the build folder hierarchy are locked.

## Error -9300: Unhandled Exception During AdviseFile Operation

The following table documents this message:

**Table 88** ▪ Error -9300: Unhandled Exception During AdviseFile Operation

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the AdviseFile operation for rule 'RuleName'
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9301: Unhandled Exception During AdviseRegistry Operation

The following table documents this message:

**Table 89** ▪ Error -9301: Unhandled Exception During AdviseRegistry Operation

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the AdviseRegistry operation for rule 'RuleName'
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9302: Unhandled Exception During Command Action

The following table documents this message:

**Table 90** ▪ Error -9302: Unhandled Exception During Command Action

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the command action with the description 'CommandActionName'
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9303: Unhandled Exception During Alter File Action

The following table documents this message:

**Table 91** ▪ Error -9303: Unhandled Exception During Alter File Action

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the alter file action with the description 'FileName'
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9304: Unhandled Exception During Alter Registry Action

The following table documents this message:

**Table 92** ▪ Error -9304: Unhandled Exception During Alter Registry Action

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the alter registry action with the description 'RegistryName'
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9305: Unhandled Exception During Create Action

The following table documents this message:

**Table 93** ▪ Error -9305: Unhandled Exception During Create Action

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the create action with the description 'CreateName'
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9306: Unhandled Exception During Execution of Rules Engine

The following table documents this message:

**Table 94** ▪ Error -9306: Unhandled Exception During Execution of Rules Engine

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An unhandled exception occurred during the execution of the rules engine.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9401: Error Initializing App-V Writer

The following table documents this message:

**Table 95** ▪ Error -9401: Error Initializing App-V Writer

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error initializing App-V writer.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9402: Error Initializing App-V Package

The following table documents this message:

**Table 96** ▪ Error -9402: Error Initializing App-V Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error initializing App-V package.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9403: Error Writing App-V File Entries

The following table documents this message:

**Table 97** ▪ Error -9403: Error Writing App-V File Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing App-V file entries.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9404: Error Writing App-V Folder Entries

The following table documents this message:

**Table 98** ▪ Error -9404: Error Writing App-V Folder Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing App-V folder entries
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9405: Error Writing App-V Registry Entries

The following table documents this message:

**Table 99** ▪ Error -9405: Error Writing App-V Registry Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing App-V registry entries.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9406: Error Writing App-V INI File Entries

The following table documents this message:

**Table 100** ▪ Error -9406: Error Writing App-V INI File Entries

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing App-V INI file entries.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9407: Error Writing App-V Shortcuts

The following table documents this message:

**Table 101** ▪ Error -9407: Error Writing App-V Shortcuts

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing App-V shortcuts.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9408: Error Writing App-V File Type Data

The following table documents this message:

**Table 102** ■ Error -9408: Error Writing App-V File Type Data

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error writing App-V file type data.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9409: Error Saving App-V Data

The following table documents this message:

**Table 103** ■ Error -9409: Error Saving App-V Data

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error saving App-V data.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9410: Error Determining Source File Path

The following table documents this message:

**Table 104** ■ Error -9410: Error Determining Source File Path

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Unexpected error determining source file path for 'FileName'.
<b>Cause:</b>	The installation location of a file, which is determined by some run time property, cannot be determined by the App-V virtual converter.
<b>Resolution:</b>	Locate the file in InstallShield and provide a known directory.

## Error -9411: OSD File Template Could Not Be Extracted

The following table documents this message:

**Table 105** ▪ Error -9411: OSD File Template Could Not Be Extracted

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The Microsoft App-V OSD file template could not be extracted. The OSD file generation will not operate properly.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9412: OSD File Could Not Be Saved

The following table documents this message:

**Table 106** ▪ Error -9412: OSD File Could Not Be Saved

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The Microsoft App-V OSD file could not be saved. The OSD file generation will not operate properly.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9413: App-V OSD Save

The following table documents this message:

**Table 107** ▪ Error -4313: App-V OSD Save

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The Microsoft App-V OSD file could not be saved. The OSD file generation will not operate properly.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Warning -9414: Local App-V Application Specified as a Dependency of the Primary Application

The following table documents this message:

**Table 108** ▪ Warning -9414: Local App-V Application Specified as a Dependency of the Primary Application

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	A local App-V application was specified as a dependency of the primary application. The primary application may not run correctly if it is relocated to a different location.
<b>Cause:</b>	The user specified a dependent App-V application that is either on the local drive or on a mapped drive. This is determined by examining the HREF attribute of the CODEBASE tag in the dependency application's OSD file.
<b>Resolution:</b>	Dependency applications should be referenced by a portable mechanism using either a non-FILE protocol or by using a network URL.

## Error -9415: Dependency Application Was Not Found

The following table documents this message:

**Table 109** ▪ Error -9415: Dependency Application Was Not Found

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Dependency application was not found: 'ApplicationName'.
<b>Cause:</b>	A specified App-V dependency application file was not found.
<b>Resolution:</b>	Check the path of the specified App-V dependency application.

## Warning -9416: Invalid Primary Application Directory

The following table documents this message:

**Table 110** ▪ Warning -9416: Invalid Primary Application Directory

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	The specified Primary Application Directory, 'DirectoryName', does not exist.

**Table 110** ▪ Warning -9416: Invalid Primary Application Directory

Category	Description
<b>Cause:</b>	This may be caused if the directories specified in the Windows Installer package have changed after a valid Primary Application Directory was specified.
<b>Resolution:</b>	Specify a valid Primary Application Directory using the supplied browse folder in InstallShield.

## Error -9417: Dependency Application's OSD File Contains an Invalid HREF Value

The following table documents this message:

**Table 111** ▪ Error -9417: Dependency Application's OSD File Contains an Invalid HREF Value

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Dependency application OSD file contains an invalid value for the HREF field of the CODEBASE tag: 'HREF_Field_Value'
<b>Cause:</b>	The CODEBASE tag of the dependency application's OSD file may have an empty or non-existent HREF attribute.
<b>Resolution:</b>	Make sure that the CODEBASE tag of the dependency application's OSD file has a valid HREF attribute.

## Error -9418: Error While Privatizing Side-By-Side Assemblies

The following table documents this message:

**Table 112** ▪ Error -9418: Error While Privatizing Side-By-Side Assemblies

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error occurred while privatizing Side-By-Side assemblies.
<b>Cause:</b>	When converting to an App-V package, files installed to the win32 Sxs assembly cache need to be privatized so that the App-V runtime can find them. This error occurs if there was an unexpected failure in that process.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9419: Error Inserting Watermark

The following table documents this message:

**Table 113** ▪ Error -9419: Error Inserting Watermark

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	An error has occurred inserting the evaluation watermark into the App-V Package.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Error -9424: Building an App-V 5.x Package

The following table documents this message:

**Table 114** ▪ Error -9424: Building an App-V 5.x Package

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Skipping conversion to Microsoft App-V 5. The minimum operating system requirement for building App-V 5 packages is Windows 8 or Windows Server 2012.
<b>Resolution:</b>	Although you can configure settings for an App-V 5.x package on any version of Windows that InstallShield supports, building an App-V 5.x package from within InstallShield requires Windows 8 or Windows Server 2012.

## Warning -9500: Shortcut Missing

The following table documents this message:

**Table 115** ▪ Warning -9500: Shortcut Missing

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The target for shortcut 'FileName' does not exist. Excluding shortcut.
<b>Cause:</b>	The target file of a shortcut in the project does not exist.
<b>Resolution:</b>	Repackage this application and then rebuild the virtual package.

## Error -10000: Process Cancelled By User

The following table documents this message:

**Table 116** ▪ Error -10000: Process Cancelled By User

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Process cancelled by user.
<b>Cause:</b>	User clicked <b>Cancel</b> to cancel the profile conversion process.

## Warning -10001: Suite File Missing

The following table documents this message:

**Table 117** ▪ Warning -10001: Suite File Missing

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The suite MSI file 'FileName' is missing and will be excluded from the conversion.
<b>Cause:</b>	An MSI file that is part of a suite conversion was not found.
<b>Resolution:</b>	Make sure the input file for the suite conversion process exists.

## Warning -10002: Suite File is Duplicate

The following table documents this message:

**Table 118** ▪ Warning -10002: Suite File is Duplicate

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The suite MSI file 'FileName' appears to be the same as the main MSI file and we will exclude this file from the conversion process.
<b>Cause:</b>	A suite conversion was attempted where the main Windows Installer file (.msi) and one of the additional Windows Installer files specified were the same.
<b>Resolution:</b>	Specify unique Windows Installer files as part of the suite conversion process.

## Warning -10003: Application File Missing

The following table documents this message:

**Table 119** ▪ Warning -10003: Application File Missing

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	Application file not found 'ApplicationName'
<b>Cause:</b>	A file referenced by the installation was not found by the App-V virtual converter. It is likely that the file reference is broken in the installation.
<b>Resolution:</b>	Use InstallShield to locate the file in the installation and either fix the link or delete it.

## Warning -10004: INI File Missing

The following table documents this message:

**Table 120** ▪ Warning: -10004: INI File Missing

Category	Description
<b>Type:</b>	Error
<b>Message:</b>	INI file not found 'INI_File_Name'.
<b>Resolution:</b>	Contact InstallShield Technical Support.

## Fix 11000: Excluding TCPIP Registry Entries

The following table documents this message:

**Table 121** ▪ Fix 11000: Excluding TCPIP Registry Entries

Category	Description
<b>Type:</b>	Fix
<b>Message:</b>	Excluding TCPIP registry entries from the Citrix profile.
<b>Action:</b>	All TCPIP registry entries will be excluded from the Citrix profile.

## Fatal Error 11001: Fail on VMware

The following table documents this message:

**Table 122** ▪ Fatal Error 11001: Fail on VMware

Category	Description
<b>Type:</b>	Fatal
<b>Message:</b>	VMware cannot be virtualized.
<b>Cause:</b>	Conversion will fail when the application being virtualized is VMware.
<b>Action:</b>	This error message is displayed: VMware cannot be virtualized.

## Warning 11003: Control Panel Applet - Citrix

The following table documents this message:

**Table 123** ▪ Warning 11003: Control Panel Applet - Citrix

Category	Description
<b>Type:</b>	Warning
<b>Message:</b>	The Control Panel Applet [AppletName] will not appear in Control Panel.
<b>Action:</b>	A warning is displayed when the application contains a Control Panel applet.

## Fix 11004: Control Panel Applet - ThinApp

The following table documents this message:

**Table 124** ▪ Fix 11004: Control Panel Applet - ThinApp

Category	Description
<b>Type:</b>	Fix
<b>Message:</b>	Generating shortcut for the Control Panel Applet located at 'DirectoryPath'
<b>Action:</b>	A default shortcut is created for ThinApp Control Panel applets.

## Fatal Error 11005: QuickTime 7.4.1 Causes Fatal Error

The following table documents this message:

**Table 125** ▪ Error 11005: QuickTime 7.4.1 Causes Fatal Error

Category	Description
<b>Type:</b>	Fatal Error
<b>Message:</b>	QuickTime 7.4.1 is known to have errors when running from a virtual package. Use QuickTime 7.4.5 instead.
<b>Cause:</b>	QuickTime 7.4.1 cannot be virtualized correctly.
<b>Resolution:</b>	Obtain QuickTime 7.4.5 and repeat the conversion process.

## Fix 11006: Adobe Distiller Exclude AdobePDFSettings

The following table documents this message:

**Table 126** ▪ Fix 11006: Adobe Distiller Exclude AdobePDFSettings

Category	Description
<b>Type:</b>	Fix
<b>Message:</b>	Excluding the registry key Software\Adobe\Acrobat Distiller\AdobePDFSettings. Adobe Distiller will recreate these settings on first use.
<b>Action:</b>	The AdobePDFSettings registry settings are excluded.

## Fix 11007: Exclude URL Shortcut

The following table documents this message:

**Table 127** ▪ Fix 11007: Adobe Distiller Exclude AdobePDFSettings

Category	Description
<b>Type:</b>	Fix
<b>Message:</b>	Excluding shortcut to .URL file. App-V does not launch these files properly.
<b>Action:</b>	The shortcut to the .URL file is excluded.

## Steps to Take Before Calling Technical Support

Before contacting InstallShield Technical Support, perform the following steps to attempt to clearly identify the problem you are having:

- **Check package**—To determine if this error is caused by a problem with the specific package you are converting, try to build a Citrix profile of a simple package that contains only one file.
- **Check machine and OS**—To determine if this error is caused by a configuration on a particular machine or operating system, attempt to build this Citrix profile on another machine or operating system.
- **Check individual files**—To determine if this is error limited to a specific item, find out if removing or excluding a particular item will build error free.

## Application Features Requiring Pre- or Post-Conversion Actions

Some application features are ignored when creating a Citrix profile. Therefore, some additional pre- or post-conversion actions must be taken in order for the virtual application to work.

The following table lists the application features which require additional, manual conversion steps:

**Table 128** ▪ Application Features Ignored During Profile Conversion

Windows Installer Feature	Manual Conversion Steps
<b>User-Defined Custom Actions</b>	<p>When converting a Windows Installer package to a Citrix profile, all custom actions are ignored. For user-defined custom actions, a warning message is generated. Any modifications to a target machine that a custom action in this Windows Installer package may create will not be propagated into the Citrix profile.</p> <p>The resolution that you should perform depends upon the purpose of the custom action:</p> <ul style="list-style-type: none"><li>● If the custom action merely automatically enters a value or makes some other kind of minor modification, you can ignore this warning.</li><li>● If the custom action does something which could change the behavior of the installation (such as setting a Property), you may need to resolve this issue.</li></ul> <p>To resolve this issue, first attempt to launch the converted package on Citrix XenApp. If you receive any application errors, you need to repackage this application, by performing the following steps.</p>  <hr/> <p><b>To successfully convert a package with user-defined custom actions:</b></p> <ol style="list-style-type: none"><li>1. Use the Repackaging Wizard to repackage this application. The Repackaging Wizard monitors system changes as an application is installed, and then that data is converted into a Repackager project.</li><li>2. Build the Repackager project to generate a revised Windows Installer package. This new Windows Installer package does not contain any custom actions, but (as a result of being repackaged) it will include the functionality performed by the original custom action.</li></ol>
<b>Services</b>	<p>Citrix XenApp does not support any type of services. Therefore, to resolve this issue, you need to install any required services outside of the isolation environment on the user desktop machines.</p>  <hr/> <p><b>To successfully convert a package with services:</b></p> <ol style="list-style-type: none"><li>1. If you have an application and a service bundled in the same Windows Installer package, you need to create a separate Windows Installer package containing just the service.</li><li>2. Install the service on each of the user desktop machines. The Citrix profile of this application should now be able to run in an isolation environment on machines that already have the service installed.</li></ol>

**Table 128** ▪ Application Features Ignored During Profile Conversion

Windows Installer Feature	Manual Conversion Steps
<b>COM+</b>	While Citrix XenApp supports communicating with COM+ applications, it does not support <i>installing</i> COM+ services. Therefore, an application that contains COM+ services cannot be deployed on Citrix XenApp.

# Automation Interface

The InstallShield Help Library explains how to use the InstallShield interface to author all elements of your installation and then build a release. For advanced developers, InstallShield exposes a COM interface that allows you to perform many of the same tasks from a program, such as a Visual Basic executable, or a script, such as a VBScript file in Windows Scripting Host. By calling methods, setting properties, accessing collections, and so on, through the automation interface, you can open a project and modify its features and component data in many of the same ways that you would in the InstallShield interface.

The highest-level object in the automation interface is the `ISWiProject` object. The first thing you must do to access the interface is create this object. Then, you can use its objects, methods, and properties to modify your project.

---

**Note** ▪ The automation interface affects a project only at design time and not run time.

For information on automation interface support in Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, and Merge Module projects, see the following sections:

- [Automation Objects](#)
- [Automation Collections](#)

For information on automation interface support in Advanced UI and Suite/Advanced UI projects, see the following sections:

- [Automation Objects for Advanced UI and Suite/Advanced UI Projects](#)
- [Automation Collections for Advanced UI and Suite/Advanced UI Projects](#)

## Automation Objects

---

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Each InstallShield automation object represents an installation element such as a feature, a component, or a file. This section describes each of the InstallShield automation objects.

The highest-level object in the automation interface is the `ISWiProject` object. The first thing you must do to access the interface is create this object. Then, you can use its objects, methods, and properties to modify your project.

---

**Note** ▪ The examples provided in the Automation Objects subsections use Visual Basic sample code, not VBScript.

## ISWiProject Object

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Project-specific differences are noted where appropriate.

**Note** - The examples provided in the Automation Objects subsections use Visual Basic sample code, not VBScript.

ISWiProject contains the interface for opening, closing, and saving an InstallShield project file (.ism or .dim). When InstallShield is installed on your system, you can instantiate a copy of ISWiProject with the following VB and VBScript syntax:

```
Set m_ISWiProject = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
```

To open an installation project, call the OpenProject method, as follows:

```
' Build path to the .ism file
strFile = "C:\InstallShield 2021 Projects\Test.ism"
m_ISWiProject.OpenProject strFile
```

**Important** - If you are using the automation interface on a 64-bit machine, you may need to load the automation interface through a 32-bit executable file. Otherwise, you may encounter an error when you instantiate a copy of ISWiProject, or any other object. For more information, see [Using the Automation Interface on a 64-Bit System](#).

### Build Status Events

The ISWiProject object raises the following status events:

- Public Event ProgressIncrement(ByVal lIncrement As Long, pbCancel As Boolean)
- Public Event ProgressMax(ByVal lMax As Long, pbCancel As Boolean)
- Public Event StatusMessage(ByVal sMessage As String, pbCancel As Boolean)

These events are raised during the build process and provide status updates. You can set pbCancel to stop the build. For sample code that demonstrates how to use these events, see [Using Build Status Events](#).

Many feature properties and attributes are available in the automation interface through this object's methods, properties, and collections. The following table lists the ISWiProject Object members. Remember that some methods, properties, and collections are only available for a particular project type.

## Members

**Table 1** • ISWiProject Object Members

Name	Project	Type	Description
<b>ActiveLanguage</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object	Read-Write Property	Gets or sets the default language of the project. Specify a single language as a language ID.  The automation interface uses the default language whenever you get or set a localizable property, such as ISWiShortcut's DisplayName. In InstallShield, localizable properties must use a string entry. If the property has a string identifier, the string that you enter for the property becomes the string entry's value for the default language.
<b>AddAdvancedFile</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Method	Creates an advanced file with the specified name and (optionally) in the specified disk image in the current project.
<b>AddAutomaticUpgradeEntry</b>	Basic MSI, InstallScript MSI	Method	Creates a new ISWiAutomaticUpgradeEntry item and returns a handle to that object.
<b>AddComponent</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Creates an <b>ISWiComponent</b> object in the current project.
<b>AddCustomAction</b>	Basic MSI, InstallScript MSI	Method	Creates an <b>ISWiCustomAction</b> object in the current project.
<b>AddFeature</b>	Basic MSI, InstallScript, InstallScript MSI	Method	Creates an <b>ISWiFeature</b> object in the current project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>AddLanguage</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Adds a language to the current project.
<b>AddPatchConfig</b>	Basic MSI, InstallScript MSI	Method	Creates an <b>ISWiPatchConfig</b> object in the current project.
<b>AddPathVariable</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Adds a path variable to the current project.
<b>AddProductConfig</b>	Basic MSI, InstallScript MSI	Method	Creates an <b>ISWiProductConfig</b> object in the current project.
<b>AddProperty</b>	Basic MSI, InstallScript MSI	Method	Creates a new ISWiProperty item and returns a handle to that object.
<b>AddSetupFile</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Method	Creates a support file with the specified name in the current project.
<b>AddSetupType</b>	InstallScript, InstallScript Object	Method	Creates a setup type with the specified name in the current project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>AddSqlServerConnection</b>	Basic MSI, DIM, InstallScript, InstallScript MSI	Method	Adds a new server connection to the current project.
<b>AddUpgradeTableEntry</b>	Basic MSI, InstallScript MSI	Method	Creates a new ISWiUpgradeTableEntry item and returns a handle to that object.
<b>AdminExecuteSequence</b>	Basic MSI, InstallScript MSI	Read-only Property	Returns an <a href="#">ISWiSequence</a> collection representing the Administration Execute sequence in the current project.
<b>AdminUISequence</b>	Basic MSI, InstallScript MSI	Read-only Property	Returns an <a href="#">ISWiSequence</a> collection representing the Administration User Interface sequence in the current project.
<b>AdvExecuteSequence</b>	Basic MSI, InstallScript MSI	Read-only Property	Returns an <a href="#">ISWiSequence</a> collection representing the Advertisement Execute sequence in the current project.
<b>AdvUISequence</b>	Basic MSI, InstallScript MSI	Read-only Property	Returns an <a href="#">ISWiSequence</a> collection representing the Advertisement User Interface sequence in the current project. (Note that validation rule ICE78 requires the Advertisement User Interface sequence to be empty. For more information, see <a href="#">ICEs</a> .)
<b>BuildPatchConfiguration</b>	Basic MSI, InstallScript MSI	Method	Calling this method builds the patch configuration identified by the strPatchConfiguration variable. This action has the same effect as right-clicking on a patch configuration in the Patch Design view and then selecting 'Build Patch'.
<b>BuildPCPFile</b>	Basic MSI, InstallScript MSI	Method	Builds a patch package based on a .pcp file.

Table 1 • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>CloseProject</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Closes an InstallShield installation project.
<b>CompanyName</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Specifies the company name.</p>  <p><b>Project</b> • In Basic MSI and InstallScript MSI projects, this property corresponds with the Publisher setting in the General Information view.</p> <p>In InstallScript projects, this property corresponds with the Company Name setting in the General Information view.</p>
<b>CompanyPhone</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Specifies the phone number that you would like end users to call for technical support. This phone number is displayed on the Support Information dialog of Add or Remove Programs.</p> <p>This property corresponds with the Support Phone Number setting in the General Information view.</p>
<b>CompanyURL</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Specifies the URL that you would like end users to visit for technical support. This URL is used as a hyperlink on the Support Information dialog of Add or Remove Programs.</p> <p>This property corresponds with the Publisher/Product URL setting in the General Information view.</p>
<b>CreatePatch</b>	Basic MSI, InstallScript MSI	Method	 <p><b>Caution</b> • The CreatePatch method is deprecated for new development. It has been replaced with the <a href="#">BuildPCPFile</a> and <a href="#">BuildPatchConfiguration</a> methods.</p>

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>CreateProject</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Creates a new project file (.ism or .dim).
<b>DeleteAdvancedFile</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Method	Deletes the specified advanced file from the current project.
<b>DeleteComponent</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Deletes the specified component from the project.
<b>DeleteCustomAction</b>	Basic MSI, InstallScript MSI	Method	Deletes an <b>ISWiCustomAction</b> object in the current project.
<b>DeleteMergeModule</b>	Basic MSI, InstallScript MSI	Method	Deletes a merge module from the current project.
<b>DeletePatchConfig</b>	Basic MSI, InstallScript MSI	Method	Deletes an <b>ISWiPatchConfig</b> object from the current project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>DeletePathVariable</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Deletes a path variable from the current project.
<b>DeleteProductConfig</b>	Basic MSI, InstallScript MSI	Method	Deletes an <b>ISWiProductConfig</b> object from the current project.
<b>DeleteProperty</b>	Basic MSI, InstallScript MSI	Method	Deletes a property from the Property table.
<b>DeleteSetupFile</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Method	Deletes the specified support file from the current project.
<b>DeleteSetupType</b>	InstallScript, InstallScript Object	Method	Deletes the specified setup type from the current project.
<b>DeleteSQLConnection</b>	Basic MSI, DIM, InstallScript, InstallScript MSI	Method	Remove a SQL Server connection from the current project.
<b>DeselectLanguage</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Deselects a language from the current project.

**Table 1** - ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>DotNetFrameworkPath</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specifies the path to the Microsoft .NET Framework. This parameter is optional.
<b>EnableSwidtag</b>	Basic MSI	Read-Write Property	<p>Enables or disables the creation of a software identification tag for an installation. Following is sample code that disables tag creation:</p> <pre>pProject.EnableSwidtag = False</pre> <p>For more information about software tagging, see <a href="#">Including a Software Identification Tag for Your Product</a>.</p>
<b>ExportProject</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Causes the project file to use the XML representation, which is better suited for <a href="#">source code integration</a> .
<b>ExportStrings</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Exports string entries to a text file.
<b>ForceUpgrade</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Upgrades the project from an earlier version of InstallShield to the current version.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>GenerateGUID</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Generates a new, unique GUID that is returned as a string.
<b>ImportProject</b>	Basic MSI	Method	<p>Converts an .isv file (a text file kept in a <a href="#">source code integration</a> program) to an InstallShield .ism project file.</p>  <p><b>Note</b> • The .isv file format has been deprecated to version 2.x of InstallShield for Windows Installer and versions of InstallShield Developer prior to 8.x.</p>
<b>ImportStrings</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Imports string entries from a text file.
<b>INSTALLDIR</b>	Basic MSI, InstallScript MSI	Read-Write Property	Sets the INSTALLDIR property for the project. A typical value is “[ProgramFilesFolder]CompanyName\ProductName”.
<b>InstallExecuteSequence</b>	Basic MSI, InstallScript MSI	Read-only Property	Returns an <a href="#">ISWiSequence</a> collection representing the Installation Execute sequence in the current project.
<b>InstallUISequence</b>	Basic MSI, InstallScript MSI	Read-only Property	Returns an <a href="#">ISWiSequence</a> collection representing the Installation User Interface sequence in the current project.
<b>ISWiAdvancedFiles</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Collection	Contains every advanced file (as an ISWiAdvancedFile object) in your project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>ISWiAutomaticUpgradeEntries</b>	Basic MSI, InstallScript MSI	Collection	Returns a collection of ISWiAutomaticUpgradeEntry items. This collection presents a list of Automatic Upgrade Items as they are defined in the IDE.
<b>ISWiComponents</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the components in this project.
<b>ISWiCustomActions</b>	Basic MSI, InstallScript MSI	Collection	Contains all of the custom actions in this project.
<b>ISWiFeatures</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all features' names and their components.
<b>ISWiLanguages</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the languages included in the current project.
<b>ISWiPatchConfigs</b>	Basic MSI, InstallScript MSI	Collection	Contains all of the patch configurations in this project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>ISWiPathVariables</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the path variables that are associated with the current project.
<b>ISWiProductConfigs</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the product configurations in this project.
<b>ISWiProperties</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Collection	Contains all of the Windows Installer properties in this project.
<b>ISWiSetupFiles</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Collection	Contains every support file (as an ISWiSetupFile object) in your project.
<b>ISWiSetupTypes</b>	InstallScript, InstallScript Object	Collection	Contains every setup type (as an ISWiSetupType object) in your project.
<b>ISWiSISProperties</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Collection	Contains all of the Summary Information Stream properties in this project.
<b>ISWiSQLConnections</b>	Basic MSI, DIM, InstallScript, InstallScript MSI	Collection	Contains all of the SQL Server connections in the current project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>ISWiUpgradeTableEntries</b>	Basic MSI, InstallScript MSI	Collection	Returns a collection of ISWiUpgradeTableEntry items. This collection presents a list of static major upgrade items, as defined in the IDE.
<b>MergeModuleSearchPath</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies one or more comma-delimited folders that contain the merge module (.msm) files referenced by your project.</p>  <p><b>Note</b> • If you plan to use the <i>ISWiRelease.Build</i> method, you should set this property.</p>
<b>MinimumTargetDotNetVersion</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specifies the minimum version of the .NET Framework that the installation requires on the target system. This parameter is optional. The default is the latest version of the .NET Framework the InstallShield interface supports.
<b>MinimumTargetMSIVersion</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Specifies the minimum version of Windows Installer that the installation requires on the target system. This parameter is optional. The default is the latest version of Windows Installer that the InstallShield interface supports.
<b>ModuleID and ModuleIDGUID</b>	Merge Module	Read-Write String Properties	<p>These properties are used only with merge module projects. Every merge module has a record in the ModuleSignature table. The ModuleID field of the ModuleSignature table is composed of two sections: ModuleID.ModuleIDGUID.</p> <p>For example, for a ModuleID value of IDID.019880FB_04F2_4D4B_99C9_9A0A12185229, the ModuleID and ModuleIDGUID properties of the ISWiProject object enable the following:</p> <ul style="list-style-type: none"> <li>• The ModuleID property gets or sets <i>IDID</i>.</li> <li>• The ModuleIDGUID property gets or sets <i>019880FB_04F2_4D4B_99C9_9A0A12185229</i>.</li> </ul>

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>OnUpgrade</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets the value for the Small/Minor/Upgrade Settings options on the Common tab in the Upgrades view. This property lets you specify whether you want end users to be prompted before proceeding with the upgrade. A Setup.exe setup launcher is required for this functionality. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>euoPrompt (1)</b>— Prompt.</li> <li>● <b>euoUpgrade (2)</b>—Do not prompt the end user; just install the upgrade.</li> <li>● <b>euoNoOp (0)</b>—Disable any prompts. Your installation should detect the upgrade scenario and run the installation in upgrade mode.</li> </ul>
<b>OpenProject</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	<p>Opens an InstallShield installation project file (.ism or .dim).</p> <p>This method fails if the project is open in the InstallShield user interface.</p>
<b>PackageCode</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets the <b>package code</b> as a string GUID. The GUID must be surrounded by braces—{12345678-1234-1234-1234-1234567890AB}, for example.
<b>ProductCode</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Read-Write Property	<p>Gets or sets the <b>product code</b> as a string GUID. The GUID must be surrounded by braces—{12345678-1234-1234-1234-1234567890AB}, for example.</p> <p>This property is not available for merge module projects.</p>
<b>ProductName</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	Gets or sets the <b>product name</b> .

**Table 1** - ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>ProductVersion</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	Contains the <b>version number</b> of the project as a string.
<b>RemoveFeature</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Method	Deletes a feature from the project.
<b>SaveProject</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Saves an InstallShield installation project.
<b>SelfRegistrationMethod</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Specifies the self-registration method that should be used for files that are designated as self-registering. Valid options are: <ul style="list-style-type: none"> <li>● <b>esrISSelfReg (0)</b>—Use the InstallShield self-registration table (ISSelfReg) for all self-registering files.</li> <li>● <b>esrSelfReg (1)</b>—Use the Windows Installer self-registration table (SelfReg) for all self-registering files.</li> </ul>
<b>SkipUpgradeValidators</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Enables you to skip the upgrade validators that normally run at the end of the build.

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>SwidtagProperty</b>	Basic MSI	Read-Write Property	<p>Gets or sets value for the software identification tag settings in the General Information view. This property takes one of the following options for the first parameter:</p> <ul style="list-style-type: none"> <li>● <b>eswtpUniqueId (0)</b>—This parameter specifies the value for the Unique ID setting in the General Information view.</li> <li>● <b>eswtpTagCreatorName (2)</b>—This parameter specifies the value for the Tag Creator setting in the General Information view.</li> <li>● <b>eswtpTagCreatorRegid (3)</b>—This parameter specifies the value for the Tag Creator ID setting in the General Information view.</li> <li>● <b>eswtpSfwCreatorName (4)</b>—This parameter specifies the value for the Software Creator setting in the General Information view.</li> <li>● <b>eswtpSfwCreatorRegid (5)</b>—This parameter specifies the value for the Software Creator ID setting in the General Information view.</li> <li>● <b>eswtpSfwLicensorName (6)</b>—This parameter specifies the value for the Software Licensor setting in the General Information view.</li> <li>● <b>eswtpSfwLicensorRegid (7)</b>—This parameter specifies the value for the Software Licensor ID setting in the General Information view.</li> <li>● <b>eswtpEntitlementRequired (8)</b>—This parameter specifies whether your product requires users to have a corresponding software entitlement in order for software reconciliation to be considered successful.</li> </ul> <p>Following is sample code that uses this property:</p> <pre>pProject.SwidtagProperty(eswtpTagCreatorRegid) = "regid.1986-12.com.mycompany"</pre>
<b>UpgradeCode</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets the Upgrade Code property as a string GUID. The GUID must be surrounded by braces—{12345678-1234-1234-1234-1234567890AB}, for example.</p> <p>This property is not available for merge module projects.</p>

**Table 1** • ISWiProject Object Members (cont.)

Name	Project	Type	Description
<b>UseXMLProjectFormat</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Boolean Property	Specifies whether the project file should use the XML file format.

## AddAdvancedFile Method

**Project** • The AddAdvancedFile method applies to the following project types.

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object

The AddAdvancedFile method creates an **advanced file** object with the specified name and (optionally) in the specified disk image in the current project.

## Syntax

AddAdvancedFile (FileName As String, Optional DiskType As ISWiDiskType = edtDisk1) As ISWiAdvancedFile

## Parameters

**Table 2** • AddAdvancedFile Method Parameters

Parameter	Description
<b>FileName</b>	Pass the fully qualified filename for the advanced file that you want to add.
<b>DiskType</b>	<p>This optional parameter specifies the Advanced Files folder in which you want to add the advanced file. Specify one of the following values.</p> <ul style="list-style-type: none"> <li>● <b>edtDisk1</b> (1)—Add the advanced file to the Disk 1 folder. This is the default value for this optional parameter.</li> <li>● <b>edtLastDisk</b> (-1)—Add the advanced file to the Last Disk folder.</li> <li>● <b>edtOther</b> (0)—Add the advanced file to the Other folder.</li> </ul>

## Example

The following Visual Basic lines demonstrate this method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pAdvancedFile As ISWiAdvancedFile

Set pAdvancedFile = pProj.AddAdvancedFile ("C:\My Files\MyLastDiskFile.ext", edtLastDisk)

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- ISWiProject

## AddAutomaticUpgradeEntry Method

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the AddAutomaticUpgradeEntry method to create a new IswiAutomaticUpgradeEntry item and return a handle to that object.

## Syntax

AddAutomaticUpgradeEntry()

## Example

The following Visual Basic lines demonstrate this method:

```
'#####
'# THIS SAMPLE WILL NOT EXECUTE PROPERLY WITHOUT A VALID PROJECT PATH
'#####
set pProject = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProject.OpenProject("C:\Documents and Settings\Testlab\My Documents\MySetups\your project name-
21.ism")

'#####
'To create a new entry

dim pAutoEntry
set pAutoEntry = pProject.AddAutomaticUpgradeEntry()

pAutoEntry.Name ="AutoEntry"
pAutoEntry.ReleaseFlags = "AutoFlag"
pAutoEntry.UpgradeSetupPath = "AutoPath"

'#####
'To find and delete an existing entry

set pAutoEntry = nothing
set pAutoEntry = pProject.IswiAutoUpgradeEntries("AutoEntry")
pAutoEntry.Delete

pProject.SaveProject
pProject.CloseProject
```

## Applies To

- ISWiProject

## AddComponent Method

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

The AddComponent method creates a **component** object with the specified name in the current project.

When the component is added, a GUID is automatically generated for it (see the GUID property for **ISWiComponent**). After you have added the component, you can set its other properties and **associate it with a feature**.

## Syntax

```
AddComponent (ComponentKey As String) As ISWiComponent
```

## Parameters

**Table 3** • AddComponent Method Parameters

Parameter	Description
<b>ComponentKey</b>	<p>The component key is the same as the name of the component that is displayed in the Setup Design views. This string must contain only alphanumeric characters, dots (.), or underscores (_), and it must begin with a letter or an underscore. ComponentKey must be unique among your project's component names.</p> <p>Component names are case-sensitive.</p>

## Example

The following Visual Basic lines demonstrate this method:

```
Dim pComponent As ISWiComponent
Set pComponent = m_pProject.AddComponent ("New_Component")
```

## Applies To

- **ISWiProject**

## AddCustomAction Method

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

Call the AddCustomAction method to add a custom action to the current project. To insert a custom action into a sequence, use the **InsertCustomAction** method.

## Syntax

AddCustomAction (CustomActionKey As String) as ISWiCustomAction

## Parameters

**Table 4** • AddCustomAction Method Parameters

Parameter	Description
<b>CustomActionKey</b>	The string name of the custom action you want to create.

## Applies To

- [ISWiProject](#)

## AddFeature Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript*
- *InstallScript MSI*

The AddFeature method creates a feature with the specified name. AddFeature is a member of [ISWiProject](#). The new feature is added to the current project as a top-level feature, but when this method is a member of an [ISWiFeature](#) object, the new feature is added as a subfeature of the current feature.

The feature is created with the same default properties that new features have when you add them in InstallShield.

After you have added the feature, you can set its other properties and associate components with it.

## Syntax

AddFeature (FeatureKey As String) As ISWiFeature

## Parameters

**Table 5 • AddFeature Method Parameters**

Parameter	Description
<b>FeatureKey</b>	<p>The feature key is the same as the name of the feature that is displayed in the Setup Design and Features views. The name becomes the index for the new ISWiFeature object. This string must contain only alphanumeric characters, dots (.), or underscores (_), and it must begin with a letter or an underscore. FeatureKey must be unique among your project's feature names.</p> <p>Feature names are case-sensitive.</p>

## Example

The following Visual Basic lines demonstrate calling AddFeature to add a feature, a subfeature, and then associate an existing component with the subfeature:

```
Dim pProject As ISWiProject

Set pProject = New ISWiProject
pProject.OpenProject "C:\MySetups\SampleApp.ism"

Dim pFeat1, pFeat2 As ISWiFeature
Dim sFeat1Name, sFeat2Name As String

sFeat1Name = "ParentFeature"
sFeat2Name = "SubFeature"

' Add the feature ParentFeature, then SubFeature under ParentFeature
Set pFeat1 = pProject.AddFeature(sFeat1Name)
Set pFeat2 = pFeat1.AddFeature(sFeat2Name)

Dim pComp
Dim sCompName As String

' Add the existing component NewComponent1 to SubFeature
sCompName = "NewComponent1"
Set pComp = pProject.ISWiComponents.Item(sCompName)
pFeat2.AttachComponent pComp

pProject.SaveProject
pProject.CloseProject
```

## Applies To

- ISWiProject
- ISWiFeature

## AddLanguage Method

**Edition** ▪ Support for multilanguage installations is available with InstallShield Premier Edition.

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the AddLanguage method to add a language to the current project. Using this method is similar to adding a language in the General Information view in InstallShield. You can set the properties of the new language with the [ISWiLanguage](#) object.

### Syntax

AddLanguage (LangId As String)

### Parameters

**Table 6** ▪ AddLanguage Method Parameters

Parameter	Description
<b>LangId</b>	Pass the language ID (as a string) that you want to add to the current project. For example:  <code>oProject.AddLanguage "1035"</code>

### Applies To

- [ISWiProject](#)

## AddPatchConfig Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the AddPatchConfig method to add a patch configuration to your project. Using this method is similar to adding a patch configuration with the Patch Design view of the IDE. You can set the properties of the new patch configuration with the `ISWiPatchConfig` object.

## Syntax

AddPatchConfig (PatchConfigKey As String) As ISWiPatchConfig

## Parameters

**Table 7** • AddPatchCofig Method Parameters

Parameter	Description
PatchConfigKey	Holds the name of your new patch configuration.

## Applies To

- ISWiProject

## AddPathVariable Method

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the AddPathVariable method to add a path variable to your project. Using this method is similar to adding a path variable in the Path Variables view in InstallShield. You can set the properties of the new path variable with the [ISWiPathVariable](#) object.

**Important** • Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

## Syntax

```
AddPathVariable (sName As String) As ISWiPathVariable
```

## Parameters

**Table 8** • AddPathVariable Method Parameters

Parameter	Description
sName	Specifies the name of the path variable.

## Applies To

- ISWiProject

## AddProductConfig Method

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript MSI
- Merge Module

Call the AddProductConfig method to add a product configuration to your project. Using this method is similar to adding a product configuration with the Release Wizard or the Releases view of the IDE. You can set the properties of the new product configuration with the [ISWiProductConfig](#) object.

## Syntax

```
AddProductConfig (ProductConfigKey As String) As ISWiProductConfig
```

## Parameters

**Table 9** • AddProductConfig Method Parameters

Parameter	Description
ProductConfigKey	Holds the name of your new product configuration.

## Applies To

- ISWiProject

## AddProperty Method

**Project** • The AddProperty method applies to the following project types.

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

The AddProperty method creates a Windows Installer property with the specified name in the current project.

## Syntax

AddProperty (Name As String) As ISWiProperty

## Parameters

**Table 10** ▪ AddProperty Method Parameters

Parameter	Description
<b>Name</b>	Pass the name for the Windows Installer property that you want to add.

## Example

The following Visual Basic lines demonstrate the AddProperty method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IsWiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"

Dim pProperty As ISWiProperty
Set pProperty = pProj.AddProperty ("MYPROP")
pProperty.Value = "MyPropValue"

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- *ISWiProject*

## AddSetupFile Method

**Project** ▪ The AddSetupFile method applies to the following project types.

- *Basic MSI*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*

The AddSetupFile method creates a support file with the specified name in the current project.

## Syntax

AddSetupFile (FileName As String) As ISWiSetupFile

## Parameters

**Table 11** • AddSetupFile Method Parameters

Parameter	Description
<b>FileName</b>	Pass the fully qualified file name for the support file that you want to add.

## Example

The following Visual Basic lines demonstrate the AddSetupFile method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pSetupFile As ISWiSetupFile

Set pSetupFile = pProj.AddSetupFile ("C:\My Files\MySupportFile.ext")

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- **ISWiProject**

## AddSetupType Method

**Project** • This information applies to the following project types:

- *InstallScript*
- *InstallScript Object*

The AddSetupType method creates a setup type with the specified name in the current project.

## Syntax

AddSetupType (Name As String) As ISWiSetupType

## Parameters

**Table 12** - AddSetupType Method Parameters

Parameter	Description
<b>Name</b>	<p>Pass the name for the setup type that you want to add. The name should be the text that you want to use as the display name.</p> <p>The automation interface automatically generates a valid primary key for the new setup type based on the name that you specify for this parameter.</p>

## Example

The following Visual Basic lines demonstrate the AddSetupType method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pSetupType As ISWiSetupType

Set pSetupType = pProj.AddSetupType ("Client Setup - Save Space")

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- [ISWiProject](#)

## AddSQLServerConnection Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

Call the AddSQLServerConnection method to add a new server connection to your project.

## Syntax

```
Function AddSQLServerConnection(strConnectionName As String) As ISWiSQLConnection
```

## Parameters

**Table 13** • AddSQLServerConnection Method Parameters

Parameter	Description
ConnectionName	Specify the name of the new connection you want to establish.

## Return Values

This method returns ISWiSQLConnection object.

## Applies To

- ISWiProject

## AddUpgradeTableEntry Method

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the AddUpgradeTableEntry method to create a new ISWiUpgradeTableEntry item and return a handle to that object.

## Syntax

```
AddUpgradeTableEntry()
```

## Example

The following Visual Basic lines demonstrate this method:

```
'#####
'# THIS SAMPLE WILL NOT EXECUTE PROPERLY WITHOUT A VALID PROJECT PATH
'#####
set pProject = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProject.OpenProject("C:\Documents and Settings\Testlab\My Documents\MySetups\your project name-
21.ism")

'#####
'To create a new entry

dim pTableEntry
set pTableEntry = pProject.AddUpgradeTableEntry()
```

```

pTableEntry.UpgradeCode="{12345678-1234-1234-1234-123456789012}"
pTableEntry.VersionMin = "1.0"
pTableEntry.VersionMax = "2.0"
pTableEntry.Language = "0"
pTableEntry.Remove = ""
pTableEntry.ActionProperty = "ACTIONPROP_AUTOMATION"
pTableEntry.Attributes = 5

'#####
'To find and delete an existing entry

set pTableEntry =pProject.IsWiUpgradeTableEntries("{12345678-1234-1234-1234-123456789012}")
pTableEntry.Delete

pProject.SaveProject
pProject.CloseProject

```

## Applies To

- ISWiProject

## BuildPatchConfiguration Method

**Project** - This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call BuildPatchConfiguration to build the patch configuration identified by the strPatchConfiguration parameter. This action has the same effect as right-clicking on a patch configuration in the Patch Design view and then selecting Build a Patch.

## Syntax

BuildPatchConfiguration (strPatchConfigName as string)

## Parameters

**Table 14** • BuildPatchConfiguration Method Parameters

Parameter	Description
<b>strPatchConfigName</b>	Enter the fully qualified path to your project.

## Properties

**Table 15** • Properties Associated with BuildPatchConfiguration Method

Property	Description
<b>PatchConfigErrorCount</b>	Include the error count associated with a particular build.
<b>PatchConfigWarningCount</b>	Include the warning count associated with a particular build.

## Example

The following Visual Basic lines demonstrate this method:

```
'Create the project object
dim pProject
set pProject = CreateObject("ISwiAutoAutomation Interface Version.ISWiProject")

'Call the OpenProject method
'#####
'# THIS SAMPLE WILL NOT EXECUTE PROPERLY WITHOUT A VALID PROJECT PATH
'#####
'pProject.OpenProject("\Your project.ism")

pProject.OpenProject("C:\Documents and Settings\Testlab\My Documents\MySetups\your project name-
21.ism")

'Call the OpenProject method
'#####
'# THIS SAMPLE WILL NOT EXECUTE PROPERLY WITHOUT A VALID PATCH CONFIGURATION NAME
'#####

pProject.BuildPatchConfiguration "Config1"

MsgBox "Patch Congifuration Config1 build with " & _
    pProject.PatchConfigErrorCount & " Errors and " & _
    pProject.PatchConfigWarningCount & " Warnings"
```

## Applies To

- ISWiProject

## BuildPCPFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

The BuildPCPFile method builds a patch package (.msp) file based on the settings in a patch creation properties (.pcp) file.

You do not need to have a project open in order to create a patch.

### Syntax

BuildPCPFile (strPCPFile As String, strPatchFile As String, strLogFile As String, bCreateUpdateExe As Boolean) As Long

### Parameters

**Table 16** ▪ BuildPCPFile Method Parameters

Parameter	Description
<b>strPCPFile</b>	Specify the fully qualified path to a .pcp file. You can create or modify a .pcp file through the Patch Design view.
<b>strPatchFile</b>	Specify the fully qualified path for the .msp file you want to create. Any existing file with this name is overwritten. The file cannot be created if the directory you provided does not exist.
<b>strLogFile</b>	Specify the fully qualified path to the .log file that records this method's status and success in creating the patch package. If the file exists, the current status is appended to it.
<b>bCreateUpdateExe</b>	Set this option to True to have the package wrapped in an executable that applies the patch.

### Return Values

BuildPCPFile() returns the result returned by the Windows Installer function UiCreatePatchPackage.

The BuildPCPFile method builds a patch package (.msp) file based on the settings in a patch creation properties (.pcp) file.

You do not need to have a project open in order to create a patch.

### Applies To

- ISWiProject

## CloseProject Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

To close the project file (.ism or .dim) that you opened with [OpenProject](#), call CloseProject.

### Syntax

CloseProject ()

### Return Values

CloseProject always returns 0.

### Applies To

- [ISWiProject](#)

## CreatePatch Method

**Caution** ▪ This method is deprecated for new development and has been replaced with the *BuildPCPFile* and *BuildPatchConfiguration* methods. To facilitate backward compatibility with existing build scripts, the *CreatePatch* method calls the *BuildPCPFile* method.

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

### Syntax

CreatePatch()

### Applies To

- [ISWiProject](#)

## CreateProject Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

*Project-specific differences are noted where appropriate.*

The CreateProject method creates a new InstallShield project file (.ism) for a Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, or Merge Module project; it create a new InstallShield DIM project file (.dim) for DIM projects.

### Syntax

CreateProject (strISWiProjectFile As String, ByVal projectType As ISWiProjectType)

### Parameters

**Table 17** ▪ CreateProject Method Parameters

Parameter	Description
<b>strISWiProjectFile</b>	Enter the fully qualified path to the .ism or .dim file that you want to create. Include the full file name.
<b>projectType</b>	Specify what type of project you want to create. Valid values are: <ul style="list-style-type: none"><li>• <b>eptMsi (1)</b>—Creates a Basic MSI project.</li><li>• <b>eptScript (-1)</b>—Creates an InstallScript MSI project.</li><li>• <b>eptPro (9)</b>—Creates an InstallScript project.</li><li>• <b>eptProObj (10)</b>—Creates an InstallScript Object project.</li><li>• <b>eptMsm (2)</b>—Creates a Merge Module project.</li><li>• <b>eptDim (15)</b>—Creates a DIM project.</li></ul>

### Example

The following sample code creates a Basic MSI project called TestProject.ism.

```
Dim pProject As ISWiAutoAutomation Interface Version.ISWiProject
Set pProject = CreateObject("ISWiAutoAutomation Interface Version.ISWiProject")

Dim sProjectName As String
sProjectName = "C:\InstallShield 2021 Projects\TestProject.ism"
```

```
pProject.CreateProject sProjectName, eptMsi
```

```
pProject.OpenProject sProjectName, False
```

```
pProject.CloseProject
```

## Applies To

- ISWiProject

## DeleteAdvancedFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object

The DeleteAdvancedFile method deletes the specified advanced file from the current project.

## Syntax

```
DeleteAdvancedFile (pAdvancedFile As ISWiAdvancedFile) As Long
```

## Parameters

**Table 18** ▪ DeleteAdvancedFile Method Parameters

Parameter	Description
<b>pAdvancedFile</b>	Specify the advanced file object to be deleted.

## Example

The following Visual Basic lines demonstrate the DeleteAdvancedFile method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IsWiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pAdvancedFile As ISWiAdvancedFile

Set pAdvancedFile = pProj.ISWiAdvancedFiles.Item(1)
pProj.DeleteAdvancedFile pAdvancedFile

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- ISWiProject

## DeleteComponent Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call DeleteComponent to delete a component in the project. Similar to deleting a component in the Setup Design views, DeleteComponent both removes a component from its feature and permanently deletes it from the project.

### Syntax

DeleteComponent (Component As ISWiComponent)

### Parameters

**Table 19** ▪ DeleteComponent Method Parameters

Parameter	Description
<b>Component</b>	Specify the <b>ISWiComponent</b> object that the method will delete.

### Example

You can use the following lines to delete all components that are associated with the feature FeatureName1:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"

Dim pFeat As ISWiFeature
Dim pComp As ISWiComponent

Set pFeat = pProj.ISWiFeatures.Item("FeatureName1")

For Each pComp In pFeat.ISWiComponents
    pProj.DeleteComponent pComp
Next

pProj.SaveProject
pProj.CloseProject
```

### Applies To

- **ISWiProject**

## DeleteCustomAction Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

Call the DeleteCustomAction method to completely delete a custom action from the current project.

### Syntax

DeleteCustomAction (CustomAction As ISWiCustomAction)

### Parameters

**Table 20** ▪ DeleteCustomAction Method Parameters

Parameter	Description
CustomAction	Pass the <a href="#">ISWiCustomAction</a> object you want to delete from the current project.

### Applies To

- [ISWiProject](#)

## DeleteMergeModule Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the DeleteMergeModule method to completely delete a merge module from the current project.

## Syntax

DeleteMergeModule (FileName As String)

## Parameters

**Table 21** - DeleteMergeModule Method Parameters

Parameter	Description
<b>FileName</b>	Pass the fully qualified file name for the merge module (.msm) file that you want to delete from the project.

## Applies To

- ISWiProject Object

## DeletePatchConfig Method

**Project** - This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the DeletePatchConfig method to delete a patch configuration from your project. Using this method is similar to deleting a patch configuration in the Patch Design view of the IDE.

## Syntax

DeletePatchConfig (PatchConfig As ISWiPatchConfig)

## Parameters

**Table 22** - DeletePatchConfig Method Parameters

Parameter	Description
<b>PatchConfigKey</b>	Pass the name of the patch configuration that you want to delete.

## Applies To

- ISWiProject

## DeletePathVariable Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

Call the DeletePathVariable method to delete a path variable from your project. Using this method is similar to deleting a path variable from the Path Variables view in InstallShield.

**Important** ▪ Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

## Syntax

DeletePathVariable (pPathVar ISWiPathVariable) As Long

## Parameters

**Table 23** ▪ DeletePathVariable Method Parameters

Parameter	Description
<b>pPathVar</b>	Pass the ISWiPathVariable object for the path variable that you want to delete.

## Applies To

- [ISWiProject](#)

## DeleteProductConfig Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*
- *Merge Module*

Call the DeleteProductConfig method to delete a product configuration from your project. Using this method is similar to deleting a product configuration in the Releases view of the IDE.

## Syntax

```
DeleteProductConfig (ProductConfig As ISwiProductConfig)
```

## Parameters

**Table 24** • DeleteProductConfig Method Parameters

Parameter	Description
<b>ProductConfigKey</b>	Pass the name of the product configuration that you want to delete.

## Applies To

- ISWiProject

## DeleteProperty Method

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

Call the DeleteProperty method to delete a property from the Property table. The function returns 0 if successful.

## Syntax

```
Public Function DeleteProperty(ByVal pProperty As ISwiProperty) As Long
```

## Parameters

**Table 25** • DeleteProperty Method Parameters

Parameter	Description
<b>Property</b>	Pass the name of the property you want to delete.

## Example

```
Dim proj As IswiAutoAutomation Interface Version.ISWiProject
Set proj = New IswiAutoAutomation Interface Version.ISWiProject
proj.OpenProject "c:\mysetups\your project name-3.ism"
Dim pProp As IswiAutoAutomation Interface Version.ISWiProperty
Set pProp = proj.ISwiProperties.Item("MyProperty")
proj.DeleteProperty pProp
```

## Applies To

- ISWiProject

## DeleteSetupFile Method

**Project** - The DeleteSetupFile method applies to the following project types.

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object

The DeleteSetupFile method deletes the specified support file from the current project.

## Syntax

DeleteSetupFile (pSetupFile As ISWiSetupFile) As Long

## Parameters

**Table 26** - DeleteSetupFile Method Parameters

Parameter	Description
pSetupFile	The support file object to be deleted.

## Example

The following Visual Basic lines demonstrate the DeleteSetupFile method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pSetupFile As ISWiSetupFile

Set pSetupFile = pProj.ISWiSetupFiles.Item("MySupportFile.abc")
pProj.DeleteSetupFile pSetupFile

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- ISWiProject

## DeleteSetupType Method

**Project** ▪ This information applies to the following project types:

- *InstallScript*
- *InstallScript Object*

The DeleteSetupType method deletes the specified setup type from the current project.

### Syntax

DeleteSetupType (pSetupType As ISWiSetupType) As Long

### Parameters

**Table 27** ▪ DeleteSetupType Method Parameters

Parameter	Description
pSetupType	The setup type object to be deleted.

### Example

The following Visual Basic lines demonstrate the DeleteSetupType method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pSetupType As ISWiSetupType

Set pSetupType = pProj.ISWiSetupTypes.Item(1)
pProj.DeleteSetupType pSetupType

pProj.SaveProject
pProj.CloseProject
```

### Applies To

- *ISWiProject*

## DeleteSQLConnection Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

Call the DeleteSQLConnection method to remove a SQL Server Connection from the project.

## Syntax

Function DeleteSQLConnection(Connection As ISWiSQLConnection) As Long

## Parameters

**Table 28** ▪ DeleteSQLConnection Method Parameters

Parameter	Description
<b>Connection</b>	Specify the connection you want to remove from the project.

## Applies To

- ISWiProject

## DeselectLanguage Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the DeselectLanguage method to deselect a language from the current project.

## Syntax

DeselectLanguage (LangId As String)

## Parameters

**Table 29** ▪ DeselectLanguage Method Parameters

Parameter	Description
<b>LangId</b>	Pass the language ID you want to deselect in a string, as in oProject.DeleteLanguage "1036".

## Applies To

- ISWiProject

## ExportProject Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call ExportProject to convert an .ism file to XML format before checking it into a source code control program.

**Note** ▪ When a project file format is converted to either XML or binary format, the project file extension remains \*.ism.

The .isv file format has been deprecated to version 2.x of InstallShield for Windows Installer and versions of InstallShield Developer prior to 8.x.

### Syntax

ExportProject (strISWiTextProjectFile As String, Optional strISWiProjectFile As String) As Long

### Parameters

**Table 30** ▪ ExportProject Method Parameters

Parameter	Description
strISWiTextProjectFile	Enter the fully qualified path to the .isv file.
strISWiProjectFile	Enter the fully qualified path to the .ism file. This parameter is optional only if the .ism file is already open.

### Applies To

- ISWiProject

## ExportStrings Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

- *InstallScript Object*
- *Merge Module*

Call `ExportStrings` to copy all or a portion of the string entries for a specific language to a tab-delimited Unicode text file (.txt). You can provide the .txt file to a translator who can update the file with translated text. After it has been translated, you can import the translated string entries into your project by calling the [ImportStrings method](#).

## Syntax

`ExportStrings (strfile As String, dTimeStamp As Date, sLang As String) As Boolean`

## Parameters

**Table 31** • ExportStrings Method Parameters

Parameter	Description
<b>strfile</b>	Enter the fully qualified path to the text file that will contain the exported strings. If the file exists, the automation interface overwrites it.  ExportStrings creates a Unicode file.
<b>dTimeStamp</b>	All string entries have a date and time that they were last modified. This timestamp is useful if you want to give the translator only the string entries that are new or have been modified since the last round of translations.  To export only the string entries that have been modified since a specific date, specify the earliest date for the string entries you want to export. The automation interface exports the string entries that have changed on or since that date.  To export all of the entries for the specified language, enter the number 0.
<b>sLang</b>	Specify the identifier for the language whose string entries you want to export to the text file.

## Applies To

- [ISWiProject](#)

## ForceUpgrade Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*

- *Merge Module*

The ForceUpgrade method upgrades the project from an earlier version of InstallShield to the current version.

## Syntax

ForceUpgrade (ISWiProjectFile As String)

## Parameters

**Table 32** ▪ ForceUpgrade Method Parameters

Parameter	Description
<b>ISWiProjectFile</b>	Enter the fully qualified path to the project file (.ism) that you want to upgrade. Include the full file name.

## Applies To

- *ISWiProject*

## GenerateGUID Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

The GenerateGUID method generates a new, unique GUID that is returned as a string.

## Applies To

- *ISWiProject*

## ImportProject Method

**Note** ▪ This method has been deprecated to version 2.x of InstallShield for Windows Installer and versions of InstallShield Developer prior to 8.x.

Call ImportProject to convert an .isv file to an .ism file. If you access your project from a source code control program, InstallShield saves it as a text (.isv) file. However, *OpenProject* and ISCmdBld.exe both require a standard InstallShield project (.ism) file.

Later, you can call [ExportProject](#) to convert the .ism file back to an .isv file before [checking it in](#) to your source control program.

ImportProject fails if the project is already open in the automation interface or in InstallShield.

## Syntax

```
ImportProject (strISWiProjectFile As String, strISWiTextProjectFile As String) As Long
```

## Parameters

**Table 33** - ImportProject Method Parameters

Parameter	Description
<b>strISWiProjectFile</b>	Enter the fully qualified path to the resulting .ism file.
<b>strISWiTextProjectFile</b>	Enter the fully qualified path to the .isv file.

## Error Codes

**Table 34** - ImportProject Method Error Codes

Code	Description
<b>1007</b>	The project file is already open.
<b>1009</b>	Could not import the project.
<b>1012</b>	The .isv file is missing.

## Applies To

- [ISWiProject](#)

## ImportStrings Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

Call ImportStrings to import the contents of a tab-delimited text file (.txt) into the project for a specific language. This method is useful when you have exported the entries to a text file and had them translated.

## Syntax

```
ImportStrings (strfile As String, sLang As Integer, Optional Enum eiType, Optional strLogFile As String)
As Boolean
```

## Parameters

**Table 35** • ImportStrings Method Parameters

Parameter	Description
<b>strfile</b>	Enter the fully qualified path to the text file that contains the string entries that you want to import.
<b>sLang</b>	Specify the identifier for the language whose string entries you want to import to the project.
<b>eiType</b>	Specify how you want to handle conflicts when importing string entries: <ul style="list-style-type: none"> <li>● <b>eiIgnore (0)</b>—Do not replace the string entry's value if it already exists in the project for the specified language.</li> <li>● <b>eiOverwrite (1)</b>—Replace the project's existing string entry with the one in the text file. This is the default value for this optional parameter.</li> </ul>
<b>strLogFile</b>	Specify the fully qualified path to the log file that should contain the status and success of importing the string entries. The log file records any conflicts in importing string entries and lists any improperly formatted, hence unusable, entries. If the log file exists, it is overwritten.
	 <p><b>Note</b> • This parameter is optional.</p>

## Applies To

- ISWiProject

## OpenProject Method

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

To open your project so that you can modify it through the automation interface, call `OpenProject` with the fully qualified path to your `.ism` or `.dim` file. This method is equivalent to loading a project in InstallShield.

---

**Note** ▪ *The `ISWiProject.OpenProject` method fails if the project is open in InstallShield.*

## Syntax

OpenProject (strISWiProjectFile As String, Optional ByVal bReadOnly As Boolean) As Long

## Parameters

**Table 36** ▪ OpenProject Method Parameters

Parameter	Description
<b>strISWiProjectFile</b>	Enter the fully qualified path to the project file (.ism or .dim).
<b>bReadOnly</b>	Determines whether the project is opened with write privileges. True opens the project as a read-only file. The default value for this optional parameter is False.

## Return Values and Errors

**Table 37** ▪ OpenProject Method Return Values and Errors

Return Value	Description
<b>0</b>	Project successfully opened.
<b>1</b>	Project opened, but is locked by some other process.
<b>2</b>	Attempted to open project for write access, but project opened in read-only mode.
<b>3</b>	There was a problem creating the merge module catalog. Verify that the merge module search path is correct (via the File Locations tab of the Options dialog box or using -o for the Standalone Build), verify that no merge modules on the merge module path are corrupt, or self-register IsMMUpdater2.dll.
<b>Error Code 1100</b>	Unable to open file: %1. Ensure that the file is a valid InstallShield project.
<b>Error Code 1101</b>	Unable to open file: %1. This project was created using a previous version of InstallShield Developer, InstallShield–Windows Installer or InstallShield Express.
<b>Error Code 1102</b>	Unable to open file: %1. This project was created using InstallShield Professional or InstallShield Express 2.xx.
<b>Error Code 1103</b>	Unable to open file: %1. The project was created using a more recent version of InstallShield Developer or the project has been updated to a more recent version of InstallShield, InstallShield DevStudio, or InstallShield Developer.

## Applies To

- ISWiProject

## RemoveFeature Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

The RemoveFeature method permanently deletes a feature from the current project.

### Syntax

RemoveFeature (Feature As ISWiFeature) As Long

### Parameters

**Table 38** ▪ RemoveFeature Method Parameters

Parameter	Description
<b>Feature</b>	The item in <a href="#">ISWiFeatures</a> that you want to remove.

### Example

The following code fragment opens a project, deletes the feature named NewFeature1, and then saves and closes the project:

```
Dim pProj As ISWiProject
Dim pFeat As ISWiFeature

Set pProj = New ISWiProject
pProj.OpenProject "C:\Test\SampleProject.ism"

Set pFeat = pProj.ISWiFeatures.Item("NewFeature1")
pProj.RemoveFeature pFeat

pProj.SaveProject
pProj.CloseProject
```

When RemoveFeature is a member of [ISWiFeature](#), it cannot be used to delete the current feature. However, you can call it to delete a subfeature, such as the first subfeature under NewFeature1 in the following example:

```
Set pFeat = pProj.ISWiFeatures.Item("NewFeature1")
pProj.RemoveFeature pFeat.Features(1)
```

### Applies To

- [ISWiProject](#)
- [ISWiFeature](#)

## SaveProject Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

To save any changes that you have made to your project file through the automation interface, call the SaveProject method.

### Syntax

SaveProject ()

### Return Values and Errors

**Table 39** ▪ SaveProject Method Values

Return Value	Description
<b>ERROR_SUCCESS (0)</b>	Project is saved.
<b>Error Code 1104</b>	Unable to save file: %1. The project is open in read-only mode or is being used by another process.

### Applies To

- ISWiProject

## ISWiAdvancedFile Object

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object

ISWiAdvancedFile represents an advanced file in your project. The advanced file can be an existing one from the Support Files view (or the Support Files/Billboards view) in InstallShield or one added by calling [AddAdvancedFile](#).

Use the project's [ISWiAdvancedFiles](#) collection to access a specific advanced file. You must specify either an index number or the file key for the Item property of ISWiAdvancedFiles.

## Members

**Table 40** • ISWiAdvancedFile Object Members

Name	Type	Description
<b>Name</b>	Read-Only Property	Stores the file key of the advanced file. See the description of ISWiFile above for more information about the file key.
<b>BuildSourcePath</b>	Read-Write Property	Stores the advanced file's fully qualified source filename. Any path variables are resolved to the actual path.
<b>Disk</b>	Read-Write Property	<p>This enumerated integer property specifies the Advanced Files folder in which you want to add the advanced file. Specify one of the following values:</p> <ul style="list-style-type: none"> <li>• <b>edtDisk1 (1)</b>—Specifies the Disk 1 folder.</li> <li>• <b>edtLastDisk (-1)</b>—Specifies the Last Disk folder.</li> <li>• <b>edtOther (0)</b>—Specifies the Other folder.</li> </ul>

## Example

The file key is visible in the IDE only as the first entry in the Direct Editor view's ISDisk1 table. Instead of using the file key, you could write code similar to the following example to check for a certain file name:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pAdvancedFile As ISWiAdvancedFile

For Each pAdvancedFile In pProj.ISWiAdvancedFiles
    If UCase(pAdvancedFile.BuildSourcePath) = "C:\MY FILES\MYADVANCEDFILE.EXT" Then
        Exit For
    End If
Next

pProj.SaveProject
pProj.CloseProject
```

If the file C:\My Files\MyAdvancedFile.ext is found among the project's setup files, the For loop ends, and pAdvancedFile holds a copy of the ISWiAdvancedFile object for C:\My Files\MyAdvancedFile.ext.

## Applies To

- ISWiProject

## ISWiAutomaticUpgradeEntry Object

**Project** • This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

The `ISWiAutomaticUpgradeEntry` object represents an automatic upgrade item in the Upgrades view of the InstallShield interface.

## Members

**Table 41** - `ISWiAutomaticUpgradeEntry` Object Members

Name	Type	Description
<b>Delete</b>	Method	Deletes the <code>AutomaticUpgradeEntry</code> from the project file.
<b>Name</b>	Read-Write Property	Sets the name of the upgrade item as displayed in the IDE.
<b>UpgradedSetupPath</b>	Read-Write Property	Sets the path to the MSI package that needs to be upgraded. The build engine will create the settings required to upgrade this setup.
<b>ReleaseFlag</b>	Read-Write Property	Configure this upgrade entry to only be built into the setup when a certain release flag has been set.

## Applies To

- `ISWiProject`

## Delete Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call this method to delete the `ISWiAutomaticUpgradeEntry` from the project file.

## Syntax

`Delete()`

## Applies To

- `ISWiAutomaticUpgradeEntry`

## ISWiCustomAction Object

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

ISWiCustomAction represents a custom action in the Custom Actions and Sequences view (or the Custom Actions view) of InstallShield. You can retrieve a custom action by specifying an item in the [ISWiCustomActions](#) collection.

### Members

**Table 42** - ISWiCustomAction Object Members

Property	Type	Description
<b>ActionType</b>	Read-Write Property	Holds the numeric custom action type. For more information, see <a href="#">Custom Action Type Overview</a> .
<b>Comment</b>	Read-Write Property	An optional comment for the custom action.
<b>Name</b>	Read-Write Property	The name of the custom action.
<b>Source</b>	Read-Write Property	Specifies the source of the custom action. See <a href="#">Creating Custom Actions in the Custom Actions and Sequences View (or the Custom Actions View)</a> for the required Source property for different types of custom actions.
<b>SourceEx</b>	Write-Only Property	Sets a custom action source property, same as the Source property. SourceEx replaces the existing binary record for the new path when you change a source that is stored in the Binary table. If other custom actions use the path, their path is also updated. Source creates a new binary record when other custom actions use the path. Only the path in the custom action is updated.
<b>Target</b>	Read-Write Property	Specifies the target of the custom action. See <a href="#">Creating Custom Actions in the Custom Actions and Sequences View (or the Custom Actions View)</a> for the required Target property for different types of custom actions.

### Applies To

- [ISWiProject](#)

## ISWiComponent Object

---

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

*Project-specific differences are noted where appropriate.*

ISWiComponent represents a component in the InstallShield user interface. You can retrieve a component by specifying an item in the [ISWiComponents](#) collection. The component can be one created in the IDE or as a result of calling [AddComponent](#).

Many component attributes are available in the automation interface through this object's methods and properties. Refer to the following table to see which methods, properties, and collections are available for your project type.

## Members

**Table 43** • ISWiComponent Object Members

Name	Project	Type	Description
<b>AddComponentSubFolder</b>	InstallScript, InstallScript Object	Method	Adds a subfolder to the current ISWiComponent.
<b>AddDynamicFileLinking</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Method	Adds a dynamic file link to the current component.
<b>AddEnvironmentVar</b>	Basic MSI, InstallScript MSI, Merge Module	Method	Adds an environment variable to the current component.
<b>AddFile</b>	All	Method	Adds a file to the current component.
<b>AddRemoveFile</b>	Basic MSI, InstallScript MSI, Merge Module	Method	Adds a file or folder removal entry to the current component.
<b>Attrib64BitComponent</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Set this property to True to have the component registered as 64-bit. Setting this property to False causes the component to be registered as 32-bit. If the component is 64-bit and is replacing a 32-bit component, be sure to provide a new GUID via the GUID property.</p> <p>Note that 64-bit support requires version 2.0 of the Windows Installer service.</p>
<b>Comments</b>	All	Read-Write Property	Gets or sets the comments for this component.
<b>Compressed</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the component's Compressed property, which specifies whether to compress the component's files (True) or leave them uncompressed (False) when the files are stored in a cabinet file by the release builder.

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>Condition</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Contains any condition associated with the component.
<b>Destination</b>	All	Read-Write Property	<p>Gets or sets the component's destination. The following formats are valid:</p> <ul style="list-style-type: none"> <li>• (Windows Installer based projects only:) [INSTALLDIR]</li> <li>• (Windows Installer based projects only:) [ProgramFilesFolder]Subfolder</li> <li>• (InstallScript projects only:) &lt;TARGETDIR&gt;</li> <li>• (InstallScript projects only:) &lt;WINDIR&gt;\Subfolder</li> <li>• C:\FolderName</li> </ul>  <p><b>Important</b> • Setting the Destination property for the ISWiComponent object resets the object's SourceLocation property. Therefore, any code that sets the SourceLocation property should be placed after any code that sets the Destination property.</p>
<b>DeviceDriverFlags</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property is no longer supported.
<b>DeviceDriverFlagsEx</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property enables you to specify the flag settings for device drivers and run-time options directly from the automation layer.
<b>DeviceDriverSetRedist</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property sets the .dll used at run time for all device driver installations.
<b>DeviceDriverUse64BitRedist</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property is no longer supported.

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>DeviceDriverUseLocalizedRedist</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property is no longer supported.
<b>Difference</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the component's Difference property, which specifies whether to accept (True) or override (False) the default behavior of the media builder when building a differential media—which is to exclude a file in this component from the differential media if the same file (with the same date and time, size, and attributes) exists in each of the specified comparison media.
<b>DotNetApplicationFile</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	To install your assembly as private, set this attribute to the FileKey of the file that contains your assembly. If this property is set to NULL, your assembly will be installed to the Global Assembly Cache.
<b>DotNetAssembly</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the component's .NET Assembly property, which specifies whether the component's files are installed as local .NET assemblies (True) or not installed as assemblies (False).
<b>DotNetCOMInterop</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Set this to True if your .NET assembly needs to be available from COM calls.
<b>DotNetInstallerClass</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Set this to True if your assembly implements methods from the .NET Installer namespace.
<b>DotNetInstallerClassArgCommit</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property allows you to specify argument lists for the Installer class when the Commit method is called.
<b>DotNetInstallerClassArgInstall</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property allows you to specify the argument lists for the Install execution context for the Installer class.

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>DotNetInstallerClassArgRollback</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property allows you to specify argument lists for the Installer class when the Rollback method is called.
<b>DotNetInstallerClassArgUninstall</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property allows you to specify the argument lists for the Uninstall execution context for the Installer class.
<b>DotNetPrecompile</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	If this property is set to True, at installation the setup creates a native image from the .NET assembly and installs it to the native image cache on the target system. This allows the assembly to load and execute faster, because it restores code and data structures from the native image cache rather than from just-in-time (JIT) compilation.
<b>DotNetScanAtBuild</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	This property instructs the build engine on how to handle your assembly. Set it to one of the following values: <ul style="list-style-type: none"> <li>● <b>ednbNone (0)</b>—Build does nothing.</li> <li>● <b>ednbProps (1)</b>—Build scans your assembly for properties.</li> <li>● <b>ednbDepAndProps (2)</b>—Build scans your assembly for properties and dependencies.</li> </ul>
<b>ExtractAtBuild</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the component's COM Extract at Build setting. Possible values are True and False.
<b>FTPLocation</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the component's FTP Location property, which specifies an FTP location for the component.
<b>GUID</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Holds a string GUID, also known as the Component Code property, surrounded by braces—{12345678-1234-1234-1234-1234567890AB}, for example.
<b>HTTPLocation</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the component's HTTP Location property, which specifies an HTTP location for the component.

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>ImportINIFile</b>	All	Method	Imports INI files from the automation layer.
<b>ImportRegFile</b>	All	Method	Merges the contents of a REG file with the registry data for this component.
<b>IsDeviceDriver</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	If this Boolean property is true, the key file for this component is a device driver package; if the property is false, the key file is not a device driver package.
<b>IsPlatformSelected</b>	InstallScript, InstallScript Object	Read-Write Property	<p>In conjunction with the PlatformSuiteCheck property, gets or sets the component's Platform Suite(s) property, which specifies to what platform suites, if any, the component is specific.</p> <p>Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>• epsMSBackOffice = 32 (&amp;H20)</li> <li>• epsMSSmallBusinessServer = 256 (&amp;H100)</li> <li>• epsMSSmallBusinessServerWithRestrictiveLicenses = 512 (&amp;H200)</li> <li>• epsTerminalServices = 16 (&amp;H10)</li> <li>• epsWin2kAdvSvrOrWinDotNetEnterpriseServer = 128 (&amp;H80)</li> <li>• epsWin2kOrWinDotNetDatacenterServer = 64 (&amp;H40)</li> <li>• epsWinServer = 4</li> <li>• epsWinWorkstation = 8</li> <li>• epsWinXPHome = 2</li> <li>• epsWinXPPro = 1</li> <li>• epsArchIa64 = 1024 (&amp;H400)</li> <li>• epsArchAmd64 = 2048 (&amp;H800)</li> <li>• epsArchIntel32 = 4096 (&amp;H1000)</li> <li>• epsWinServer2003R2 = 8192 (&amp;H2000)</li> </ul> <p>For example:</p> <pre>pFeature.IsPlatformSelected(epsWinXPHome) = True</pre>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>ISWiComponentSubFolders</b>	InstallScript, InstallScript Object	Collection	Contains all of the subfolders associated with this component.
<b>ISWiDynamicFileLinkings</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, Merge Module	Collection	Contains all of the dynamic file links that are associated with a specified component.
<b>ISWiEnvironmentVars</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Collection	Contains all of the environment variables that are associated with this component.
<b>ISWiFiles</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the files associated with this component.
<b>ISWiFolders</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the folders associated with this component.
<b>ISWiRemoveFiles</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Method	Returns an ISWiRemoveFiles collection that contains all of the file and folder removal entries that are associated with the current component.

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>KeyPath</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	 <p><b>Note</b> • <i>ISWiComponent.KeyPathType must be set before setting ISWiComponent.KeyPath. Errors result if this is done in the reverse order.</i></p> <p>Contains the file or registry entry that serves as this component's key path. The exact type is indicated by the KeyPathType property, below.</p> <p>When the key path is a key file, it contains the file key. You can view this value in the Key column of a component's file list, but be aware that file keys are subject to change when the files are dynamically linked. The file key is the same as the Name property of an <a href="#">ISWiFile</a> object.</p> <p>When the key path is a registry value, there is a specially formatted string that contains the registry key. The path to the registry key is enclosed in square brackets and separated from the value name with a vertical bar (or pipe character). For example, the following lines set the key path for the component m_MyComponent to the value MyName under HKEY_LOCAL_MACHINE\Software\MyCompany\Settings:</p> <pre>m_MyComponent.KeyPathType = kptRegistry m_MyComponent.KeyPath = "[HKEY_LOCAL_MACHINE\Software\MyCompany\Settings] MyName"</pre> <p>A file cannot serve as the key file if it is dynamically linked.</p>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>KeyPathType</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>ISWiComponent.KeyPathType <i>must</i> be set before setting ISWiComponent.KeyPath. Errors result if this is done in the reverse order. Stores a value that points to the precise type of key path contained in the KeyPath property. Specify one of the following types:</p> <ul style="list-style-type: none"> <li>● kptRegistry (1)</li> <li>● kptFile (2)</li> <li>● kptFolder (3)</li> <li>● kptODBC (4)</li> </ul> <p>Note that the automation interface can set the key path type only to kptRegistry or kptFile, but the other values are possible return values if you are reading the current key path type.</p>
<b>Miscellaneous</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the component's Miscellaneous property, which associates a text string with the component.
<b>Name</b>	All	Read-Only Property	Component name of the current item in the collection.
<b>NeverOverwrite</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Instructs the installer whether to replace an existing component. Specify True to leave the existing component or False to replace it.
<b>OSFilter</b>	InstallScript, InstallScript MSI, InstallScript Object	Read-Write Property	Gets or sets the component's Operating Systems setting. If the target machine's operating system does not match one of the operating systems that are specified for this setting, the component is not installed. By default, components are operating system independent, meaning that none of the component's data are specific to certain operating systems.

**Table 43** ■ ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>OSFilter (cont.)</b>			<p>Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>• eosOSIndependent = 0</li> <li>• eosWin95 = &amp;H10 (16)</li> <li>• eosWin98 = &amp;H40 (64)</li> <li>• eosWinMe = &amp;H80 (128)</li> <li>• eosWinNT4 = &amp;H10000 (65536)</li> <li>• eosWin2000 = &amp;H100000 (1048576)</li> <li>• eosWinXP = &amp;H400000 (4194304)</li> <li>• eosWinServer2003 = &amp;H800000 (8388608)</li> <li>• eosWinVista = &amp;H1000000 (16777216)—These constants are for Windows Vista and Windows Server 2008.</li> <li>• eosWin7 = &amp;H2000000 (33554432)—These constants are for Windows 7 and Windows Server 2008 R2.</li> <li>• eosWin8 = &amp;H4000000 (67108864)—These constants are for Windows 8 and Windows Server 2012.</li> <li>• eosWin81 = &amp;H8000000 (134217728)—These constants are for Windows 8.1 and Windows Server 2012 R2.</li> <li>• eosAll = &amp;HFD100D0 (265355472)</li> </ul> <p>You can specify multiple platforms; for example, <b>eosWin7 Or eosWinServer2008 Or eosWinVista Or eosWinServer2003</b>.</p> <div>  <p><b>Tip</b> ■ Use this property with the <i>IsPlatformSelected</i> property to distinguish between Windows Vista and Windows Server 2008, or between Windows 7 and Windows Server 2008 R2, or between Windows 8 and Windows Server 2012, or between Windows 8.1 and Windows Server 2012 R2.</p> </div>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>OverwriteMainOptions</b>	InstallScript, InstallScript Object	Read-Write Property	<p>In conjunction with the OverwriteSubOptionsVersion and OverwriteSubOptionsDate properties, gets or sets the component's Overwrite property, which specifies whether the component's files overwrite already-existing versions on the target system always, never, or conditionally based on date/time stamp or version number. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>ecommoAlways (0)</b>—Files on the target system are always overwritten.</li> <li>● <b>ecommoByDate (1)</b>—Files on the target system are conditionally overwritten based on date/time stamp as specified by the OverwriteSubOptionsDate property.</li> <li>● <b>ecommoByVersion (2)</b>—Files on the target system are conditionally overwritten based on version number as specified by the OverwriteSubOptionsVersion property.</li> <li>● <b>ecommoByVersionThenDate (3)</b>—Files on the target system are conditionally overwritten based on version number or, if the file on your distribution media and the file on the target system have the same version number or if neither file has a version number, by date/time stamp as specified by the OverwriteSubOptionsVersion and OverwriteSubOptionsDate properties.</li> <li>● <b>ecommoNever (4)</b>—Files on the target system are never overwritten.</li> </ul>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>OverwriteSubOptionsDate</b>	InstallScript, InstallScript Object	Read-Write Property	<p>In conjunction with the OverwriteMainOptions and OverwriteSubOptionsVersion properties, gets or sets the component's Overwrite property, which specifies whether the component's files overwrite already-existing versions on the target system always, never, or conditionally based on date/time stamp or version number. Ignored if OverwriteMainOptions is set to ecomomoAlways, ecomomoByVersion, or ecomomoNever. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>ecomomoNewer (0)</b>—A file on the target system is overwritten if the file on your distribution media has a more recent date and time stamp.</li> <li>● <b>ecomomoNewerOrSame (1)</b>—A file on the target system is overwritten if the file on your distribution media has a more recent or the same date and time stamp.</li> <li>● <b>ecomomoOlder (2)</b>—A file on the target system is overwritten if the file on your distribution media has a less recent date and time stamp.</li> </ul>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>OverwriteSubOptionsVersion</b>	InstallScript, InstallScript Object	Read-Write Property	<p>In conjunction with the OverwriteMainOptions and OverwriteSubOptionsDate properties, gets or sets the component's Overwrite property, which specifies whether the component's files overwrite already-existing versions on the target system always, never, or conditionally based on date/time stamp or version number. Ignored if OverwriteMainOptions is set to ecomsoAlways, ecomsoByDate, or ecomsoNever. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>ecomsoNewer (0)</b>—A file on the target system is overwritten if the file on your distribution media has a higher version number.</li> <li>● <b>ecomsoNewerOrSame (1)</b>—A file on the target system is overwritten if the file on your distribution media has a higher or the same version number.</li> <li>● <b>ecomsoOlder (2)</b>—A file on the target system is overwritten if the file on your distribution media has a lower version number.</li> </ul>
<b>Permanent</b>	All	Read-Write Property	<p>This property corresponds to the Permanent component property in the IDE. Set Permanent to True to make sure the component is never removed; False otherwise.</p>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>PlatformSuiteCheck</b>	InstallScript, InstallScript Object	Read-Write Property	<p>In conjunction with the <b>IsPlatformSelected</b> property, gets or sets the component's Platform Suite(s) property, which specifies to what platform suites, if any, the component is specific. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>ecpscAll (0)</b>—The setup installs the component's files only if all of the suites that are specified by the IsPlatformSelected property exist on the target system.</li> <li>● <b>ecpscAtLeastOne (1)</b>—The setup installs the component's files only if at least one of the suites that are specified by the IsPlatformSelected property exist on the target system.</li> <li>● <b>ecpscSuiteIndependent (2)</b>—Installation of the component's files does not depend on the target system's suite.</li> </ul>
<b>PotentiallyLocked</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the component's Potentially Locked property, which specifies whether already-installed versions of the component's files may be locked—that is, in use by another application—during setup.
<b>RegFileToMergeAtBuild</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Provides the complete path to a .reg file to have it merged with the component's registry entries at build time.

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>RegistrationType</b>	Basic MSI, InstallScript MSI, Merge Module	Property	<p>The following options are available for determining the source of the registration information for this component:</p> <ul style="list-style-type: none"> <li>● <b>rgtNone (0)</b>—InstallShield will not dynamically extract the data or mark the component as self-registering, but any information in the COM Registration advanced setting will be registered.</li> <li>● <b>rgtSelfReg (-1)</b>—The files in this component will have their self-registration routines invoked by the installer.</li> <li>● <b>rgtExtractAtBuild (-2)</b>—Dynamically extracts COM registration information when you build a release.</li> </ul> <p>Because the Registration Type property has been removed from the component views in the IDE, setting the RegistrationType property in the automation interface has the following effects:</p> <ul style="list-style-type: none"> <li>● Using rgtNone sets the component's COM Extract at Build property to No.</li> <li>● Using rgtSelfReg sets the component's COM Extract at Build property to No, and sets each file in the component to use self-registration.</li> <li>● Using rgtExtractAtBuild sets the component's COM Extract at Build property to Yes, and sets each file in the component not to use self-registration.</li> </ul>
<b>RemoteInstallation</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Use one of the following options to install the component's files locally or leave them on the distribution medium:</p> <ul style="list-style-type: none"> <li>● <b>rfsLocal (0)</b>—Installs the files to the folder stored in the component's Destination property.</li> <li>● <b>rfsSource (1)</b>—Leaves the files on the distribution medium.</li> <li>● <b>rfsOptional (2)</b>—The component follows the feature's property.</li> </ul>

**Table 43** • ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>RemoveComponentSubFolder</b>	InstallScript, InstallScript Object	Method	Removes a subfolder to the current ISWiComponent.
<b>RemoveDynamicFileLinking</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Method	Removes a dynamic file link from the current component.
<b>RemoveEnvironmentVar</b>	Basic MSI, InstallScript MSI, Merge Module	Method	Removes an environment variable from the current component.
<b>RemoveFile</b>	All	Method	Removes a file from the current component.
<b>RemoveRemoveFile</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Method	Removes a file or folder removal entry from the current component. To remove a file or folder removal entry from the project, pass the ISWiRemoveFile object.
<b>SelfRegister</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the component's Self-Register property, which specifies whether the component's files are self-registering.
<b>SharedDLLRefCount</b>	All	Read-Write Property	True indicates that the installer should increment a reference count for each file in this component when it is installed, False otherwise.
<b>SourceLocation</b>	All	Read-Write Property	Provides the name of a folder in the compressed setup package or in the release location where this component's files are stored when you build a release. This property is identical to a component's Source Location setting in InstallShield.
 <p><b>Important</b> • Setting the Destination property for the ISWiComponent object resets the object's SourceLocation property. Therefore, any code that sets the SourceLocation property should be placed after any code that sets the Destination property.</p>			

**Table 43** ▪ ISWiComponent Object Members (cont.)

Name	Project	Type	Description
<b>Transitive</b>	All	Read-Write Property	Set this property to True to have the installer re-evaluate the condition when this component is reinstalled, False otherwise.

### Applies To

- ISWiFeature

## AddComponentSubFolder Method

**Project** ▪ This information applies to the following project types:

- InstallScript
- InstallScript Object

The AddComponentSubFolder method adds a component subfolder to the current component or component subfolder.

### Syntax

AddComponentSubFolder (Name As String) As ISWiComponentSubFolder

### Parameters

**Table 44** ▪ AddComponentSubFolder Method

Parameter	Description
<b>Name</b>	Pass the name for the subfolder that you want to add.

### Example

The following Visual Basic lines demonstrate the AddComponentSubFolder method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pComponent As ISWiComponent
Dim pComponentSubFolder As ISWiComponentSubFolder

Set pFeature = pProj.ISWiFeatures.Item("MyFeature")
Set pComponent = pFeature.ISWiComponents.Item("MyComp")
Set pComponentSubFolder = pComponent.AddComponentSubFolder("MyCompSubFolder")

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- [ISWiComponent](#)
- [ISWiComponentSubFolder](#)

## AddDynamicFileLinking Method

**Project** ▪ The information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *Merge Module*

Call `AddDynamicFileLinking` to add a dynamic file link to a specified component. All of the files that are in the folder that you specify are automatically incorporated into your installation.

**Project** ▪ In *Basic MSI*, *InstallScript MSI*, and *Merge Module* projects, all new dynamic file links that you add use the best practice method of component creation by default. For more information, see [Determining the Appropriate Component Creation Method for Dynamically Linked Files](#).

## Syntax

`AddDynamicFileLinking (sSourceFolder As String) As ISWiDynamicFileLinking`

## Parameters

**Table 45** ▪ AddDynamicFileLinking Method Parameters

Parameter	Description
<b>sSourceFolder</b>	Pass the fully qualified path to the folder that contains the files that you want to be dynamically linked.

## Example

The following Visual Basic example adds a dynamic link to **MyDynamicFiles** to the component **MyComponent**:

```
m_ISWiFeature.ISWiComponents("MyComponent").AddDynamicFileLinking "C:\Build 141\MyDynamicFiles"
```

All of the files in the **MyDynamicFiles** folder are added to the project. The folder is scanned before every build, and any new or changed files are automatically incorporated into your project.

## Applies To

- [ISWiComponent](#)

## AddEnvironmentVar Method

**Project** ▪ The AddEnvironmentVar method applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

Call AddEnvironmentVar to add an environment variable to a component.

### Syntax

```
AddEnvironmentVar (sName As String) As ISWiEnvironmentVar
```

### Parameters

**Table 46** ▪ AddEnvironmentVar Method Parameters

Parameter	Description
sName	Specifies the name of the environment variable.

### Example

The following Visual Basic example adds the environment variable **MyEnvironment** to the component **MyComponent**:

```
m_ISWiFeature.ISWiComponents("MyComponent").AddEnvironmentVar "MyEnvironment"
```

### Applies To

- ISWiComponent

## AddFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Project-specific differences are noted where appropriate.

Call `AddFile` to add a file to a specified component or, in InstallScript projects, a component subfolder. The files that are added with this method have static file links.

## Syntax

```
AddFile (FileName As String) As ISWiFile
```

## Parameters

**Table 47** ▪ AddFile Method Parameters

Parameter	Description
<b>FileName</b>	Pass the fully qualified file name for the individual file that you want to add to this component or component subfolder.

## Example

The following Visual Basic example adds the file `MyFile.exe` to the component `MyComponent`:

```
m_ISWiFeature.ISWiComponents("MyComponent").AddFile "C:\Build 141\MyFile.exe"
```

## Applies To

- `ISWiComponent`
- `ISWiComponentSubFolder`

## AddRemoveFile Method

**Project** ▪ The `AddRemoveFile` method applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

The `AddRemoveFile` method adds a file or folder removal entry to the current component. This file and folder removal capability is useful for scenarios such as removing application-created files that your installation does not otherwise track.

## Syntax

```
AddRemoveFile () As ISWiRemoveFile
```

## Applies To

- `ISWiComponent`

## DeviceDriverFlagsEx Property

**Project** ▪ This information applies to the following project types:

Project-specific differences are noted where appropriate.

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

The DeviceDriverFlagsEx property enables you to specify the flag settings for device drivers and runtime options directly from the automation layer. You can pass the following property values to this property. Pass more than one value by using OR.

**Table 48** ▪ DeviceDriverFlagsEx Property Values

Value	Definition
0	Not set (default).
1	To replace any existing driver for the device with this driver, pass this property value to the DeviceDriverFlagsEx property. If you do not pass this property and a driver already exists for the device, your driver is not installed.
2	To prevent the Connect Device to Computer dialog from being displayed during the installation of a device driver if a device matching the driver is not connected to a computer, pass this property value.
4	If you pass this property value to the DeviceDriverFlagsEx property, the installation creates an Add or Remove Programs entry for the device driver only; the installation does not create an additional entry for the installation itself. DIFxApp does not support this feature on Windows Vista and later.
8	By default, DIFxApp does not install unsigned driver packages or driver packages that have missing files. To override this default behavior, pass this value to the DeviceDriverFlagsEx property.
16	By default, when DIFxApp uninstalls a driver package, DIFxApp does not remove the binary files that were copied to the system when it installed the driver. To override this default behavior, pass this value to the DeviceDriverFlagsEx property.  If you do pass this value, DIFxApp removes a binary file from the system only if the binary file is identical to the corresponding binary file in the driver store.

**Caution** ▪ Pass this value only if you can verify that the driver’s binary files are not required by any other driver package or application.

**Table 48** ▪ DeviceDriverFlagsEx Property Values (cont.)

Value	Definition
<b>Other value</b>	Invalid. This is a fatal installation error. DIFxApp does not install the component and uninstalls any components in the same installation package that were installed before this component.

## Applies To

- ISWiComponent

## DeviceDriverSetRedist Property

**Project** ▪ The DeviceDriverSetRedist property applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

The DeviceDriverSetRedist property sets the custom action runtime .dll used for all device driver installations in the project. This property takes the following values:

- **eddr32Bit**—Specifies that the device drivers in this project target 32 bit machines and that the installation uses runtime dialogs for English only.
- **eddf32BitLocalized**—Specifies that the device drivers in this project target 32 bit machines and that the installation includes all localized installation runtime dialogs.
- **eddf64Bit**—Specifies that the device drivers in this project target Itanium 64 bit machines and that the installation uses runtime dialogs for English only.
- **eddf64BitLocalized**—Specifies that the device drivers in this project target Itanium 64 bit machines and that the installation includes all localized installation runtime dialogs.
- **eddf64BitAMD**—Specifies that the device drivers in this project target AMD 64 bit machines and that the installation uses runtime dialogs for English only.
- **eddf64BitAMDLocalized**—Specifies that the device drivers in this project target AMD 64 bit machines and that the installation includes all localized installation runtime dialogs.

The English runtime .dll file is smaller than the localized .dll file, so if space is an issue and you do not need the extra language runtime dialogs, use one of the English-only values (not one of the localized values).

If you use one of the localized values, the installation uses a runtime .dll that includes dialogs and text for the following languages:

- Arabic (Saudi Arabia)
- Spanish - Modern Sort (Spain)
- Norwegian (Bokmål) (Norway)
- Chinese (People's ROC)

- Finnish (Finland)
- Dutch (Netherlands)
- Chinese (Taiwan)
- French (France)
- Polish (Poland)
- Czech (Czech Republic)
- Hebrew (Israel)
- Portuguese (Brazil)
- Danish (Denmark)
- Hungarian (Hungary)
- Portuguese (Portugal)
- German (Germany)
- Italian (Italy)
- Russian (Russia)
- Greek (Greece)
- Japanese (Japan)
- Swedish (Sweden)
- English (United States)
- Korean (Korea)
- Turkish (Turkey)

## Applies To

- ISWiComponent

## ImportINIFile Method

---

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

Call the ImportINIFile method to import INI files from the automation layer.

## Syntax

ImportINIFile(INIFile As String, [DirectoryID As String])

## Parameters

**Table 49** - ImportINIFile Method Parameters

Parameter	Description
<b>INIFile</b>	This represents the full path to the INI file that needs to be imported.
<b>DirectoryID</b>	The directory must be a valid MSI Directory identifier such as INSTALLDIR. The directory is optional if you do not specify it. InstallShield will use the component directory.

## Applies To

- ISWiComponent

## ImportRegFile Method

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the ImportRegFile method to import the contents of a registry (REG) file into the registry data for a specified component. This method mimics manually importing a REG file in the IDE.

## Syntax

ImportRegFile (RegFile As String, Optional OverWrite As Boolean)

## Parameters

**Table 50** - ImportRegFile Method Parameters

Parameter	Description
<b>RegFile</b>	Specify the fully qualified path to the REG file that you want to import.
<b>OverWrite</b>	<p>Choose one of the following options for instructing ImportRegFile how you want to handle conflicts when merging registry data:</p> <p>True—If a value exists in the component's registry data, overwrite it with the value from the REG file.</p> <p>False—If a value in the REG file is already present in the component's registry data, do not import that value.</p> <p>The default value for this optional parameter is True.</p>

## Applies To

- ISWiComponent

## ISWiRemoveFiles Method

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

The ISWiRemoveFiles method returns an ISWiRemoveFiles collection that contains all of the file and folder removal entries that are associated with the current component.

## Syntax

ISWiRemoveFiles As ISWiRemoveFiles

## Parameters

**Table 51** - RemoveRemoveFile Method Parameters

Parameter	Description
pRemoveFolder	Pass the <a href="#">ISWiRemoveFile</a> object that you want to remove.

## Example

The following Visual Basic code illustrates how you would set a property for a specific file removal entry in a component. For the purposes of this example, assume that the variable m\_oMyComp already has a reference to a component.

```
m_oMYComp.ISWiRemoveFiles("RemoveFile1").FileName = "*.txt"
```

## Applies To

- [ISWiComponent](#)

## RemoveComponentSubFolder Method

**Project** - This information applies to the following project types:

- *InstallScript*
- *InstallScript Object*

The RemoveComponentSubFolder method removes the specified component subfolder from the current component or component subfolder.

## Syntax

RemoveComponentSubFolder (pComponentSubFolder As ISWiComponentSubFolder) As Long

## Parameters

**Table 52** - RemoveComponentSubFolder Method Parameters

Parameter	Description
pComponentSubFolder	Pass the subfolder object that you want to remove.

## Example

The following Visual Basic lines demonstrate the RemoveComponentSubFolder method:

```

Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pComponent As ISWiComponent
Dim pComponentSubFolder As ISWiComponentSubFolder

Set pFeature = pProj.ISWiFeatures.Item("MyFeature")
Set pComponent = pFeature.ISWiComponents.Item("MyComp")
Set pComponentSubFolder = pComponent.ISWiComponentSubFolders.Item("MyCompSubFolder")
pComponent.RemoveComponentSubFolder pComponentSubFolder

pProj.SaveProject
pProj.CloseProject

```

## Applies To

- ISWiComponent
- ISWiComponentSubFolder

## RemoveDynamicFileLinking Method

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- Merge Module

Call RemoveDynamicFileLinking to remove a dynamic file link from the current component.

## Syntax

RemoveDynamicFileLinking (pSourceFolder As ISWiDynamicFileLinking) As Long

## Parameters

**Table 53** - RemoveDynamicFileLinking Method Parameters

Parameter	Description
<b>pSourceFolder</b>	Pass the ISWiDynamicFileLinking object to specify a dynamic file link that you want to remove from the project.

## Applies To

- ISWiComponent

## RemoveEnvironmentVar Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

Call RemoveEnvironmentVar to remove an environment from a specified component.

### Syntax

RemoveEnvironmentVar (sName As ISWiRemoveEnvironmentVar) As Long

### Parameters

**Table 54** ▪ RemoveEnvironmentVar Method Parameters

Parameter	Description
sName	Pass the ISWiEnvironmentVar object to specify an environment variable that you want to remove.

### Applies To

- ISWiComponent

## RemoveFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call RemoveFile to remove a file from a specified component.

## Syntax

RemoveFile (pFile As ISWiFile) As Long

## Parameters

**Table 55** ▪ RemoveFile Method Parameters

Parameter	Description
pFile	Pass the <a href="#">ISWiFile</a> object you want to remove.

## Applies To

- [ISWiComponent](#)

## RemoveRemoveFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

The RemoveRemoveFile method removes a file or folder removal entry from the current component. To remove a file or folder removal entry from the project, pass the ISWiRemoveFile object.

## Syntax

RemoveRemoveFile (pRemoveFolder As ISWiRemoveFile) As Long

## Parameters

**Table 56** ▪ RemoveRemoveFile Method Parameters

Parameter	Description
pRemoveFolder	Pass the <a href="#">ISWiRemoveFile</a> object that you want to remove.

## Applies To

- [ISWiComponent](#)

## ISWiComponentSubFolder Object

**Project** - This information applies to the following project types:

- *InstallScript*
- *InstallScript Object*

The ISWiComponentSubFolder object represents a component subfolder belonging to the current component or component subfolder. The component subfolder can be an existing one from the InstallShield user interface's Components view or one added by calling [AddComponentSubFolder](#).

Use the project's [ISWiComponentSubFolders](#) collection to access a specific component subfolder. You must specify either an index number or the component subfolder name for the Item property of ISWiComponentSubFolders.

### Members

**Table 57** - ISWiComponentSubFolder Object Members

Name	Type	Description
<a href="#">AddComponentSubFolder</a>	Method	Adds a subfolder to the component subfolder.
<a href="#">AddFile</a>	Method	Adds a file to the component subfolder.
<a href="#">DeleteFile</a>	Method	Deletes a file from the component subfolder.
<a href="#">ISWiComponentSubFolders</a>	Collection	Contains all of the subsubfolders associated with this component subfolders.
<a href="#">ISWiFiles</a>	Collection	Contains all of the files associated with this component subfolder.
<b>Name</b>	Read-Only Property	Stores the name of the component subfolder.
<a href="#">RemoveComponentSubFolder</a>	Method	Removes a subfolder from the component subfolder.

### Example

The following Visual Basic code illustrates the use of the ISWiComponentSubFolder object:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pComponent As ISWiComponent
Dim pComponentSubFolder As ISWiComponentSubFolder

Set pFeature = pProj.ISWiFeatures.Item("MyFeature")
Set pComponent = pFeature.ISWiComponents.Item("MyComp")
```

```
Set pComponentSubFolder = pComponent.ISWiComponentSubFolders.Item("MyCompSubFolder")
pComponentSubFolder.AddFile("C:\My Files\MyFile.ext")

pProj.SaveProject
pProj.CloseProject
```

Applies To

- ISWiComponent

DeleteFile Method

**Project** - This information applies to the following project types:

- InstallScript
- InstallScript Object

Call DeleteFile to delete a file from a specified component subfolder. The files added with this method have static file links, similar to adding files in the IDE.

Syntax

```
DeleteFile (pFile As ISWiFile) As Long
```

Parameters

Table 58 - DeleteFile Method Parameters

Parameter	Description
pFile	Pass the file object that you want to delete.

Example

The following Visual Basic example deletes a file from the component subfolder MyCompSubFolder:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pComponent As ISWiComponent
Dim pComponentSubFolder As ISWiComponentSubFolder
Dim pFile As ISWiFile

Set pFeature = pProj.ISWiFeatures.Item("MyFeature")
Set pComponent = pFeature.ISWiComponents.Item("MyComp")
Set pComponentSubFolder = pComponent.ISWiComponentSubFolders.Item("MyCompSubFolder")
Set pFile = pComponentSubFolder.ISWiFiles.Item("MyFile.ext")
pComponentSubFolder.DeleteFile pFile

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- [ISWiComponentSubFolder](#)

## ISWiCondition Object

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

ISWiCondition is a subset of the [ISWiFeature object](#). This object allows you to get and set **conditional logic** for any of your project's features.

## Members

**Table 59** ▪ ISWiCondition Object Members

Name	Type	Description
<b>Condition</b>	Read-Write Property	Gets or sets any conditions that are associated with this feature.
<b>Level</b>	Read-Write Property	Gets or sets the install level assigned to the feature when the condition evaluates to TRUE.

## Applies To

- [ISWiFeature](#)

## ISWiDynamicFileLinking Object

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *Merge Module*

*Project-specific differences are noted where appropriate.*

ISWiDynamicFileLinking represents a dynamic file link that belongs to a component. The dynamic file link can be an existing one from the InstallShield user interface or one added by calling [AddDynamicFileLinking](#).

## Members

**Table 60** • ISWiDynamicFileLinking Object Members

Name	Project	Type	Description
<b>CreateBestPracticeComponents</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>To use the best practice method of component creation for your dynamically linked files, set this property to True.</p> <p>To use the one-component-per-directory method of component creation, set this property to False.</p> <p>For detailed information about the two methods, see <a href="#">Determining the Appropriate Component Creation Method for Dynamically Linked Files</a>.</p>
<b>DynamicSubfolders</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Set this property to True to include all subfolders that are available in SourceFolder.
<b>ExcludeFiles</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Specify the file types that you want to exclude. Enter the file extension preceded by an asterisk (*). Separate multiple entries with a comma.
<b>IncludeFiles</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Specify the file types that you want to include. Enter the file extension preceded by an asterisk (*). Separate multiple entries with a comma.
<b>SelfRegister</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Set this property to True to self-register every file in the dynamically linked folder.</p> <p>If the <a href="#">Attrib64BitComponent property</a> of the component is set to True, the installation performs 64-bit self-registration on the target system. For more information, see <a href="#">Targeting 64-Bit Operating Systems</a>.</p>
<b>SourceFolder</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Specifies the fully qualified path to the folder whose contents should be dynamically linked.

## Applies To

- [ISWiComponent](#)

## ISWiEnvironmentVar Object

---

**Project** ▪ *This information applies to the following project types:*

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

ISWiEnvironmentVar represents an environment variable that belongs to a component. The file can be an existing one from the InstallShield user interface or one added by calling [AddEnvironmentVar](#).

## Members

**Table 61** • ISWiEnvironmentVar Object Members

Name	Type	Description
<b>EnvType</b>	Read-Write Property	<p>This enumerated integer property specifies whether the environment variable name refers to a system or user environment variable:</p> <ul style="list-style-type: none"> <li>● <b>evtSystem</b>—Creates, modifies, or removes the specified system environment variable.</li> <li>● <b>evtUser</b>—Creates, modifies, or removes the environment variable from the user's environment. The specified environment variable is available only to the end user who is logged on at the time of installation.</li> </ul>
<b>Key</b>	Read-Only Property	Stores the key of the Environment table.
<b>Name</b>	Read-Write Property	Retrieves or sets the name of the environment variable.
<b>OnInstall</b>	Read-Write Property	<p>This enumerated integer property retrieves or sets the action that you want to occur when the associated feature is installed to the target system:</p> <ul style="list-style-type: none"> <li>● <b>evoiSet</b>—In conjunction with the Placement property, sets the value of an existing environment variable. This option creates the environment variable if it does not already exist on the target system, and then it sets it during installation. If the environment variable exists on the target system, it is set during the installation.</li> <li>● <b>evoiCreate</b>—Creates the specified environment variable on the target system if it does not already exist, and it sets the variable's value.</li> <li>● <b>evoiRemove</b>—Removes the specified environment variable from the target system.</li> </ul>
<b>OnUninstall</b>	Read-Write Property	<p>This enumerated integer property specifies whether this environment variable should be removed from the target system when the associated feature is uninstalled:</p> <ul style="list-style-type: none"> <li>● <b>evouRemove</b>—Removes the environment variable or its appended value from the target system if the associated feature is uninstalled. If the value of the OnInstall property is Create, the Remove value for OnUninstall removes the entire environment variable. If the value of the OnInstall property is Set, the Remove value for OnUninstall removes only the value that was appended to the variable's value.</li> <li>● <b>evouLeave</b>—Leaves the environment variable or its appended value on the target system if the associated feature is uninstalled.</li> </ul>

**Table 61** • ISWiEnvironmentVar Object Members (cont.)

Name	Type	Description
<b>Placement</b>	Read-Write Property	<p>This enumerated integer property retrieves or sets the placement of the value in the Value field relative to the specified environment variable's existing value:</p> <ul style="list-style-type: none"> <li>● <b>evpAppend</b>—Appends the value indicated in the Value property to the end of the specified environment variable's existing value.</li> <li>● <b>evpPrefix</b>—Adds the value indicated in the Value property to the beginning of the specified environment variable's existing value.</li> <li>● <b>evpReplace</b>—Replaces the value of the specified environment variable with the value indicated in the Value property.</li> </ul>
<b>Value</b>	Read-Write Property	Retrieves or sets the path or value for this environment variable.

### Applies To

- ISWiComponent

## ISWiFeature Object

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI

*Project-specific differences are noted where appropriate.*

ISWiFeature represents a top-level feature or a subfeature in InstallShield. You can retrieve a feature by specifying an item in the **ISWiFeatures** collection.

Many feature properties and attributes are available in the automation interface through this object's methods, properties, and collections. Refer to the following table to see which methods, properties, and collections are available for your project type.

## Members

**Table 62** • ISWiFeature Object Members

Name	Project	Type	Description
<b>AddCondition</b>	Basic MSI, InstallScript MSI	Method	Adds a condition to the current ISWiFeature.
<b>AddFeature</b>	Basic MSI, InstallScript, InstallScript MSI	Method	Creates an ISWiFeature object as a subfeature of the current ISWiFeature.
<b>AddMergeModule</b>	Basic MSI, InstallScript MSI	Method	Associates a merge module with the current feature.
<b>AddObject</b>	InstallScript	Method	Adds an InstallScript object to the current ISWiFeature.
<b>Advertise</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets the Advertisement property for the current feature. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>eaAllow (1)</b>—Use this option to enable advertisement on this feature. Although advertisement is allowed, it is not the default option when the setup is run.</li> <li>● <b>eaFavor (2)</b>—Use this option to have the feature advertised by default. Your end users can always change the advertisement option for a feature in Custom Setup dialog.</li> <li>● <b>eaDisallow (3)</b>—Use this option if you do not want to allow advertising for this feature. Your end users will not be able to choose to have a feature advertised in the Custom Setup dialog.</li> <li>● <b>eaDisableIfNotSupported (4)</b>—Advertisement only works on systems with Internet Explorer 4.01 or higher. If the target system does not meet this criteria, advertising is turned off. If the target system can support advertisement, advertising is allowed.</li> </ul>
<b>AttachComponent</b>	Basic MSI, InstallScript, InstallScript MSI	Method	Associates a component with the current feature.

**Table 62** ■ ISWiFeature Object Members (cont.)

Name	Project	Type	Description
<b>CDRomFolder</b>	InstallScript	Read-Write Property	Gets or sets the feature's CD-ROM Folder property, which specifies the folder in the disk image in which the feature is placed if the feature's check box is checked in the Release wizard's Custom Media Layout panel.
<b>Comments</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the comments associated with this feature.
<b>DeleteCondition</b>	Basic MSI, InstallScript MSI	Method	Deletes a condition associated with the current feature.
<b>Description</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the description for this feature.
<b>DescriptionID</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Gets or sets the string identifier for this feature's description.</p>  <p><b>Note</b> ■ To set this property, the string entry must exist and you must know the string identifier.</p>
<b>Destination</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets the default destination of this feature.
<b>Display</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets the Display property for this feature. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>edtVisibleAndCollapsed (0)</b>—Means that the feature is displayed in the Custom Setup dialog with its subfeatures collapsed by default.</li> <li>● <b>edtVisibleAndExpanded (1)</b>—Means that the feature is displayed in the Custom Setup dialog with its subfeatures expanded by default.</li> <li>● <b>edtNotVisible (2)</b>—Means that the feature is not displayed to the end user in the Custom Setup dialog.</li> </ul>

Table 62 ■ ISWiFeature Object Members (cont.)

Name	Project	Type	Description
<b>DisplayName</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the display name of this feature.
<b>DisplayNameID</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the string identifier for this feature's display name.   <b>Note</b> ■ To set this property, the string entry must exist and you must know the string identifier.
<b>Encryption</b>	InstallScript	Read-Write Property	Gets or sets the feature's Encryption property, which specifies whether the files for the feature will be encrypted by the release builder. This property is a Boolean.
<b>Features</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Only Property	This property contains an <b>ISWiFeatures</b> collection of all this feature's immediate subfeatures, if any.
<b>FTPLocation</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's FTP Location property, which specifies an FTP location for the feature.
<b>HTTPLocation</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's HTTP Location property, which specifies an HTTP location for the feature.
<b>IncludeInBuild</b>	InstallScript	Read-Write Property	Gets or sets the feature's Include In Build property, which specifies whether the feature should be included in your distribution media. This property is a Boolean.
<b>GUID</b>	InstallScript	Read-Write Property	Gets or sets the feature's GUID property, which identifies the feature in the setup's log file; if you change a feature's GUID in an update setup, the setup engine treats it as a new feature rather than an update to an existing feature.
<b>InstallLevel</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets the install level of this feature.

**Table 62** • ISWiFeature Object Members (cont.)

Name	Project	Type	Description
<b>ISWiComponents</b>	Basic MSI, InstallScript, InstallScript MSI	Collection	Contains all of the components associated with the current feature.
<b>ISWiConditions</b>	Basic MSI, InstallScript MSI	Collection	Contains all of the conditions associated with the current feature.
<b>ISWiObjects</b>	InstallScript	Collection	Contains all of the InstallScript objects associated with the current feature.
<b>Miscellaneous</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's Miscellaneous property, which associates a text string with the feature.
<b>Name</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Only Property	Feature name of the current element in the collection.
<b>Need</b>	InstallScript	Read-Write Property	Gets or sets the feature's File Need property, which specifies whether a warning, a severe warning, or no warning should be given to end users who deselect the feature. Use the following constants to set this property: <ul style="list-style-type: none"> <li>● <b>efnCritical (0)</b>—Use this option for features that your setup does not allow end users to deselect.</li> <li>● <b>efnHighlyRecommended (1)</b>—Use this option to advise end users that the feature should be installed.</li> <li>● <b>efnStandard (2)</b>—Use this option to let end users deselect the feature with no message issued.</li> </ul>
<b>OnInstalled</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's OnInstalled property, which specifies the function to be executed just after the feature is installed.
<b>OnInstalling</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's OnInstalling property, which specifies the function to be executed just before the feature is installed.
<b>OnUninstalled</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's OnUninstalled property, which specifies the function to be executed just after the feature is uninstalled.

Table 62 • ISWiFeature Object Members (cont.)

Name	Project	Type	Description
<b>OnUninstalling</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets the feature's OnUninstalling property, which specifies the function to be executed just before the feature is uninstalled.
<b>Password</b>	InstallScript	Read-Write Property	Gets or sets the feature's Password property, which specifies a password for the feature.
<b>ReleaseFlags</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets the release flags that are associated with this feature. Separate multiple flags with a comma.</p> <p>You can specify which release flags you want to use to filter the project's features in the ReleaseFlags property of <a href="#">ISWiRelease</a>.</p>
<b>RemoteInstallation</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Retrieves or sets the feature's Remote Installation property. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>efrLocal (0)</b>—Means that all of the feature's files are installed onto the target system.</li> <li>● <b>efrSource (1)</b>—Causes the files belonging to this feature to run directly from the source medium, such as a CD-ROM or network server.</li> <li>● <b>efrFollowParent (2)</b>—Gives a subfeature the Remote Installation property of its parent feature.</li> </ul>
<b>RemoveComponent</b>	Basic MSI, InstallScript, InstallScript MSI	Method	Removes a component from this feature.
<b>RemoveFeature</b>	Basic MSI, InstallScript, InstallScript MSI	Method	Deletes the specified feature from the project.
<b>RemoveMergeModule</b>	Basic MSI, InstallScript MSI	Method	Removes a merge module from the current feature.
<b>RemoveObject</b>	InstallScript	Method	Removes an InstallScript object from the current ISWiFeature.
<b>Required</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets the feature's Required property. This property is a Boolean.

**Table 62** ■ ISWiFeature Object Members (cont.)

Name	Project	Type	Description
<b>RequiredFeatures</b>	InstallScript, InstallScript MSI	Read-Write Property	Gets or sets a comma-delimited string that lists the names of the features that are specified in the current feature's Required Features property.
<b>SetupTypeStatus</b>	InstallScript, InstallScript MSI	Read-Write Property	<p>Gets or sets the selection status of the feature in the setup type that is specified in the property's argument. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>estSelected (10)</b>—The feature is selected.</li> <li>● <b>estDeselected (11)</b>—The feature is not selected.</li> </ul> <p>In the following Visual Basic code snippet, the Help_Files feature is not selected for the Compact setup type.</p> <pre>Set pFeature = pProject.ISWiFeatures.Item("Help_Files") Set pSetupType = pProject.ISWiSetupTypes.Item("Compact") pFeature.SetupTypeStatus(pSetupType) = 11</pre>
<b>StatusText</b>	InstallScript	Read-Write Property	Gets or sets the feature's Status Text property, which specifies the text that end users see in the uppermost line of the progress indicator during the transfer of this feature.
<b>Visible</b>	InstallScript	Read-Write Property	Gets or sets the feature's Visible property, which specifies whether the feature will be visible in feature dialog boxes during the installation. This property is a Boolean.

### Applies To

- ISWiProject

## AddCondition Method

**Project** ■ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the AddCondition method to add a condition to the current feature.

## Syntax

AddCondition (sKey As String) As ISWiCondition

## Parameters

**Table 63** ▪ AddCondition Method Parameters

Parameter	Description
<b>sKey</b>	Pass the string version of the condition you want to attach to the current feature.

## Applies To

- ISWiFeature

## AddMergeModule Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the AddMergeModule method to associate a merge module with the current feature. This method is similar to adding a merge module to a feature in the Redistributables view.

## Syntax

AddMergeModule (FileName As String)

## Parameters

**Table 64** ▪ AddMergeModule Method Parameters

Parameter	Description
<b>FileName</b>	Pass the fully qualified file name for the merge module (.msm) file that you want to associate with this feature.

## Applies To

- ISWiFeature

## AddObject Method

**Project** ▪ This information applies to InstallScript projects.

The AddObject method adds an InstallScript object with the specified moniker to the current feature.

## Syntax

```
AddObject (Moniker As String) As ISWiObject
```

## Parameters

**Table 65** • AddObject Method Parameters

Parameter	Description
<b>Moniker</b>	Pass the moniker for the InstallScript object that you want to add. To get an InstallScript object's moniker, create a new Professional project in the IDE and add the InstallScript object to a feature, then go to the Direct Editor view's ISFeatureExtended table and see the Moniker column.

## Example

The following Visual Basic lines demonstrate the AddObject method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pObj As ISWiObject

Set pFeature = pProj.ISWiFeatures.Item(2)
Set pObj = pFeature.AddObject ("@ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9")

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- ISWiFeature

## AttachComponent Method

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI

Call the AttachComponent method to associate a component with the current feature. The component must exist (created manually in the IDE or by calling [AddComponent](#)) before you can associate it with a feature.

## Syntax

AttachComponent (Component As ISWiComponent)

## Parameters

**Table 66** ▪ AttachComponent Method Parameters

Parameter	Description
<b>Component</b>	Provide the <b>ISWiComponent</b> object that represents the component you want to associate with this feature.

## Applies To

- **ISWiFeature**

## DeleteCondition Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the DeleteCondition method to delete a condition from the current feature.

## Syntax

DeleteCondition (pCondition As ISWiCondition)

## Parameters

**Table 67** ▪ DeleteCondition Method Parameters

Parameter	Description
<b>pCondition</b>	The <b>ISWiCondition</b> object representing the condition you want to delete.

## Applies To

- **ISWiFeature**

## RemoveComponent Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*

- *InstallScript*
- *InstallScript MSI*

Call `RemoveComponent` to remove a component from a specified feature. Similar to removing a component in the Setup Design views, `RemoveComponent` disassociates a component from its feature, but it does not permanently delete it from the project.

## Syntax

```
RemoveComponent (pComponent As ISWiComponent) As Boolean
```

## Parameters

**Table 68** ▪ RemoveComponent Method Parameters

Parameter	Description
<b>pComponent</b>	Enter the <a href="#">ISWiComponent</a> object that you want to remove.

## Applies To

- [ISWiFeature](#)

## RemoveMergeModule Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the `RemoveMergeModule` method to remove a merge module from only the current feature. (To delete a merge module from the project, call the [DeleteMergeModule](#) method.)

## Syntax

```
RemoveMergeModule (FileName As String)
```

## Parameters

**Table 69** ▪ RemoveMergeModule Method Parameters

Parameter	Description
<b>FileName</b>	Pass the fully qualified file name for the merge module (.msm) file that you want to remove from this feature.

## Applies To

- [ISWiFeature](#)

## RemoveObject Method

**Project** ▪ This information applies to InstallScript projects.

The RemoveObject method removes the specified **InstallScript object** from the current feature.

### Syntax

RemoveObject (Object As ISWiObject) As Long

### Parameters

**Table 70** ▪ RemoveObject Method Parameters

Parameter	Description
<b>Object</b>	The InstallScript object to be deleted.

### Example

The following Visual Basic lines demonstrate the RemoveObject method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pObject As ISWiObject

Set pFeature = pProj.ISWiFeatures.Item("Help_Files")
Set pObject = pFeature.ISWiObjects.Item(1)
pFeature.RemoveObject pObject

pProj.SaveProject
pProj.CloseProject
```

### Applies To

- **ISWiFeature**

## ISWiFile Object

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

*Project-specific differences are noted where appropriate.*

ISWiFile represents a file belonging to a component or, in InstallScript projects, a component subfolder in your project. The file can be an existing one from the InstallShield user interface or one added by calling [AddFile](#).

Many feature properties and attributes are available in the automation interface through this object's methods, properties, and collections. Note that some methods, properties, and collections are available for specific project types.

Use the component's [ISWiFiles](#) collection to access a specific file. You must specify either an index number or the file key for the Item property of ISWiFiles. The file key is visible in the File column of the File table in the Director Editor view of InstallShield. In Basic MSI and InstallScript MSI projects, it is also listed under the Key column in a component's file list.

Unfortunately, you might not know the file key, or it might have been reassigned if the files are dynamically linked to the component. Instead of using the file key, you could write code similar to the following example to check for a certain file name:

```
Dim m_pFile As ISWiFile

For Each m_pFile In m_pComponent.ISWiFiles
    If UCase(m_pFile.DisplayName) = "MYFILE.EXE" Then
        Exit For
    End If
Next
```

If the file name MyFile.exe is found among the component's files, the For loop ends, and m\_pFile holds a copy of the ISWiFile object for MyFile.exe.

## Members

**Table 71** • ISWiFile Object Members

Name	Project	Type	Description
<b>Always Overwrite</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>If you want Windows Installer to ignore the actual version number of the selected file, and instead always try to overwrite the file if it is already present on the target system, select this check box. At run time, if this file has the same name and target location as one on the target system, Windows Installer considers the version of the file in your installation to be 65535.0.0.0 when it is determining whether to update the target system's file with the version in your current installation, or to leave the file as is.</p> <p>For more details about how Windows Installer determines whether to overwrite an existing file, see <a href="#">Overwriting Files and Components on the Target System</a>.</p> <p>The maximum version number for a file is 65535.65535.65535.65535.</p>
<b>Attributes</b>	Basic MSI, InstallScript MSI	Property (Deprecated)	This property is no longer supported. Use the Hidden, ReadOnly, System, and Vital properties instead.
<b>CompanionFile</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	Reserved for future use.
<b>DisplayName</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>The standard name of the file. Be sure that case of this entry matches the case of the file name if you plan on distributing your package via the Internet, since some Web servers are case-sensitive. The name cannot contain any characters that are not valid for Windows folders and file names.</p> <p>If the file has both a long and a short file name (see ShortName, below), only the long name is used in the display name.</p> <p>You cannot modify this property if the files are dynamically linked.</p>

**Table 71** ■ ISWiFile Object Members (cont.)

Name	Project	Type	Description
<b>DynamicFile</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, Merge Module	Read-Only Property	This property is True if the file's source is linked to the component dynamically, or False if it is linked statically.
<b>FontTitle</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	Retrieves or sets the Font Title file attribute as a string.  You cannot modify this property if the files are dynamically linked.
<b>FullPath</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	Stores the fully qualified path (including the file name) of the file's source location. Any path variables are resolved to the actual path.  You cannot modify this property if the files are dynamically linked.
<b>Hidden</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	True if a file has the Hidden attribute set.  This property is ignored if OverrideSystemAttributes is set to False.  You cannot modify this property if the files are dynamically linked.
<b>Languages</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	This property should contain a string of all of the file's language IDs, in decimal and separated by commas. The following line identifies the file as English and German:  <code>m_pFile.Languages = "1031,1033"</code>  This property is ignored if OverrideSystemLanguage is set to True.  You cannot modify this property if the files are dynamically linked.
<b>Modified</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	Retrieves the file's Modified file attribute. Reserved for future use.
<b>Name</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	Retrieves or sets a file key. See the description of ISWiFile above for more information about the file key.  You cannot modify this property if the files are dynamically linked.

**Table 71** ■ ISWiFile Object Members (cont.)

Name	Project	Type	Description
<b>OverrideSystemAttributes</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>To override the development system's settings for all of the file attributes, such as Hidden, ReadOnly, Vital, and System, set this property to True.</p> <p>If you set this property to False, the Hidden, ReadOnly, Vital, and System properties are ignored.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>OverrideSystemLanguage</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>To override the language of the file on the development system, set this property to True.</p> <p>If you set this property to False, the Languages property is ignored.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>OverrideSystemSize</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>To override the size of the file on the development system, set this property to True.</p> <p>If you set this property to False, the Size property is ignored.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>OverrideSystemVersion</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>To override the version of the file version on the development system, set this property to True.</p> <p>If you set this property to False, the Version property is ignored.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>ReadOnly</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Retrieves or sets the Read-only file attribute. Set this property to True to mark a file as read-only. Leave it undefined or set it to False to mark a file as read-write.</p> <p>This property is ignored if OverrideSystemAttributes is set to False.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>SelfRegister</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets the Self-Register file attribute. Set this property to True to mark a file as self-registering.</p> <p>You cannot modify this property if the files are dynamically linked.</p>

**Table 71** ■ ISWiFile Object Members (cont.)

Name	Project	Type	Description
<b>ShortName</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Gets or sets the file's short name. Your files must have corresponding short names in case the Windows Installer property SHORTFILENAME is set because the distribution medium cannot handle long file names.</p> <p>Only the short file names are used when you deselect “Use long file names” in the Advanced Settings panel of the Release wizard.</p> <p>By default, the build process will generate short names for your files, and therefore reading the current value of a file's ShortName property will return an empty string. However, if you explicitly set a file's ShortName property, the build process will use the short name you specify, and reading the ShortName value will return the short name you specified.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>Size</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>Contains the size of the file, in bytes, as a Long.</p> <p>If you are setting this property, OverrideSystemSize must first be set to True. Otherwise, InstallShield uses the actual size of the file.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>System</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>Retrieves or sets the System file attribute. Set this property to True if the file is a system file.</p> <p>This property is ignored if OverrideSystemAttributes is set to False.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>UseSystemSettings</b>	Basic MSI, InstallScript MSI	Property (Obsolete)	<p>This property is no longer supported. Use the OverrideSystemAttributes, OverrideSystemSize, OverrideSystemVersion, and OverrideSystemLanguage properties instead.</p>

**Table 71** • ISWiFile Object Members (cont.)

Name	Project	Type	Description
<b>Version</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>Set this property to the version of the file that you are including in the setup.</p> <p>To specify a companion file, this property can also be set to the Name property of another ISWiFile object, provided. To learn more about companion files, see <a href="#">Companion Files</a>.</p> <p>This property is ignored if OverrideSystemVersion is set to False.</p> <p>You cannot modify this property if the files are dynamically linked.</p>
<b>Vital</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Read-Write Property	<p>Retrieves or sets the Vital file attribute. Set this property to True to mark this file as vital.</p> <p>You cannot modify this property if the files are dynamically linked.</p>

## ISWiFolder Object

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

ISWiFolder represents a program folder in a component's Shortcuts explorer in the InstallShield user interface. You can retrieve a folder by specifying an item in the [ISWiFolders](#) collection.

Many folder attributes are available in the automation interface through this object's methods and properties. Refer to the following table to learn which methods, properties, and collections are available for your project type.

## Members

**Table 72** ▪ ISWiFolder Object Members

Name	Type	Description
<b>AddShortcut</b>	Method	Adds a shortcut object to the current folder object.
<b>AddSubFolder</b>	Method	Creates another program folder under the current one.
<b>DeleteShortcut</b>	Method	Deletes the specified shortcut from the current folder object.
<b>DeleteSubFolder</b>	Method	Deletes the specified subfolder from the current one.
<b>Description</b>	Read-Write Property	Contains any descriptive text you have entered for the folder.
<b>DisplayName</b>	Read-Write Property	Retrieves or sets the name displayed for a folder.
<b>ISWiShortcuts</b>	Collection	Contains every shortcut under the current program folder.
<b>Name</b>	Read-Write Property	Retrieves the key name of the folder. This is the name that is displayed in the Shortcuts view in the InstallShield user interface. It is not the same as the DisplayName property.
<b>SharedFolder</b>	Read-Write Property	This Boolean property retrieves or sets the Shared property of the folder, which specifies whether the folder is always removed from the system (False) or is removed only if it has no subfolders or files that were not created by the setup (True).
<b>SubFolders</b>	Collection	Contains an ISWiFolders collection of each program folder directly under the current folder as laid out in the Shortcuts explorer. See <a href="#">ISWiFolders Collection</a> for an example of using this property to retrieve a subfolder.
 <p><b>Note</b> ▪ This property does not apply to InstallScript projects.</p>		

## Applies To

- [ISWiComponent](#)

## AddShortcut Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*

- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *Merge Module*

Call AddShortcut to create a shortcut under the current program folder.

## Syntax

AddShortcut (Name As String) As ISWiShortcut

## Parameters

**Table 73** • AddShortcut Method Parameters

Parameter	Description
<b>Name</b>	Enter the name you want to give the shortcut in the Shortcuts explorer.

## Applies To

- *ISWiFolder*

## AddSubFolder Method

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

Call the AddSubFolder method to create a program folder directly under the current *ISWiFolder* object.

## Syntax

AddSubFolder (Name As String) As ISWiFolder

## Parameters

**Table 74** ▪ AddSubFolder Method Parameters

Parameter	Description
<b>Name</b>	Enter the name you want to give the program folder in the Shortcuts explorer.

## Applies To

- ISWiFolder

## DeleteShortcut Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- Merge Module

Call DeleteShortcut to create a shortcut from the current folder.

## Syntax

DeleteShortcut (pShortcut As ISWiShortcut) As Long

## Parameters

**Table 75** ▪ DeleteShortcut Method Parameters

Parameter	Description
<b>pShortcut</b>	Pass the <a href="#">ISWiShortcut Object</a> to specify a shortcut that you want to delete from a folder.

## Examples

```
Set pShortcut = pFolder.ISWiShortcuts("MyShortcut")
If Not pShortcut Is Nothing Then
    pFolder.DeleteShortcut pShortcut
Next
```

## Applies To

- ISWiFolder

## DeleteSubFolder Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the DeleteSubFolder method to delete the specified subfolder from the current ISWiFolder object.

## Syntax

DeleteSubFolder (pSubFolder As ISWiFolder) As Long

## Parameters

**Table 76** ▪ DeleteSubFolder Method Parameters

Parameter	Description
<b>Name</b>	Pass the ISWiFolder Object to specify a subfolder that you want to delete from a folder.

## Example

```
Set pSubFolder = pFolder.SubFolders("MySubFolder")
If Not pSubFolder Is Nothing Then
    pFolder.DeleteSubFolder pSubFolder
Next
```

## Applies To

- ISWiFolder

## ISWiLanguage Object

**Edition** ▪ Support for multilanguage installations is available with InstallShield Premier Edition.

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

ISWiLanguage represents a language whose string entries are included in the current project.

To include or exclude languages, use the `IsIncluded` property on each relevant ISWiLanguage object.

## Members

**Table 77** ▪ ISWiLanguage Object Members

Name	Type	Description
<b>AddStringEntry</b>	Method	Adds a new string entry to a language.
<b>DeleteStringEntry</b>	Method	Removes a string entry from the project.
<b>Id</b>	Read-Only Property	Stores the language identifier of the current language.
<b>IsIncluded</b>	Read-Write Property	Includes or excludes a language, or checks its current status.
<b>ISWiStringEntries</b>	Collection	Contains all of the string entries in the current language.
<b>Name</b>	Read-Only Property	Gets the name of the current language.

## Applies To

- ISWiProject

## AddStringEntry Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object

- *Merge Module*

Call `AddStringEntry` to add a new string entry to a language and return `ISWiStringEntry`.

## Syntax

`AddStringEntry (sLangId) As ISWiStringEntry`

## Parameter

**Table 78** • AddStringEntry Method Parameter

Parameter	Description
<b>sLangId</b>	Specify the identifier of the language that should contain the string entry.

## Applies To

- *ISWiLanguage*

## DeleteStringEntry Method

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

Call `DeleteStringEntry` to delete a string entry from a language.

## Syntax

`DeleteStringEntry (pLangId As ISWiStringEntry)`

## Parameter

**Table 79** • DeleteStringEntry Method Parameter

Parameter	Description
<b>pLangId</b>	Specify the <code>ISWiStringEntry</code> object to specify a string entry that you want to remove from the project.

## Applies To

- *ISWiLanguage*

## ISWiLatestSetup Object

---

**Project** - This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Indicates the Latest Setup (or UpgradedImage) item for a patch configuration where you specify settings for the latest version of your installation.

Each patch configuration must contain at least one latest setup and one previous setup in order for you to create a patch. You can have multiple previous setups per latest setup.

Every application or setup that you intend to patch to a latest setup must be added to the previous setup node.

For example, your company supports versions 1.0 and 1.1 of an application, and you want to upgrade both of these applications to version 2.0. To create a single patch to upgrade both versions, you would add V1.0 and V1.1 as previous setups to the latest setup. Your latest setup would contain V2.0.

## Members

**Table 80** • ISWiLatestSetup Object Members

Name	Type	Description
<b>AddPatchExternalFile</b>	Method	<p>Adds a <b>ISWiPatchExternalFile</b> object to the current latest setup configuration.</p> <p>Patching an additional external file provides the ability to create a binary file patch against versions of an application file that have not been shipped as part of the previous setup. For example, if one of your application files was potentially updated by another setup, you should reference that file version to ensure that the file level patch can be successfully applied at runtime.</p>
<b>AddPatchWholeFile</b>	Method	<p>Adds a <b>ISWiPatchWholeFile</b> object to the current latest setup configuration.</p> <p>To include all of your files as whole files, set the IncludeWholeFilesOnly property of patch configuration to True.</p>
<b>AddPreviousSetup</b>	Method	Adds a <b>ISWiPreviousSetup</b> object to the current latest setup configuration.
<b>DeletePatchExternalFile</b>	Method	Deletes specified external file object from the current latest setup configuration.
<b>DeletePatchWholeFile</b>	Method	Deletes specified whole file object from the current latest setup configuration.
<b>DeletePreviousSetup</b>	Method	Deletes specified previous setup object from the current latest setup configuration.
<b>ISWiPatchExternalFiles</b>	Collection	Contains all of the external file objects belonging to this latest setup.
<b>ISWiPatchWholeFiles</b>	Collection	Contains all of the whole file objects belonging to this latest setup.
<b>ISWiPreviousSetups</b>	Collection	Contains all of the previous setups belonging to this latest setup (or upgraded image).
<b>MsiPath</b>	Read-Only Property	<p>Gets or Sets the latest setup path. The latest setup should be the latest version of your installation for which you want to create a patch. The default setting, &lt;ISLatestRelease&gt;, resolves to the last full release that you build.</p> <p>The release path that you specify in this property should be an uncompressed release, ideally created with an administrative installation if the previous product versions were compressed.</p>

**Table 80** ▪ ISWiLatestSetup Object Members (cont.)

Name	Type	Description
<b>Name</b>	Read-Only Property	Gets name of the latest setup item.

## Applies To

- [ISWiPatchConfig](#)

## AddPreviousSetup Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the AddPreviousSetup method to add previous setup item to the latest setup item. Using this method is similar to adding a previous setup item with the Patch Design View of the IDE. You can set the properties of the new previous setup with the ISWiPreviousSetup object.

## Syntax

```
AddPreviousSetup(PreviousSetupName As String) As ISWiPreviousSetup
```

## Parameter

**Table 81** ▪ AddPreviousSetup Method Parameter

Parameter	Description
<b>PreviousSetup Name</b>	Holds the name of previous setup item.

## Applies To

- [ISWiLatestSetup](#)

## DeletePreviousSetup Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the DeletePreviousSetup method to remove specified previous setup object from the latest setup configuration.

## Syntax

```
DeletePreviousSetup (PreviousSetup As ISWiPreviousSetup) As Long
```

## Parameter

**Table 82** ▪ DeletePreviousSetup Method Parameter

Parameter	Description
<b>PreviousSetup</b>	Holds the previous setup item object to be deleted.

## Applies To

- ISWiLatestSetup

# ISWiMsiPatchSequence Object

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Contains all the information that the installer requires to determine the sequence of application of a small update patch relative to all other patches.

## Members

**Table 83** • ISWiMsiPatchSequence Object Members

Name	Type	Description
<b>FamilyName</b>	Read-Write Property	<p>Gets the patch family name. Patches in the same patch family that target the same product version are sorted by the values in the Sequence column. The patches within the patch family are applied to the target product in the order of increasing sequence. The PatchFamily is also used to determine which patches are to be superseded. A patch may be listed in multiple rows and belong to multiple patch families if it applies to more than one product or includes multiple fixes.</p> <p>The Windows Installer does not interpret the PatchFamily value in any way other than comparisons for equality against other PatchFamily values. A PatchFamily value must be unique within the ProductCode targeted by the set of patches. In the complex patching scenarios the PatchFamily identifier may need to be globally unique.</p>
<b>Sequence</b>	Read-Write Property	<p>Gets or Sets the sequence of this patch within the specified PatchFamily. The value in Sequence is expressed in the format of Version data. The value contains between 1 and 4 fields and each field has a range of 0 to 65535. Members of PatchFamily are sorted and applied to the target product in the order of increasing Sequence values. For example, the following six values are increasing: 1, 1.1, 1.2, 2.01, 2.01.1, 2.01.1.1.</p>
<b>Supersede</b>	Read-Write Property	<p>Set this Boolean property to True to indicate that the small update patch supersedes the updates provided by all patches with lesser Sequence values in the same PatchFamily.</p>
<b>Target</b>	Read-Write Property	<p>Gets or Sets target product code. A value in this property is optional. If a product code GUID is set in this property and the patch is being applied to the specified product, the patch is sorted and applied as a member of the specified PatchFamily. If a product code GUID is set in this field and the patch is not being applied to the product specified by ProductCode, this row is ignored. If the value in ProductCode is NULL, the patch is sorted and applied as a member of PatchFamily for all targets of the patch regardless of the product code.</p> <p>A patch can have multiple rows in the same PatchFamily and a different ProductCode for each product targeted by the patch. One row for the PatchFamily can specify NULL for ProductCode. If the target product matches a row with a non-NULL ProductCode, the installer uses the matching row and ignores the row with the NULL ProductCode. If none of the specified product codes match the target, the patch is sorted and applied as a member of PatchFamily for all targets of the patch regardless of the product code.</p>

## Applies To

- [ISWiProject](#)

## ISWiObject Object

**Project** ▪ This information applies to the following project types:

- *InstallScript*
- *InstallScript Object*

The ISWiObject object represents an InstallScript object belonging to your project. The InstallScript object can be an existing one from the InstallShield user interface's Objects view or one added by calling [AddObject](#).

Use the project's [ISWiObjects](#) collection to access a specific InstallScript object. You must specify either an index number or the moniker for the Item property of ISWiObjects. The moniker is visible in the IDE only as the Moniker in the Direct Editor view's ISFeatureExtended table.

### Members

None.

### Example

The following Visual Basic code illustrates the use of the ISWiObject:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pObject As ISWiObject

Set pFeature = pProj.ISWiFeatures.Item(2)
Set pObject = pFeature.ISWiObjects.Item("@ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9")
pFeature.RemoveObject pObject

pProj.SaveProject
pProj.CloseProject
```

### Applies To

- [ISWiFeature](#)

## ISWiPatchConfig Object

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

ISWiPatchConfig represents a patch configuration in the Patch Design view of the InstallShield user interface. You can retrieve a configuration by specifying an item in the ISWiPatchConfigs collection.

## Build Status Events

The ISWiPatchConfig object raises the following status events:

- Public Event ProgressIncrement(ByVal lIncrement As Long, pbCancel As Boolean)
- Public Event ProgressMax(ByVal lMax As Long, pbCancel As Boolean)
- Public Event StatusMessage(ByVal sMessage As String, pbCancel As Boolean)

These events are raised during the patch build process and provide status updates. You can set pbCancel to stop the build. For sample code that demonstrates how to use these events, see [Using Build Status Events](#).

Many feature properties and attributes are available in the automation interface through this object's methods, properties, and collections. The following table lists the ISWiPatchConfig object members.

Name	Type	Description
<b>AddLatestSetup</b>	Method	Adds a <b>ISWiLatestSetup</b> object to the current patch configuration.
<b>AddMsiPatchSequence</b>	Method	Adds a <b>ISWiMsiPatchSequences</b> object to the current patch configuration
<b>AllowProductCodeMismatches</b>	Read-Write Property	Set this property to True if you want the patch creation executable to suppress build-time prompts if product codes differ between the original and latest installations. For a major upgrade, be sure to set True.
<b>AllowProductVersionMajorMismatches</b>	Read-Write Property	Set this property to True if you want the patch creation executable to suppress build-time prompts if product versions differ between the original and latest installations.
<b>AllowRemoval</b>	Read-Write Property	Set this property to True if you would like the patch to be uninstallable without having to uninstall and reinstall the entire application and other patches.  For more information, see <a href="#">Removing Patches</a> in the Windows Installer help.
<b>BuildPatch</b>	Method	Calling this method builds the current patch configuration. This action has the same effect as right-clicking on a patch configuration in the Patch Design view and then selecting 'Build Patch'.
<b>Classification</b>	Read-Write Property	Gets or sets the category of upgrade. Examples include Critical Update, Hotfix, and Service Pack.
<b>CreateUpdateLauncher</b>	Read-Write Property	Set this property to True if you want to create an Update.exe update launcher for the current patch.

Name	Type	Description
<b>DeleteLatestSetup</b>	Method	Deletes specified latest setup object from the current patch configuration.
<b>DeleteMsiPatchSequence</b>	Method	Deletes specified patch sequence object from the current patch configuration.
<b>Description</b>	Read-Write Property	Gets or sets the brief description of your patch.
<b>DisableDefaultSequencing</b>	Read-Write Property	<p>Set this property to False if you want to use the default sequencing for the patches of your product. This default sequence accounts for obsolete patches, superseded patches, and patches that have already been applied to the product.</p> <p>If you set this property to True, you can add your own custom sequence. If set True but do not add a sequence, no sequencing information is built into your patch.</p>
<b>DisplayName</b>	Read-Write Property	Gets or sets the name of your patch
<b>EnablePatchCache</b>	Read-Write Property	When you set this property to True, InstallShield creates intermediate files that are used in subsequent builds to improve performance speed. These intermediate files are left indefinitely on your system. Do not select this check box if you have limited disk space.
<b>GenerateMsiPatchOldAssembly</b>	Read-Write Property	Set this property to True to automatically generate entries for the MsiPatchOldAssemblyFile and MsiPatchOldAssemblyName tables, which allow a patch package that is running under Windows Installer 3.0 or later to patch an assembly in the global assembly cache (GAC) without making a run-time request for the original installation source.
<b>GeneratePatchGuid</b>	Read-Write Property	Set this property to True if you want a new GUID generated each time that you build your patch. If you select No, the GUID listed for the Patch GUID property is used. The default setting is True.
<b>IncludeWholeFilesOnly</b>	Read-Write Property	Set this property to True to include whole files for every file included in the patch package.
<b>ISWiLatestSetups</b>	Collection	Contains all of the latest setups belonging to this patch configuration

Name	Type	Description
<b>ISWiMsiPatchSequences</b>	Collection	Contains all of the patch sequences belonging to this patch configuration.
<b>LauncherCompanyName</b>	Read-Write Property	<p>Gets or sets the company name. This will override the default company name for Update.exe with your company name.</p> <p>The company name is displayed on the Properties dialog box for the update launcher; this Properties dialog box opens when end users right-click the Update.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Update Launcher</a>.</p>
<b>LauncherCopyright</b>	Read-Write Property	<p>Gets or sets the launcher copyright notice. This will override the default copyright notice for Update.exe with your product's copyright notice, enter your product's copyright notice.</p> <p>The copyright notice is displayed on the Properties dialog box for the update launcher; this Properties dialog box opens when end users right-click the Update.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Update Launcher/</a></p>
<b>LauncherDescription</b>	Read-Write Property	<p>Gets or sets the launcher description. This will override the default description for Update.exe with your own description, enter the appropriate description.</p> <p>The description is displayed on the Properties dialog box for the update launcher; this Properties dialog box opens when end users right-click the Update.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Update Launcher</a>.</p>

Name	Type	Description
<b>LauncherIcon</b>	Read-Write Property	<p>Gets or sets the icon for the Update.exe file. To use your own icon for the Update.exe file, set the fully qualified name of the file that contains the icon. To specify a file, type an absolute path or a path that is relative to a path variable..</p> <p>By default, the icon with index 0 is used; to specify a different icon, either select an icon in the Change Icon dialog box or append the icon's index or resource ID (preceded by a minus sign) to the file name. For example, C:\Temp\MyLibrary.dll,2 indicates the icon with an index of 2, and C:\Temp\MyLibrary.dll,-100 indicates the icon with a resource ID of 100.</p> <p>If you leave this setting blank, InstallShield uses a default icon for your Update.exe file.</p>
<b>LauncherPassword</b>	Read-Write Property	<p>Gets or sets the password to protect your application. You must set True for the PasswordProtected property to activate password protection.</p> <p>When you password-protect your patch, any end user who wants to apply your patch must enter a case-sensitive password to launch your update.</p> <p>This setting is applicable only to patches that use an Update.exe file.</p>
<b>LauncherProductName</b>	Read-Write Property	<p>Gets or sets the product name. This will override the default product name for Update.exe with your product name.</p> <p>The product name is displayed on the Properties dialog box for the update launcher; this Properties dialog box opens when end users right-click the Update.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Update Launcher</a>.</p>

Name	Type	Description
<b>LauncherProductVer</b>	Read-Write Property	<p>Gets or sets the product version. This will override the default product version for Update.exe with your product version, enter your product version.</p> <p>The product version is displayed on the Properties dialog box for the update launcher; this Properties dialog box opens when end users right-click the Update.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Update Launcher</a>.</p>
<b>LeaveIntermDecompressed</b>	Read-Write Property	<p>Set True to leave all .msp file information in a temporary folder. This information can be useful when troubleshooting. If you do not want this information stored, select No.</p>
<b>ListOfPatchGuidsToReplace</b>	Read-Write Property	<p>To replace one or more earlier installed patches with the current patch, set this property to the patch GUIDs of those patches, and separate each with a comma. For example:</p> <p>{C86838C9-DEDC-4451-B96F-94AFB9460F15},{C8633E5B-AC44-45d8-B487-C68B3B1F60D6}</p> <p>Setting this property is typically not required, even if you have several patch configurations in the Patch Design view. However, if your patch does not overwrite files added in an earlier patch, it may be necessary to set this property.</p>
<b>ListOfTargetProductCodes</b>	Read-Write Property	<p>Set this property with the product codes that you want to target with this patch, and separate each with a comma. If you enter an asterisk (*) for this setting, InstallShield replaces it at build time by the product codes of the installations that are listed as previous images in this patch configuration.</p>
<b>ManufacturerName</b>	Read-Write Property	<p>Gets or sets the name of the application's manufacturer.</p>
<b>MinimumRequiredMsiVersion</b>	Read-Write Property	<p>Specify the minimum version of Windows Installer that is required by the patch. For example, for a minimum of Windows Installer 2.0, enter 200. For a minimum of Windows Installer 3.0, enter 300. For a minimum of Windows Installer 3.1, enter 301.</p>

Name	Type	Description
<b>MinorUpdateTargetRTM</b>	Read-Write Property	<p>MSI 3.1 Required</p> <p>Set this property to True if you want your minor-upgrade patch to essentially remove all of the patches up to the release to manufacturing (RTM) version of the product (or the most recent major upgrade of the product, if one has been installed) before applying the current minor-upgrade patch. With this option, all patches (with or without sequencing data) are removed. You do not need to target additional baseline versions and thus increase the patch payload. All end users can successfully apply the patch without applying any intermediate patches.</p> <p>If you do not want your minor-upgrade patch to remove all of those earlier patches, set False. If you select this option, it may be necessary for your patch to contain the information needed to target each of the earlier minor upgrades that were created after the RTM (or the most recent major upgrade of the product, if one was created).</p> <p>For example, if you are creating a minor-upgrade patch for service pack 2 and you select No for this property, your patch needs to target the minor-upgrade patch for service pack 1. You could also optionally target other baselines (such as RTM); doing so would increase the patch payload. Note that if you do not target the RTM version, any end user who has the RTM version but not the service pack 1 minor-upgrade patch would need to install service pack 1 before service pack 2.</p> <p>Versions of Windows Installer earlier than 3.1 ignore this setting.</p>
<b>MoreInfoURL</b>	Read-Write Property	<p>Gets or sets the uniform resource locator (URL) of the support URL that you would like your customers to visit for technical support.</p>

Name	Type	Description
<b>OptimizedInstallMode</b>	Read-Write Property	<p>Set this property to True if you want Windows Installer 3.1 to optimize the patching process so that it reduces the time that is required to apply the current patch. If the patch only modifies a select list of tables, Windows Installer 3.1 ignores the actions that are associated with all other tables. For more information, including the list of tables, see "Patch Optimization" in the Windows Installer Help Library.</p> <p>If you set True for this property, Microsoft Corporation recommends that you test your patch extensively to ensure that it behaves as expected.</p> <p>If you do not want Windows Installer 3.1 to optimize the patching process for the current patch, set False. Windows Installer will run a complete repair of the application when the patch is applied to the target machine.</p> <p>Versions of Windows Installer earlier than 3.1 ignore this property. Windows Installer 3.0 optimizes patches if the patch only modifies the select list of tables. To avoid patch optimization by Windows Installer 3.0, you must use the <code>DisableFlyWeightPatching</code> policy.</p> <p>For more information, see <a href="#">DisableFlyWeightPatching</a> in the Windows Installer Help Library.</p> <p>Versions of Windows Installer earlier than 3.0 run a complete repair of the installation when a patch is applied.</p>
<b>OptimizeForLargeFiles</b>	Read-Write Property	<p>Set this property to True to create small bit-level patches for all application files larger than 4 MB in your installation project.</p>
<b>PasswordProtected</b>	Read-Write Property	<p>Set this property to True to password-protect your patch, and then set a password using <code>LauncherPassword</code> property. When you password-protect your patch, any end user who wants to apply your patch must enter a case-sensitive password to launch your update.</p> <p>This setting is applicable only to patches that use an <code>Update.exe</code> file.</p>

Name	Type	Description
<b>PatchCacheDirectory</b>	Read-Write Property	Specify a directory where the temporary files from patch caching should be stored. These intermediate files are left indefinitely on your system.
<b>PatchCommandLine</b>	Read-Write Property	<p>Gets or sets the MSI Command-Line Arguments. These Windows Installer arguments are written to Setup.ini.</p> <p>[Startup]</p> <p>CmdLine=Your Value</p> <p>The default value for this property is</p> <p>REINSTALLMODE=omus REINSTALL=ALL</p> <p>The REINSTALL property is a string that contains letters specifying the type of reinstallation to be performed. For more information, see <a href="#">REINSTALLMODE Property</a> in the Windows Installer Library.</p>
<b>PatchGuid</b>	Read-Write Property	Set the patch GUID is used to uniquely identify a patch package. InstallShield automatically generates a new GUID for this property every time you build the patch if the Generate Patch GUID property is set to True.
<b>PatchOutputPath</b>	Read-Write Property	<p>Specify where you want your patch file built or browse for an existing folder. InstallShield appends the following subdirectories to your output location:</p> <p>\PatchConfigName\Patch.</p>
<b>SignatureDescription</b>	Read-Write Property	<p>Gets or sets the signature description that you want to use for the patch package and Update.exe file, if applicable. The description that you specify is displayed on the User Account Control (UAC) box to the right of the "Program Name:" label. The UAC dialog box opens when an end user launches the signed file and elevated privileges are required.</p> <p>If you leave this setting blank, InstallShield uses the name of the file without its extension as the description to the right of the "Program Name:" label on the UAC dialog box.</p>

Name	Type	Description
<b>SignaturePassword</b>	Read-Write Property	Gets or sets the password for .pfx file that you are using. InstallShield encrypts the password and stores it in your project file (.ism).  At build time, InstallShield uses the password to sign files with a .pfx file. If your certificate is protected by a password but you do not enter it in this setting, signing with a .pfx file fails.
<b>SignatureSPC</b>	Read-Write Property	Gets or sets the digital certificate information that you want to use to sign your patch package. Use either the location of the .pfx file or information about the certificate store that contains the certificate.
<b>SignatureURL</b>	Read-Write Property	Gets or sets the fully qualified URL—for example, http://www.mydomain.com. This URL is used in your digital signature to link to a site that you would like end users to visit to learn more about your product, organization, or company.
<b>SignPackage</b>	Read-Write Property	Set this property to True if you want to digitally sign your patch package.
<b>SignUpdateExe</b>	Read-Write Property	Set this property to True if you want to digitally sign Update.exe file.
<b>TargetProductName</b>	Read-Write Property	Gets or sets the name of the application or the target application suite.
<b>UpdateLauncherName</b>	Read-Write Property	Gets or Sets file name (without the .exe file extension) for update launcher that InstallShield should use for the update launcher file that it generates at build time. If this setting is blank, InstallShield uses the default value of 'Update', and the update launcher file is called Update.exe.
<b>ValidateAtBuild</b>	Read-Write Property	Set this property to True if you want to use the upgrading and patching validation every time you build a patch.

## AddLatestSetup Method

**Project** • This information applies to the following project types:

- Basic MSI

- *InstallScript MSI*

Call the AddLatestSetup method to add latest setup item to the current patch configuration. Using this method is similar to adding a latest setup item with the Patch Design View of the IDE. You can set the properties of the new latest setup with the ISWiLatestSetup object.

## Syntax

```
AddLatestSetup(LatestSetupName As String) As ISWiLatestSetup
```

## Parameter

**Table 84** • AddLatestSetup Method Parameter

Parameter	Description
<b>LatestSetupName</b>	Holds the name of latest setup item.

## Applies To

- *ISWiPatchConfig*

## DeleteLatestSetup Method

**Project** • This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the DeleteLatestSetup method to remove specified latest setup item from the current patch configuration.

## Syntax

```
DeleteLatestSetup (LatestSetup As ISWiLatestSetup) As Long
```

## Parameter

**Table 85** • DeleteLatestSetup Method Parameter

Parameter	Description
<b>LatestSetup</b>	Holds the latest setup item object to be deleted.

## Applies To

- *ISWiPatchConfig*

## ISWiPatchExternalFile Object

**Project** - This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Indicates the external file object that you want to create a binary file patch against versions of an application file that have not been shipped as part of the previous setup.

For example, if one of your application files was potentially updated by another setup, you should reference that file version to ensure that the file level patch can be successfully applied at runtime.

### Members

**Table 86** - ISWiPatchExternalFile Object Members

Name	Type	Description
<b>Component</b>	Read-Only Property	Gets or Sets the file path for the external file to associate with the File key that you specified in the FileKey property.  This is the file that may need to be updated when the patch is applied.
<b>FileKey</b>	Read-Only Property	Gets or Sets the file key with which you want to associate the external file.
<b>Name</b>	Read-Only Property	Gets the previous setup name.

### Applies To

- ISWiProject

## ISWiPatchWholeFile Object

**Project** - This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Indicates the file object that you want to include as whole file in your patch rather than have the build perform a bit-level difference of the files.

**Important** - To include all of your files as whole files, set the Include Whole Files property for the patch configuration to Yes.

## Members

**Table 87** • ISWiPatchWholeFile Object Members

Name	Type	Description
<b>Component</b>	Read-Only Property	Gets or Sets the component name that the whole file belongs to.
<b>FileKey</b>	Read-Only Property	Gets the FileKey property of whole file. This value is set by passing argument to AddPatchWholeFile method

## Applies To

- [ISWiProject](#)

## ISWiPathVariable Object

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

ISWiPathVariable represents a path variable that is included in the current project. The path variable can be an existing one that was created from the Path Variables view in InstallShield, or one that was added by calling the [AddPathVariable method](#).

**Important** • Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

## Members

**Table 88** ■ ISWiPathVariable Object Members

Name	Type	Description
<b>Name</b>	Read-Write Property	Retrieves or sets the name of the path variable.
<b>PathVarType</b>	Read-Write Property	<p>This enumerated integer property specifies the type of the path variable. Available values are:</p> <ul style="list-style-type: none"> <li>● <b>epvtPreDefined (1)</b>—Predefined path variables are variables that are set to certain standard Windows directories. These variables cannot be renamed or modified, but they can be used in your installation project to point to predefined directories.</li> <li>● <b>epvtCustom (2)</b>—Custom path variables are sometimes referred to as <i>standard path variables</i> or <i>user-defined variables</i>. These variable types are defined through InstallShield. These variables do not rely on any outside sources, such as the registry or system paths.</li> <li>● <b>epvtEnvironment (4)</b>—Environment path variables are based on the values of your system's environment variables. You can set an environment path variable in your project to an existing environment variable on your machine.</li> <li>● <b>epvtRegistry (8)</b>—Registry path variables enable you to define your own variables based on the default value of a specified registry key. The registry key must already be present when you set a path variable to the value of the key.</li> </ul>
<b>TestValue</b>	Read-Write Property	Retrieves or sets the test value of the path variable.
<b>Value</b>	Read-Write Property	<p>Retrieves or sets the value of the path variable.</p> <p><b>For Standard Path Variables</b></p> <p>For standard variables, enter the directory to which you would like your variable to point.</p>  <p><b>Note</b> ■ You can also refer to other path variables in the defined value by enclosing the referenced path variable name in angled brackets. For example, if you have a path variable called <i>MyRoot</i> with a value of <i>C:\</i>, you can refer to it in a path variable definition for another variable, such as <i>Games</i>. The actual path for the <i>Games</i> variable might be <i>C:\Programs\GameFiles</i>, but you can define <i>Games</i> as <i>&lt;MyRoot&gt;\Programs\GameFiles</i>. However, if you attempt to self-reference a path variable, the literal string is used instead. For example, defining <i>Games</i> as <i>&lt;MyRoot&gt;\Programs\&lt;Games&gt;</i> actually results in <i>Games</i> defined as <i>C:\Programs\&lt;Games&gt;</i>.</p>

**Table 88** • ISWiPathVariable Object Members (cont.)

Name	Type	Description
Value (cont.)		<p><b>For Registry Path Variables</b></p> <p>Enter the complete registry key, with the final “subkey” being the name of the value whose data contains the folder. For example, define <i>MyRegVar</i> as follows:</p> <pre>HKEY_LOCAL_MACHINE\SOFTWARE\TestKey\TestValue</pre> <p>Assume that TestKey has the following subkey and values:</p> <pre>[HKEY_LOCAL_MACHINE\SOFTWARE\TestKey] @="C:\MyPath1" "TestValue"="C:\MyPath2" [HKEY_LOCAL_MACHINE\Software\TestKey\TestValue] @="C:\MyPath3"</pre> <p>Even though HKEY_LOCAL_MACHINE\SOFTWARE\TestKey has a subkey called TestValue, <i>MyRegVar</i> points to the value TestValue, and the current value will be C:\MyPath2. (Note, however, that if a value named TestValue does not exist, InstallShield reads the default value (C:\MyPath3) of the subkey HKEY_LOCAL_MACHINE\SOFTWARE\TestKey\TestValue.)</p> <p><b>For Environment Path Variables</b></p> <p>For environment path variables, enter the name of the variable as it appears on the Environment dialog box.</p>

### Applies To

- ISWiProject

## ISWiPreviousSetup Object

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Indicates the Previous Setup (or TargetImage) item that needs to be patched to latest setup.

## Members

**Table 89** • ISWiPreviousSetup Object Members

Name	Type	Description
<b>IgnoreMissingFiles</b>	Read-Only Property	Set this Boolean property to True to exclude the files from the patch package that are included in two separate versions cannot be found in a more recent version, unless they have changed in the later version. The advantage of ignoring the files is that only the modified files need to be added to the package. A complete setup image is not required if you choose to ignore missing source files.
<b>MsiPath</b>	Read-Only Property	Gets or Sets the previous version setup path that needs to be patched.
<b>Name</b>	Read-Only Property	Gets the previous setup name.
<b>Order</b>	Read-Only Property	Gets or Sets the sequence of this patch within the specified PatchFamily. The value in Sequence is expressed in the format of Version data. The value contains between 1 and 4 fields and each field has a range of 0 to 65535. Members of PatchFamily are sorted and applied to the target product in the order of increasing Sequence values. For example, the following six values are increasing: 1, 1.1, 1.2, 2.01, 2.01.1, 2.01.1.1.
<b>ValidateFlags</b>	Read-Only Property	Set this Boolean property to True to indicate that the small update patch supersedes the updates provided by all patches with lesser Sequence values in the same PatchFamily.

## Applies To

## ISWiProductConfig Object

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

*InstallScript and InstallScript Object projects contain only one element in ISWiProductConfigs; it is named Media.*

*Only some of the members of ISWiProductConfig apply to InstallScript and InstallScript Object projects.*

ISWiProductConfig represents a product configuration in the Releases view of the InstallShield user interface. You can retrieve a configuration by specifying an item in the [ISWiProductConfigs](#) collection.

## Members

**Table 90** • ISWiProductConfig Object Members

Name	Project	Type	Description
<b>AddRelease</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Adds a release to the current product configuration.
<b>ArchitectureValidation</b>	Basic MSI, Merge Module	Read-Write Property	<p>Set this property to one of the following values to indicate what type of build-time architecture validation you want to perform:</p> <ul style="list-style-type: none"> <li>● <b>epvtLenient (0)</b>—Lenient architecture validation, which is the default type of validation, does not trigger build errors or warnings if the architecture that the Template Summary property specifies does not match the architecture for one or more of the product files or the custom action files that are being included in the release.</li> <li>● <b>epvtStrict (1)</b>—Strict validation may trigger build errors and warnings if the architecture that the Template Summary property specifies does not match the architecture for one or more of the product files or custom action files that are being included in the release.</li> </ul> <p>The value of this property also influences whether InstallShield includes 32-bit or 64-bit versions of the built-in InstallShield custom action DLLs.</p> <p>To learn more, see <a href="#">Selecting the Appropriate Type of Architecture Validation for Builds</a>.</p>
<b>ConfigFlags</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets a string that contains the release flags that you want to use to filter your features. Separate multiple flags with a comma.

**Table 90** - ISWiProductConfig Object Members (cont.)

Name	Project	Type	Description
<b>DeleteRelease</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Deletes the specified release from the current product configuration.
<b>GeneratePackageCode</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Set this property to True to generate a new package code for every release you build under this product configuration.</p> <p>If this property is not specified or set to False, then the existing package code under the product configuration is used. However, the Summary Information Stream's package code is used if you have not specified one here.</p>
<b>ISWiReleases</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Collection	Contains all of the releases belonging to this product configuration.
<b>MSIPackageFileName</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the value of the MSI Package File Name setting of the current product configuration.
<b>Name</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Only Property	Returns the name of the current product configuration.

**Table 90** ■ ISWiProductConfig Object Members (cont.)

Name	Project	Type	Description
<b>PackageCode</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets a string GUID for the package code that is built into this product configuration's releases. Neither the package code you enter in this property nor the Summary Information Stream's package code is used if you set the GeneratePackageCode property, above, to True.
<b>ProductCode</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets a string GUID for the product code that is built into this product configuration's releases.</p>  <p><b>Note</b> ■ The GUID must be surrounded by braces{12345678-1234-1234-1234-1234567890AB}, for example.</p>
<b>ProductName</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the product name that is built into this product configuration's releases.
<b>ProductVersion</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets a string that contains the product's version number, which overrides the Product Version property for every release you build under this product configuration.
<b>SetupFileName</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the value of the Setup File Name setting for the current product configuration.
<b>Setup64bitLauncher</b>	Basic MSI	Read-Write Property	<p>Gets or sets the value of the 64-Bit Setup Launcher setting for the current product configuration. The possible values are:</p> <ul style="list-style-type: none"> <li>● TRUE - to 64-bit Setup Launcher.</li> <li>● FALSE - to 32-bit Setup Launcher.</li> </ul>
<b>Subject</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the value of the Subject setting for the current product configuration.
<b>Title</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the value of the Title setting for the current product configuration.

**Table 90** ▪ ISWiProductConfig Object Members (cont.)

Name	Project	Type	Description
<b>UpgradeCode</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets the resulting setup package's Upgrade Code property.

### Applies To

- ISWiProject

## AddRelease Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the AddRelease method to add a release to the current product configuration. Using this method is similar to creating a release in the Release Wizard or the Releases view of the IDE.

### Syntax

```
AddRelease (ReleaseKey As String) As ISWiRelease
```

### Parameters

**Table 91** ▪ AddRelease Method Parameters

Parameter	Description
<b>ReleaseKey</b>	Pass the name of the release you would like to create in the current product configuration.

### Applies To

- ISWiProductConfig

## DeleteRelease Method

**Project** ▪ This information applies to the following project types:

- Basic MSI

- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

Call the `DeleteRelease` method to delete a release from the current product configuration. Using this method is similar to deleting a release in the Releases view of the IDE.

## Syntax

`DeleteRelease (Release As ISWiRelease)`

## Parameters

**Table 92** ▪ DeleteRelease Method Parameters

Parameter	Description
<b>ReleaseKey</b>	Pass the name of the release you want to delete from the current product configuration.

## Applies To

- *ISWiProductConfig*

# ISWiProperty Object

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

`ISWiProperty` represents a Windows Installer property in the Property Manager of the InstallShield user interface. You can retrieve a property by specifying an item in the `ISWiProperties` collection.

## Members

**Table 93** • ISWiProperty Object

Name	Type	Description
<b>Comments</b>	Read-Write Property	Gets or sets the comments associated with the Windows Installer property.
<b>Name</b>	Read-Only Property	Contains the name of the property.
<b>Value</b>	Read-Write Property	Gets or sets the property's value.

## Example

The following example sets the property ApplicationUsers to “OnlyCurrentUser,” which means that the option “Only for me” is selected by default in the CustomerInformation dialog:

```
Dim pProject As ISWiProject

Set pProject = New ISWiProject
pProject.OpenProject "C:\MySetups\ISWiProperties.ism"

Dim pProperty As ISWiProperty
Set pProperty = pProject.ISWiProperties.Item("ApplicationUsers")

pProperty.Value = "OnlyCurrentUser"
pProperty.Comments = "Make ""Only for me"" the default radio button " & _
    "in the CustomerInformation dialog."

pProject.SaveProject
```

## Applies To

- [ISWiProject](#)

## ISWiRelease Object

**Project** • This information applies to the following project types:

- *Basic MSI*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

*Project-specific differences are noted where appropriate.*

ISWiRelease represents an existing release in the Releases view of InstallShield. You can retrieve a release by specifying an item in the [ISWiReleases](#) collection. The release must have been created through the Release Wizard, the Releases view, or the command-line tool ISCmdBld.exe.

## Members

**Table 94** • ISWiRelease Object Members

Name	Project	Type	Description
<b>BatchFileName</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Execute Batch File property, which specifies the filename of a batch file or executable file to execute after the release build is complete.
<b>BrowsersToSupport</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>This property indicates which browsers a One-Click Install type of installation will support. Specify the following value:</p> <ul style="list-style-type: none"> <li>● <b>eocitble (0)</b>—Internet Explorer</li> </ul> <p>This property applies only to One-Click Web releases.</p>
<b>Build</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Method	Builds the current release. This is a full and complete build.
<b>BuildErrorCount</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Only Property	After the Build method is run on the ISWiRelease object, BuildErrorCount contains the number of errors that occurred while the build process was running.
<b>BuildLocation</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	Gets or sets a string that identifies the top-level directory where the release will be built.
<b>BuildTablesOnly</b>	Basic MSI, InstallScript MSI, Merge Module	Method	Builds only the Windows Installer tables of the current release.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>BuildTablesRefreshFiles</b>	Basic MSI, InstallScript MSI	Method	Rebuilds your .msi file and updates the Files table, including any new or changed files in your release.
<b>BuildUTF8Database</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>If you want the Windows Installer database, along with any instance or language transforms, to be built using the UTF-8 encoding, set this Boolean property to True. The UTF-8 encoding supports characters from all languages simultaneously, enabling you to mix and match, for example, Japanese and German, or Russian and Polish, both in text shown to end users and in file names and registry keys. These mixed languages work correctly regardless of the current language of the target system. However, some scenarios result in user interface issues. For example, if an end user specifies the /qb command-line option or uninstalls the product from Add or Remove Programs, Windows Installer uses very small fonts to display the user interface text in a UTF-8 database.</p> <p>If you set this property to True, InstallShield creates an ANSI database when you build your release. This option does not let you mix characters from languages in different code pages.</p>
<b>BuildWarningCount</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Only Property	After the Build method is run on the ISWiRelease object, BuildWarningCount contains the number of warnings that occurred while the build process was running.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>CabCompressionType</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>If the Compressed property is set to True, you can use this CabCompressionType property to specify the type of compression that InstallShield should use when building this release's .cab files. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>ecctLZX (3)</b>—InstallShield uses LZX compression to compress your product's data files into .cab files. This option results in the smallest .cab files; however, it also takes the most time to extract the data from these .cab files at run time.</li> <li>● <b>ecctMSZIP (1)</b>—InstallShield uses MSZIP compression to compress your product's data files into .cab files.</li> <li>● <b>ecctNone (0)</b>—InstallShield does not use any compression when creating the .cab files.</li> </ul> <p></p> <p><b>Important</b> • Using compression generally decreases the size of your compressed files, but the build process may take more time to complete. Depending on the number and size of the files being compressed, the LZX compression and the build may take hours to complete. Therefore, if you select the LZX option, it is recommended that your build machine have the latest hardware to minimize the time that it takes for the build to complete.</p>
<b>CachePath</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies where cached installation files should be stored on the end user's system. Use a hard-coded value such as <b>C:\CachedFiles</b>.</p> <p>This property is used only if the CacheWebDownload property for the current build is set to True.</p>

**Table 94** ■ ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>CacheWebDownload</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies whether the installation files for the current build should be cached on the target system. Set this to True to cache the installation files on the target system for use with application maintenance and repair.</p> <p>Use the CachePath property to indicate where the cached files should be stored on the end user's system.</p> <p>This property is used only if the WebType property for the current build is set to ewtOneExe (2) (one executable).</p>
<b>CertificatePassword</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Write-Only Property	<p>Sets the password for the .pfx file if the file has a password. InstallShield encrypts the password and stores it in your project file (.ism).</p> <p>At build time, InstallShield uses the password to sign files with a .pfx file. If your certificate is protected by a password but you do not enter it in this setting, signing with a .pfx file fails.</p> <div data-bbox="1036 1144 1073 1188" data-label="Image"></div> <p><b>Note</b> ■ This property is not applicable if the certificate that you are using for signing is in a certificate store. Note that if the certificate was imported into the store with password protection, you will be prompted to enter the password at build time.</p>
<b>CertificateURL</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Gets or sets the URL that is used in your digital certificate to link to a location that you would like end users to visit to learn more about your product, organization, or company. Use a fully qualified URL—for example, <b>http://www.mydomain.com</b>.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>Compressed</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Set this property to True if you want all of the package's files compressed into the .msi file, the .msm file, or Setup.exe, if selected. A value of False means that your application files are placed uncompressed in subfolders of the release location.</p> <p>Unlike the flexibility available in the Release Wizard's Custom Compression Settings panel, this property either compresses all or none of the files in the release.</p>
<b>CompressScript</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the release's Compress Script property, which specifies whether the compiled script file (.inx file) is placed in a cabinet file (True) or is placed uncompressed in the Disk1 disk image folder (False).
<b>CopyToFolder</b>	InstallScript, InstallScript Object	Read-Write Property	<p>Gets or sets the release's Copy To Folder property, which specifies a folder location to which to copy the release's disk image folders after the release build is complete. Existing folders with the same names as copied folders are overwritten but no folders are deleted.</p> <div>  <p><b>Project</b> • For Basic MSI, InstallScript MSI, and Merge Module projects, use the <i>DistributeLoc</i> property instead of <i>CopyToFolder</i> to distribute your release to a folder.</p> </div>
<b>CreateAutorunINF</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to True to create an Autorun.inf file at the root of your release location.
<b>CreatePDF</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to True to generate a package definition file for your installation, False otherwise.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>CubFile</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the name of the validation module (.cub file) that InstallShield uses to validate the built release.
<b>DefaultLang</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Read-Write Property	<p>Gets or sets the language identifier for the default language of a given release. This property value overrides the default project language that is configured in the General Information view or the String Editor view.</p> <p>For more information, see <a href="#">Setting the Default Project Language</a>.</p>
<b>DelayMSIEngineReboot</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies whether you want to postpone any reboot associated with installing or updating the Windows Installer engine on the target system until after your installation has completed.</p> <p>Set this to True to postpone the reboot, if one is necessary. Set this to False to allow the system to reboot, if necessary, immediately after the Windows Installer engine has been installed or updated and before performing your installation.</p> <p>This option requires Windows Installer version 2.0.</p>

Table 94 • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>DigitalCertificateInfo</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Gets or sets the digital certificate that you want to use to sign your release. InstallShield lets you choose between the following options:</p> <ul style="list-style-type: none"> <li>● To specify the .pfx certificate file that you want to use for signing, set this property equal to the fully qualified path and file name of the .pfx file on your build machine.</li> </ul> <p>Instead of hard-coding a path, you can use a path variable that is defined in the Path Variables view or part of the ISWiPathVariables collection. At build time, InstallShield replaces the path variable with the appropriate value.</p> <ul style="list-style-type: none"> <li>● To reference a certificate store that contains the certificate that you want to use for signing, set this property equal to a certificate store string.</li> </ul> <p>To pass a certificate store string as the value, use the following convention:</p> <p>*Store*StoreLocation:Cert Subject</p> <p>For <b>Store</b>, pass one of the following values:</p> <ul style="list-style-type: none"> <li>● MY</li> <li>● CA</li> <li>● Trust</li> <li>● Root</li> </ul> <p>For <b>StoreLocation</b>, pass one of the following values:</p> <ul style="list-style-type: none"> <li>● User</li> <li>● Machine</li> </ul> <p>For <b>Cert Store</b>, pass the subject of the certificate that you want to use.</p> <p>To learn more, see <a href="#">Digital Signing and Security</a>.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>DisplayDotNetOptionDialog</b>	Basic MSI, DIM, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Set this property to True if you want the installation to display the .NET option message box at run time. This message box allows the end user to specify whether to install the .NET Framework.</p> <p>Set this property to False if the installation should not allow end users to determine whether they want to install the .NET Framework.</p> <p></p> <p><b>Note</b> ▪ This property does not determine whether your installation includes the .NET Framework, only whether the end user has a choice to install it.</p>
<b>DistributeAfterBuild</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Set this to True if you want the build engine to automatically distribute the current release after each build to the location that you specify for the DistributeLoc or DistributeToURLLoc properties.</p> <p></p> <p><b>Note</b> ▪ When both the DistributeLoc and DistributeToURLLoc properties are specified, the release is copied to only the FTP location.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>DistributeLoc</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>If you want to be able to automatically distribute your release to a folder, specify the location for this property.</p> <p>The DistributeAfterBuild property must be set to True.</p> <p>Note that existing folders with the same names as copied folders are overwritten, but no folders are deleted.</p> <p>If the media format of the selected release is a network image, which creates only one disk image folder, the contents of the disk image folder, rather than the folder itself, are copied. If you chose to create a self-extracting executable file, the executable file, rather than the disk image folders, is copied.</p> <div data-bbox="1036 976 1075 1020" data-label="Image"></div> <p><b>Note</b> • When both the <i>DistributeLoc</i> and <i>DistributeToURLLoc</i> properties are specified, the release is copied to only the FTP location.</p>

Table 94 ■ ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>DistributeToURLLoc</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>If you want to be able to automatically distribute your release to an FTP server, specify the FTP URL for the location for this property.</p> <p>The <code>DistributeAfterBuild</code> property must be set to <code>True</code>.</p>  <p><b>Note</b> - If you need to distribute your release to a path outside the FTP default folder, use a double slash (/). For example, to distribute your release to a root-level folder called <b>myproduct</b>, where the URL of the FTP server is <b>ftp://ftp.mydomain.com</b>, enter <b>ftp://ftp.mydomain.com/myproduct</b> for the FTP location.</p> <p>When both the <code>DistributeLoc</code> and <code>DistributeToURLLoc</code> properties are specified, the release is copied to only the FTP location.</p>
<b>DistributeToURLPassword</b>	Basic MSI, InstallScript MSI, Merge Module	Write-Only Property	If a password is required to upload to the FTP location that you are specifying, specify the password for this property.
<b>DistributeToURLUserName</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	If a user name is required to upload to the FTP location that you are specifying, specify the user name for this property.
<b>DotNetBaseLanguage</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set the language of the user interface of the .NET framework installation. If you set <code>DotNetVersion</code> to '1', then you must set this property.
<b>DotNetBuildConfiguration</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this to the active release name in your corresponding .NET Project file. Typical values would be <i>Release</i> and <i>Debug</i> .

Table 94 ■ ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>DotNetDelayReboot</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies whether you want to postpone any reboot associated with installing or updating the .NET Framework on the target system until after your installation has completed.</p> <p>Set this property to True to delay any prompts to reboot until after the installation is finished.</p> <div>  </div> <p><b>Note</b> ■ The .NET Framework may not function until after the target system is restarted. Therefore, it is strongly recommended that you set this property to False if the .NET Framework is used during the installation.</p>
<b>DotNetFrameworkLocation</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this to one of the following values to indicate how you want to package the .NET Framework redistributable into your installation:</p> <ul style="list-style-type: none"> <li>● <b>eelSourceMedia (0)</b>—Leaves the .NET Framework run time on the root of the source media.</li> <li>● <b>eelSetupExe (1)</b>—Extracts the .NET Framework from Setup.exe at run time.</li> <li>● <b>eelWeb (2)</b>—Downloads the .NET Framework run time from a default URL or a URL specified with the DotNetFrameworkURL property, described below.</li> <li>● <b>eelDotNetNone (3)</b>—Does not include the .NET Framework in the setup.</li> </ul>
<b>DotNetFrameworkURL</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>If DotNetFrameworkLocation is set to eelWeb (2), this property allows you to override the default location of dotnetfx.exe on the Internet.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>DotNetFxCmdLine</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set the command line that you want to pass to the setup inside of the .NET 1.1 redistributable (dotnetfx.exe).
<b>DotNetLanguagePackCmdLine</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set the command line that you want to pass to the setup inside the .NET 1.1 language pack redistributables (langpack.exe).
<b>DotNetLanguagePacks</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specify the language identifiers representing the additional .NET 1.1 language packs that you want to install.
<b>DotNetUI</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to True if you want to the user interface (UI) from the .NET Framework installation displayed at run time.
<b>DotNetVersion</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to 1 if you want to ship .NET 1.1.
<b>EnableDifference</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the release's Differential Media property, which specifies whether the current release (the release that is selected in the Releases view) is a differential release—that is, a release that contains only those files that were absent from one or more of a specified set of existing releases—or a full release, which contains all your product's files, so that your product can be installed on a system on which no version of your product is currently installed.
<b>EnableLangDlg</b>	All	Read-Write Property	Set this property to True to display the Language Dialog from Setup.exe.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>ExpirationDate</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets an expiration date (ISWiDate) for Setup.exe. If this property is set, end users cannot launch the Setup.exe file on or after the specified date.</p> <p>Following is sample Visual Basic code that sets the expiration date to December 30, 2012.</p> <pre>ISWiDate date date.wYear = 2012 date.wMonth = 12 date.wDay = 30 pISWiRelease.ExpirationDate = date</pre> <p>If you use this property to get or set an expiration date, you can use the ExpirationMessage property to get or set the message that you want to be displayed at run time when an end user tries to launch Setup.exe on or after the expiration date.</p>
<b>ExpirationMessage</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>If you use the ExpirationDate property to set an expiration date, you can use the ExpirationMessage property to get or set the message that you want to be displayed at run time when an end user tries to launch Setup.exe on or after the expiration date.</p> <p>Following is sample Visual Basic code that sets an expiration message.</p> <pre>pISWiRelease.ExpirationMessage = "This setup expired on %s. The setup will now exit."</pre>
<b>FilterLangs</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this property to True to filter language-specific components according to your settings in the SupportedLangsData property, below.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>FTPFolder</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's FTP Site Folder property, which specifies the folder on the FTP server to which you want to copy the disk image folders. This property is applicable only if the FTPHostAddress property is not empty.
<b>FTPHostAddress</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's FTP Host Address property, which specifies the Uniform Resource Locator (URL) of an FTP server to which the build process should upload the disk image folders. Leave this property empty if you do not want this release uploaded to an FTP server.
<b>FTPPassword</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's FTP Site Password property, which specifies the password for the user name that you enter in the FTPUserName property. This property is applicable only if the FTPHostAddress property is not empty.
<b>FTPUserName</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's FTP Site User Name property, which specifies the user name with which you want to gain access to the FTP server. This property is applicable only if the FTPHostAddress property is not empty.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>GenerateFileHashValues</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Indicates whether you want to populate the MsiFileHash table for every unversioned file in your build.</p> <p>Set this to True to populate the MsiFileHash table for every unversioned file in your build. Set this to False if you do not want to populate the MsiFileHash table. If this property is set to False, InstallShield builds any entries that are found in the project's MsiFileHash table (populated using the Direct Editor).</p> <p>If you have already populated the MsiFileHash table for a particular file, the build uses that information instead of generating the information at build time.</p>
<b>GenerateOneClickInstall</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this property to True to create a One-Click Install. If this property is set to True, you must specify file names in the OneClickHTMLBaseName and OneClickCabJarBaseName properties for this release.</p> <p>This property is ignored unless the release's Media Format property is set to Web via the Release Wizard's Media Type panel.</p>
<b>IFTWCabSizeInKb</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies the size, in kilobytes, of the cabinet (.cab) files built for the Web media type. Specify the value 0 (zero) to build a separate cabinet file for each component.</p> <p>This property is used only if the WebType property for the current release is set to ewtIFTW (1) (Install From The Web).</p>
<b>InitDlgProductName</b>	InstallScript, InstallScript Object	Read-Write Property	<p>Gets or sets the release's Init Dialog Product Name property, which specifies the product name to display in the setup initialization dialog box. If you leave this property empty, the product name that you specify in the General Information view.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>JSharpCmdLine</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specify a command-line parameter to pass to vjredis.exe. Consult Microsoft Support for valid command-line parameters.
<b>JSharpOptionalIfSilent</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to True to install the J# redistributable even if the J# Option dialog cannot be displayed (for example, if the installation is run silently).
<b>JSharpOptionDlg</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to True to display the J# Option dialog, which asks whether the end user wants to install the J# redistributable. If .NET 1.1 is also included in the setup, the dialog states that .NET 1.1 will also be installed.
<b>JSharpRedistLocation</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this to one of the following values to indicate how you want to package the J# redistributable into your setup.</p> <ul style="list-style-type: none"> <li>● <b>eelSourceMedia (0)</b>—Leaves the J# redistributable on the root of the source media.</li> <li>● <b>eelSetupExe (1)</b>—Extracts the J# redistributable from Setup.exe at run time.</li> <li>● <b>eelWeb (2)</b>—Downloads the J# redistributable from a default URL or a URL specified with the DotNetFrameworkURL property.</li> <li>● <b>eelDotNetNone (3)</b>—Does not include the J# redistributable in the setup.</li> </ul>

Table 94 ■ ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>KeepUnusedDirectories</b>	Basic MSI, InstallScript MSI, Merge Module	Read-Write Property	<p>Specify whether you want InstallShield to remove unused directories from the Directory table of the .msi file when you build this release. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>False</b>—If a directory that is listed in the Directory column of the Directory table is not referenced in any known location in the .msi file, InstallShield removes it from the Directory table of the .msi file that it creates at build time. For Basic MSI and InstallScript MSI projects, this occurs after any merge modules are merged, but only directories that are present in the .msi file are removed; therefore, if a merge module contains new unused directories in its Directory table, the new unused directories are added to the installation.</li> <li>● <b>True</b>—InstallShield does not remove any directories from the Directory table of the .msi file that it creates at build time.</li> </ul> <p>The default value is False.</p> <div>  </div> <p><b>Note</b> ■ Under some conditions, predefined directories cannot be resolved, causing an installation to fail. Removing unused directories from the Directory table enables you to avoid unnecessary failures. Therefore, it is recommended that you do not keep unused directories.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>LauncherCopyright</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Specifies the copyright information for the Properties dialog box of the Setup.exe file. You must set the UseMyVersionInfo property to True to override the default copyright information.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>LauncherFileDescription</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Specifies the file description for the Properties dialog box of the Setup.exe file. You must set the UseMyVersionInfo property to True to override the default file description.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>LauncherPassword</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies a password to protect your application. You must set the PasswordProtectLauncher property to True to activate password protection.</p> <p>This property is applicable only to releases that meet the following criteria:</p> <ul style="list-style-type: none"> <li>● Single-file Setup.exe</li> <li>● Compressed files</li> <li>● Network image media type</li> </ul>
<b>LogFileName</b>	Basic MSI, InstallScript MSI, InstallScript Project	Read-Only Property	Saves the log file location of the last build. Using this file location, you can view the log file of the last build.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>MediaType</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	Read-Only Property	Gets the type of distribution media for the release. Possible values are: <ul style="list-style-type: none"> <li>● 0—CD-ROM</li> <li>● 1—Network image</li> <li>● 2—Custom</li> <li>● 3—DVD</li> <li>● 4—Web</li> <li>● 5—144 MB floppy disk</li> <li>● 6—InstallScript Object</li> </ul>
<b>MSI30EngineURL</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets the uniform resource locator (URL) for the location of the engine. This is the location that the installation file uses at run time to download the engine.
<b>MsiEngineLocation</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specifies where the MSI engine installers should be located. Set this property to one of the following: <ul style="list-style-type: none"> <li>● <b>eelSourceMedia (0)</b>—Copy from the source media. Leaves the MSI engine installers you selected on the root of the source media. This option is not available for Web media types or Network Image media types with all of your files compressed into Setup.exe.</li> <li>● <b>eelSetupExe (1)</b>—Extract engine from Setup.exe.</li> <li>● <b>eelWeb (2)</b>—Download engine from the Web. If you use this setting, be sure to set the MSI30EngineURL property to appropriate Web locations.</li> </ul>
<b>Name</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Only Property	Name of the current release.

Table 94 ■ ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>ObjDiffOptions</b>	InstallScript, InstallScript Object	Read-Write Property	<p>Gets or sets the release's Object Difference property, which specifies the conditions for including InstallShield objects in your differential release. Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>● <b>eodoAll (0)</b>—The differential release will include all objects that would be included in the equivalent full update release.</li> <li>● <b>eodoExcludeAll (1)</b>—The differential release will not include any objects.</li> <li>● <b>eodoIncludeIfChanged (2)</b>—The differential release will include those objects that would be included in the equivalent full update release and that are not found in, or are different from, the corresponding object in at least one of the comparison releases.</li> </ul> <p>This property is applicable only if the EnableDifference property is set to True.</p>
<b>OneClickCabJarBaseName</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies the base file name for the cabinet (.cab) file generated by the build process for a One-Click installation. The “.cab” extension is appended to the name you specify here. The generated file (or files) will be created in the Disk1 folder for the current release.</p> <p>This property is used only if the GenerateOneClickInstall property for the current build is set to True.</p>
<b>OneClickHTMLBaseName</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies the base file name of the HTML file generated by the build process. The “.htm” extension is appended to the base name you specify, and the generated file is created in the Disk1 folder of the current release location.</p> <p>This property is used only if the GenerateOneClickInstall property for the current build is set to True.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>OptimizeSize</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies the level of compression to use in your release's cabinet files. Setting this property to True generally decreases the size of your compressed files, but the build process may take more time to complete.</p> <p>This property is used only if your release compresses some or all of its files.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>OSFilter</b>	InstallScript, InstallScript Object	Read-Write Property	<p>Gets or sets the release's Platform(s) setting, which specifies the operating systems that you want this release to support. If the platform specified for a component does not match one of the platforms that is selected for this property, the component is not included in the release.</p> <p>Use the following constants to set this property:</p> <ul style="list-style-type: none"> <li>• eosOSIndependent = 0</li> <li>• eosWin95 = &amp;H10 (16)</li> <li>• eosWin98 = &amp;H40 (64)</li> <li>• eosWinMe = &amp;H80 (128)</li> <li>• eosWinNT4 = &amp;H10000 (65536)</li> <li>• eosWin2000 = &amp;H100000 (1048576)</li> <li>• eosWinXP = &amp;H400000 (4194304)</li> <li>• eosWinServer2003 = &amp;H800000 (8388608)</li> <li>• eosWinVista = &amp;H1000000 (16777216)—These constants are for Windows Vista and Windows Server 2008.</li> <li>• eosWin7 = &amp;H2000000 (33554432)—These constants are for Windows 7 and Windows Server 2008 R2.</li> <li>• eosWin8 = &amp;H4000000 (67108864)—These constants are for Windows 8 and Windows Server 2012.</li> <li>• eosWin81 = &amp;H8000000 (134217728)—These constants are for Windows 8.1 and Windows Server 2012 R2.</li> <li>• eosAll = &amp;HFD100D0 (265355472)</li> </ul> <p>You can specify multiple platforms; for example, <b>eosWin7 Or eosWinServer2008 Or eosWinVista Or eosWinServer2003</b>.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>PasswordProtectLauncher</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this property to True to password-protect your setup. Specify a password in the LauncherPassword property.</p> <p>This property is applicable only to releases that meet the following criteria:</p> <ul style="list-style-type: none"> <li>• Single-file Setup.exe</li> <li>• Compressed files</li> <li>• Network image media type</li> </ul>
<b>PathVariableOverrides</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Gets or sets the value of a path variable in your project for the specified release. If this property is used to set the value of a path variable, it overrides any value that is set in the Path Variables view.</p> <p>Note that you can use this variable to get or override user-defined path variables, environment variables, and registry variables that are configured in the Path Variables view; however, you cannot override predefined path variables such as <i>&lt;WindowsFolder&gt;</i>.</p> <p>Following is sample Visual Basic code that overrides the value of a path variable called PathVar1:</p> <pre>pISWiRelease.PathVariableOverrides = "PathVar1=C:\Test1" + vbCrLf + "PathVar2=C:\test2"</pre> <p>To learn more about path variables, see <a href="#">Using Path Variables</a>.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>PostbuildEvent</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets the command that you want to be run after InstallShield has built and signed the release.</p> <p>When you are specifying a command, you can use any path variables and environment variables that are defined in your project, instead of using a hard-coded path. You can also use certain variables that are defined specifically for build event commands. To learn more, see <a href="#">Specifying Commands that Run Before, During, and After Builds</a>.</p> <p>Following is sample Visual Basic code that sets two commands:</p> <pre>pISWiRelease.PostbuildEvent = "Event1" + vbCrLf + "Event2"</pre> <p>At build time, InstallShield runs each command in the order that they are listed. The build waits until a command finishes before proceeding to the next one.</p> <div>  <p><b>Edition</b> • This property is available in the Premier edition of InstallShield.</p> </div>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>PrebuildEvent</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets the command that you want to be run before InstallShield starts building the release. This event runs after InstallShield creates the release folder and log file, but before InstallShield starts building the release.</p> <p>When you are specifying a command, you can use any path variables and environment variables that are defined in your project, instead of using a hard-coded path. You can also use certain variables that are defined specifically for build event commands. To learn more, see <a href="#">Specifying Commands that Run Before, During, and After Builds</a>.</p> <p>Following is sample Visual Basic code that sets two commands:</p> <pre>pISWiRelease.PrebuildEvent = "Event1" + vbCrLf + "Event2"</pre> <p>At build time, InstallShield runs each command in the order that they are listed. The build waits until a command finishes before proceeding to the next one.</p> <div>  </div> <p><b>Edition</b> • This property is available in the Premier edition of InstallShield.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>PrecompressionEvent</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets the command that you want to be run after InstallShield has built the .msi package and the .cab files (if your product's data files are to be stored in .cab files). Note that this event occurs after .cab files are streamed into the .msi package, but before the .msi package has been digitally signed and streamed into the Setup.exe file.</p> <p>When you are specifying a command, you can use any path variables and environment variables that are defined in your project, instead of using a hard-coded path. You can also use certain variables that are defined specifically for build event commands. To learn more, see <a href="#">Specifying Commands that Run Before, During, and After Builds</a>.</p> <p>Following is sample Visual Basic code that sets two commands:</p> <pre>pISWiRelease.PrecompressionEvent = "Event1" + vbCrLf + "Event2"</pre> <p>At build time, InstallShield runs each command in the order that they are listed. The build waits until a command finishes before proceeding to the next one.</p>  <p><b>Edition</b> • This property is available in the Premier edition of InstallShield.</p>
<b>PreProcessorDefines</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Compiler Preprocessor Defines setting, which specifies any preprocessor variable definitions.
<b>PreviousPackage</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specifies the fully qualified path to a previous release (.msi file) to minimize the size of future patch packages.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>ReleaseFlags</b>	Basic MSI, InstallScript MSI	Read-Write Property	Gets or sets a string that contains the release flags that you want to use to filter your features. Separate multiple flags with a comma.
<b>RequiredExecutionLevel</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	<p>Gets or sets the minimum level required by your installation's Setup.exe file for running the installation (the setup launcher, any InstallShield prerequisites, and the .msi file) on Windows Vista and later platforms. The available options are:</p> <ul style="list-style-type: none"> <li>● <b>erelAsInvoker (0)</b>—Setup.exe does not require administrative privileges, and all users can run it without administrative privileges. Setup.exe does not display any UAC messages prompting for credentials or for consent. This is the default option for Basic MSI projects.</li> <li>● <b>erelAsHighestAvail (1)</b>—Setup.exe prefers administrative privileges. Administrators must authorize it; non-administrators run it without administrative privileges. This is the default option for InstallScript and InstallScript MSI projects.</li> <li>● <b>erelAsAdmin (2)</b>—Setup.exe requires administrative privileges to run. Administrators must authorize it; non-administrators must authenticate as an administrator.</li> </ul> <p>For more information, see <a href="#">Minimizing the Number of User Account Control Prompts During Installation</a>.</p>
<b>SetupCmdLine</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Setup Command Line property, which specifies any command line parameters you want to pass to Setup.exe when the setup is launched.

Table 94 • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>SetupEXE</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this property to True to create a Setup.exe setup launcher for the current release.</p> <p>The SetupEXE property and the <a href="#">TargetOS property</a> correspond with the Setup Launcher setting on the <a href="#">Setup.exe tab</a> in the Releases view.</p> <p>To learn about scenarios that require a setup launcher, see <a href="#">Creating a Setup Launcher</a>.</p>
<b>ShallowFolderStructure</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to create the .msi file and related files directly in the Release Location without any of the subfolders.
<b>ShowPasswordDlg</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets the release's Show Password Dialog property, which specifies whether to execute the password-checking code in the OnCheckMediaPassword event handler function's default code. This property is applicable only if you specify a non-null password in the Media Password property.
<b>SignFiles</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>If you want to sign any of the files in your release, set this Boolean property to True and then use the <a href="#">SignFilesInclude</a> and <a href="#">SignFilesExclude</a> properties to indicate which files should be signed.</p>  <p><b>Windows Logo</b> • All executable files (including .exe, .dll, .ocx, .sys, .cpl, .drv, and .scr files) in an installation must be digitally signed for the Windows logo program.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>SignFilesExclude</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Specify any files and file patterns that you do not want to be digitally signed at build time. Note the following guidelines:</p> <ul style="list-style-type: none"> <li>● To indicate a wild-card character, use an asterisk (*). For example, if you do not want to sign any .drv files, specify the following: <b>*.drv</b></li> </ul> <p>Using wild-card characters is especially helpful if you include dynamically linked files in your project and you want to avoid signing any files that match a certain pattern.</p> <ul style="list-style-type: none"> <li>● Put each file and each file pattern on its own line, with each separated by a carriage return.</li> <li>● Note that the files and file patterns that should not be signed override any files and file patterns that should be signed. For example, if you specify <b>*.exe</b> for the SignFilesInclude property and the SignFilesExclude property, InstallShield does not sign any .exe files.</li> </ul>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>SignFilesInclude</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Specify the files and file patterns that you want to be digitally signed at build time. Note the following guidelines:</p> <ul style="list-style-type: none"> <li>● To indicate a wild-card character, use an asterisk (*). For example, if you want to sign all .exe files, specify the following: <b>*.exe</b></li> </ul> <p>Using wild-card characters is especially helpful if you include dynamically linked files in your project and you want to sign all files that match a certain pattern.</p> <ul style="list-style-type: none"> <li>● Put each file and each file pattern on its own line, with each separated by a carriage return.</li> <li>● Note that the files and file patterns that should not be signed override any files and file patterns that should be signed. For example, if you specify <b>*.exe</b> for the SignFilesInclude property and the SignFilesExclude property, InstallShield does not sign any .exe files.</li> </ul>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>SignFilesInPlace</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>Specify whether you want InstallShield to sign your original files or just the files that are built into the release:</p> <ul style="list-style-type: none"> <li>● <b>False</b>—InstallShield signs a temporary copy of each file and then uses that signed temporary copy to build a release. Note that with this behavior, InstallShield will not modify or sign your original files.</li> <li>● <b>True</b>—If you want InstallShield to sign your original files, set this property to True.</li> </ul> <p>The default value of this property is set to False.</p> <p>The benefit of specifying True for a Basic MSI or InstallScript MSI project is that it helps create one patch that updates both compressed and uncompressed versions of a release that contains originally unsigned files.</p>
<b>SignLauncher</b>	Basic MSI, InstallScript MSI	Read-Write Property	Set this property to True to digitally sign your Setup.exe file.
<b>SignMedia</b>	This varies. (To learn more, see <a href="#">SignMedia</a> .)	Read-Write Property	Set this property to indicate whether to digitally sign your media, and if so, which files should be signed.

Table 94 • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>SignSignedFiles</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	<p>If any of the files in your project are already digitally signed, specify whether you want InstallShield to replace those existing digital signatures with the digital signature that you specify through the DigitalCertificateInfo property:</p> <ul style="list-style-type: none"> <li>● <b>True</b>—Use the digital signature information that you are providing through the DigitalCertificateInfo property instead of any existing digital signature information that is already included with the file.</li> <li>● <b>False</b>—Leave the existing digital signature information intact for any files that are already signed. This is the default value.</li> </ul> <p>Note that this affects only files that meet the requirements that are specified in the SignFilesInclude and SignFilesExclude properties.</p>
<b>SingleEXEFileName</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Single Exe File Name setting, which specifies the file name (including extension) of a self-extracting executable file that runs the installation. If the property's value is null, no self-extracting executable file is created.
<b>SingleEXEIconName</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Single Exe Icon File setting, which specifies the fully qualified name of the file from which the executable file's icon is taken at build time. If the property's value is null, a default icon is used.
<b>SkinName</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Specify Skin setting, which specifies the dialog box skin that is applied to this release. This property is applicable only if the UseProjectSkin property is set to True.

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>SmallInitializationDialog</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Property	Set this property to display a small initialization dialog when the end user runs this release.
<b>SupportedLangsData</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets a list of language IDs that determines which components are included in the release. Only language-independent components and components of the specified languages are built into the release if the FilterLangs property is set to True.</p> <p>Use the decimal value of the language ID and separate multiple language with a comma.</p>
<b>SupportedLangsUI</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	Gets or sets a comma-delimited string of decimal language IDs that determines the release languages.
<b>SupportedVersions</b>	InstallScript, InstallScript Object	Read-Write Property	Gets or sets the release's Supported Version(s) property, which specifies a semicolon-delimited list of version numbers (for example, 1.2.3;1.2.4) of the earlier versions of your product to which this release can be applied as an update. If you leave this field blank, the setup can be run on a system on which any earlier version, or no version, of your product is currently installed. This property is applicable only if the EnableDifference property is set to False.
<b>SuppressLauncherWarning</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>If the Windows Installer service cannot be installed or updated on a target system, the setup program displays a warning if this property is set to False. Set this to True to suppress the warning.</p> <p>This property applies only if you create a Setup.exe to launch your package.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>TargetOS</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Gets or sets a value that determines which platform version of Windows Installer should be included in the release. Specify one of the following values:</p> <ul style="list-style-type: none"> <li>● <b>osNone (0)</b>—Do not include Windows Installer.</li> <li>● <b>osWin9x (1)</b>—Include only the Windows 9x version of InstMsi.exe.</li> <li>● <b>osWinNT (2)</b>—Include only the Windows NT version of InstMsi.exe.</li> <li>● <b>os9xNT (3)</b>—Include both the Windows NT and Windows 9x versions of InstMsi.exe.</li> </ul> <p>The <b>SetupEXE property</b> and the TargetOS property correspond with the Setup Launcher setting on the <b>Setup.exe tab</b> in the Releases view.</p>  <p><b>Note</b> • This setting applies to redistributables for Windows Installer 3.1 and earlier. For information on Windows Installer 4.5 redistributables, see <a href="#">Adding Windows Installer Redistributables to Projects</a>. Note that Windows Installer 4.0 is not available as a redistributable.</p>
<b>URLForYourFiles</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Specifies the directory from where your data cabinet files will be downloaded. This property accepts a URL in the form <b>http://www.yourcompany.com/download</b>.</p> <p>This property is used only if the WebType property for the current release is set to ewtDownloader (0) (Downloader) or ewtIFTW (1) (Install from the Web).</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>UseMyVersionInfo</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Set this property to True to override the default InstallShield copyright information for Setup.exe. You can specify your copyright information in the LauncherCopyright property.</p> <p>This property is applicable only to releases that meet the following criteria:</p> <ul style="list-style-type: none"> <li>• Single-file Setup.exe</li> <li>• Compressed files</li> <li>• Network image media type</li> </ul>
<b>UsePathVariableTestValues</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	Read-Write Property	If you used test values for any of your path variables, set this property to True to set those variables to their actual values at this time.
<b>UseProjectSkin</b>	InstallScript, InstallScript Object	Read-Write Property	This Boolean property gets or sets whether the release's Specify Skin property is set to Use Project Setting, which uses the skin that is selected in the Dialogs view's Skins folder.
<b>VMConfig</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write String Property	 <p><b>Edition</b> • This property is available in the Premier edition of InstallShield.</p> <p>Gets or sets the name of the group of VM configuration settings that you want to use when distributing the selected release to a VM.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

Table 94 ■ ISWiRelease Object Members (cont.)

Name	Project	Type	Description
VMMachinePassword	Basic MSI, InstallScript, InstallScript MSI	Read-Write String Property	 <p><b>Edition</b> ■ This property is available in the Premier edition of InstallShield.</p> <p>If a password is specified for the VM configuration that is selected through the VMConfig property, that password is considered to be the default value for the VMMachinePassword property. To override the password for the selected release, set the VMMachinePassword property.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>
VMMachineUserName	Basic MSI, InstallScript, InstallScript MSI	Read-Write String Property	 <p><b>Edition</b> ■ This property is available in the Premier edition of InstallShield.</p> <p>If a user name is specified for the VM configuration that is selected through the VMConfig property, that user name is considered to be the default value for the VMMachineUserName property. To override the user name for the selected release, set the VMMachineUserName property.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
VMSnapShot	Basic MSI, InstallScript, InstallScript MSI	Read-Write String Property	 <p><b>Edition</b> - This property is available in the Premier edition of InstallShield.</p> <p>Optionally gets or sets the name of the snapshot that you want to use for distributing the release.</p> <p>If a snapshot is specified for the VM configuration that is selected through the VMConfig property, the name of that snapshot is considered to be the default value for the VMSnapShot property.</p> <p>If no snapshot is specified for the VM configuration, InstallShield does not revert to a specific snapshot. InstallShield powers on the VM without reverting it to a specific snapshot, and copies your installation to the VM.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

Table 94 • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>VMStageMachineCopyPath</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write String Property	 <p><b>Edition</b> ▪ This property is available in the Premier edition of InstallShield.</p> <p>The copy path identifies the location on the VM where the release is to be distributed. The last subfolder in the path can be a path that InstallShield creates on the VM; the other folders in the path must already exist.</p> <p>If a destination path is specified for the VM configuration that is selected through the VMConfig property, that destination path is considered to be the default value for the VMStageMachineCopyPath property. To override the destination path for the selected release, set the VMStageMachineCopyPath property.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>
<b>VMStagePostBuild</b>	Basic MSI, InstallScript, InstallScript MSI	Read-Write Boolean Property	 <p><b>Edition</b> ▪ This property is available in the Premier edition of InstallShield.</p> <p>Specify whether you want InstallShield to automatically distribute the selected release each time that it is successfully built. Distributing the release to the VM involves the following tasks:</p> <ol style="list-style-type: none"> <li>1. Revert the VM to the designated snapshot (if one is specified).</li> <li>2. Power on the VM.</li> <li>3. Copy the built release to the VM to make it available for testing.</li> </ol> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>WebCreateDefaultPage</b>	InstallScript	Read-Write Property	This Boolean property gets or sets the release's Create Default Web Page setting, which specifies whether InstallShield should create a default Web page (.htm file) and place it in the Disk1 folder.
<b>WebPageUrl</b>	InstallScript	Read-Write Property	<p>Gets or sets the release's Web Page URL setting, which specifies the location of the Web page that should be launched if you click the Run From Web command on the Build menu in InstallShield:</p> <p>If nothing is entered for this property, InstallShield creates a Setup.htm file at build time and places it in the Disk1 folder.</p> <p>If you do enter a URL for this property, do not include the name of the page, and do not include an ending forward slash. For example, if the full URL for the Setup.htm file is <b>http://www.mypages.com/setup/Setup.htm</b>, enter the following as the Web page URL: <b>http://www.mypages.com/setup</b></p> <p>When you click the Run from Web command on the Build menu, InstallShield launches the appropriate URL (<b>http://www.mypages.com/setup/Setup.htm</b>, in the aforementioned example).</p>

Table 94 • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>WebType</b>	Basic MSI, InstallScript MSI	Read-Write Property	<p>Indicates the configuration of your Web installation setup package. Set this property to one of the following:</p> <ul style="list-style-type: none"> <li>● <b>ewtDownloader (0)</b>—Downloader. Builds this release as a combination of Setup.exe and your MSI package, where the end user downloads and launches Setup.exe, which in turn downloads and runs the MSI database, which contains all of your files.</li> <li>● <b>ewtIFTW (1)</b>—Install from the Web. Builds this release as a combination of Setup.exe, your MSI database, and external cabinet (.cab) files. The end user downloads and runs Setup.exe, which in turn downloads and runs the MSI database. Based on the end user's setup type and feature selections, only the requested CAB files are downloaded and installed to minimize download time.  Application maintenance and repair use the URL specified in the URLForYourFiles property as the installation source.</li> <li>● <b>ewtOneExe (2)</b>—One executable. Builds this release as a single self-extracting Setup.exe. This setting is ideal for a package that is to be downloaded from many Web or FTP sites, since the installation package is self-contained. Note that the entire installation package is downloaded, so the download time is greater than the ewtIFTW (1) (Install from the Web) setting.</li> </ul>

**Table 94** • ISWiRelease Object Members (cont.)

Name	Project	Type	Description
<b>WrapMSIIntoCab</b>	Basic MSI, InstallScript MSI	Read-Write Property	Specifies whether to place the release's MSI database inside a cabinet (.cab) file.  This property applies only if the WebType property for the current release is set to ewtDownloader (0) (Downloader).

## Example

The following lines of Visual Basic demonstrate opening a project and showing a message box of several of a release's properties:

```
Dim pProject As ISWiProject

Set pProject = New ISWiProject
pProject.OpenProject "C:\MySetups\Commercial.ism", True

Dim pProdConfig As ISWiProductConfig
Set pProdConfig = pProject.ISWiProductConfigs.Item("Version 1")
' In an InstallScript project, there is only one element
' in ISWiProductConfigs, which is named "Media".

Dim pRelease As ISWiRelease
Set pRelease = pProdConfig.ISWiReleases.Item("NewRelease1")

Dim sProps As String
sProps = pRelease.Name & " has these properties:" & vbNewLine
sProps = sProps & "Build Location: " & pRelease.BuildLocation & vbNewLine
sProps = sProps & "Compressed: " & pRelease.Compressed & vbNewLine
sProps = sProps & "Default Language: " & pRelease.DefaultLang & vbNewLine
sProps = sProps & "Setup.exe: " & pRelease.SetupEXE

MsgBox sProps

pProject.CloseProject
```

## Build Status Events

The ISWiRelease object raises the following status events:

- Public Event ProgressIncrement(ByVal lIncrement As Long, pbCancel As Boolean)
- Public Event ProgressMax(ByVal lMax As Long, pbCancel As Boolean)
- Public Event StatusMessage(ByVal sMessage As String, pbCancel As Boolean)

These events are raised during the build process and provide status updates. You can set pbCancel to stop the build. For sample code that demonstrates how to use these events, see [Using Build Status Events](#).

## Build Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Call the Build method to build the current release. This is a full and complete rebuild of your release.

### Syntax

Build()

### Applies To

- ISWiRelease

## BuildTablesOnly Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI
- Merge Module

Call the BuildTablesOnly method to build only the Windows Installer tables of the current release.

**Note** ▪ If you have not built this setup already, a new .msi file is created, but no files are added to your setup. If you have built your setup already, the .msi file is updated when all the tables are built, but no files are transferred.

### Syntax

BuildTablesOnly ()

### Applies To

- ISWiRelease

## BuildTablesRefreshFiles Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the BuildTablesOnly method to rebuild your MSI file and update the Files table, including any new or changed files in your installation.

**Note** ▪ Changed files are updated only if the size or time stamp differs from the copy already included in the build. References to deleted files are removed from the setup, but the file remains in the build location. This type of build can be run only after a complete build has been performed, and it works only when the media is an uncompressed network image.

## Syntax

BuildTablesRefreshFiles ()

## Applies To

- ISWiRelease

## CubFile Property

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI
- Merge Module

CubFile is a read-write property which you must specify prior to ISWiRelease.Build. This is a build option which is the same as building a release at the command line using ISCmdBld.exe.

The string parameter associated with this property is .cub file name.

## Applies To

- ISWiRelease

## SignMedia Property

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- Merge Module

Project-specific differences are noted where appropriate.

The ISWiRelease.SignMedia property enables you to indicate whether to digitally sign your media, and if so, which files should be signed.

The following table lists the four states that can be assigned or retrieved from the ISWiRelease.SignMedia property.

**Table 95** • ISWiRelease.SignMedia Property Values

Return Value	Type	Description
<b>esBoth (3)</b>	Read-Write Property	For Basic MSI and InstallScript MSI projects: Sign the Windows Installer package (.msi file) and Setup.exe.  For InstallScript projects: Sign both the media header file (Data1.hdr) and Setup.exe.
<b>esMsi (2)</b>	Read-Write Property	For Basic MSI, InstallScript MSI, and Merge Module projects: Digitally sign only the Windows Installer package (.msi file or .msm file).  For InstallScript projects: Sign the media header file (Data1.hdr).
<b>esNone (4)</b>	Read-Write Property	For Basic MSI, InstallScript, and InstallScript MSI projects: None of the media files (Setup.exe, Windows Installer package, or the header file) are signed at build time.
<b>esSetupExe (1)</b>	Read-Write Property	For Basic MSI, InstallScript, and InstallScript MSI projects: Digitally sign only Setup.exe.

## Applies To

- [ISWiRelease Object](#)

## ISWiRemoveFile Object

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

ISWiRemoveFile represents a file or folder removal entry in the InstallShield user interface. To retrieve a file or folder removal entry, specify an item in the ISWiRemoveFiles collection.

## Members

**Table 96** • ISWiRemoveFile Object Members

Name	Type	Description
<b>FileKey</b>	Read-Write Property	Gets or sets the FileKey property for this file or folder removal entry.
<b>FileName</b>	Read-Write Property	Gets or sets the FileName property for this file or folder removal entry.
<b>DirProperty</b>	Read-Write Property	Gets or sets the DirProperty property for this file or folder removal entry.
<b>InstallMode</b>	Read-Write Property	<p>Gets or sets the InstallMode property for this file or folder removal entry. Specify one of the following types:</p> <ul style="list-style-type: none"> <li>• <b>erfimOnInstall (1)</b>—Remove the file or folder only when the associated component is being installed.</li> <li>• <b>erfimOnUninstall (2)</b>—Remove the file or folder only when the associated component is being removed.</li> <li>• <b>erfimOnBoth (3)</b>—Remove the file or folder when the associated component is being installed or removed.</li> </ul>

## ISWiSequenceRecord Object

**Project** • This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

ISWiSequenceRecord represents an action in the Custom Actions and Sequences view of the InstallShield user interface.

## Members

**Table 97** ■ ISWiSequenceRecord Object Members

Name	Type	Description
<b>Name</b>	Read-Write Property	Holds the string name of the specified action.
<b>Comment</b>	Read-Write Property	Gets or sets comments for the specified action.
<b>Condition</b>	Read-Write Property	Gets or sets the condition for the specified action.
<b>Sequence</b>	Read-Write Property	Gets or sets the sequence number for the specified action.

## Example

The following VBScript code displays the sequence number of the LaunchConditions action in the project's Installation User Interface sequence.

```
Set oISM = CreateObject("IsWiAutoAutomation Interface Version.ISWiProject")

oISM.OpenProject "C:\MySetups\MyProject.ism", True ' open read-only

Set oSequenceRecord = oISM.InstallUISequence("LaunchConditions")

MsgBox "LaunchConditions is at sequence number " & oSequenceRecord.Sequence

oISM.CloseProject
```

## Applies To

- [ISWiSequence](#)

## ISWiSetupFile Object

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*

ISWiSetupFile represents a support file in your project. The support file can be an existing one from the Support Files view (or the Support Files/Billboards view) in InstallShield or one that is added by calling [AddSetupFile](#).

Use the project's [ISWiSetupFiles](#) collection to access a specific support file. You must specify either an index number or the file key for the Item property of ISWiSetupFiles.

## Members

**Table 98** • ISWiSetupFile Object Members

Name	Type	Description
<b>FileName</b>	Read-Only Property	Gets the name of the support file (without the path).
<b>Language</b>	Read-Write Property	Gets the string that identifies the language identifier for the support file; for example:  <code>m_pFile.Language = "1033"</code>
<b>Path</b>	Read-Only Property	Gets the fully qualified path (including the file name) of the support file's source location. Any path variables are resolved to the actual path.
<b>Splash</b>	Read-Write Property	Specifies whether this support file is a splash screen (True) or not (False).
<b>Target</b>	Read-Write Property	Gets or sets the support file's target directory within SUPPORTDIR. The following line specifies the support file to be stored in the MyFolder1\MyFolder2 folder under SUPPORTDIR:  <code>m_pFile.Target = "MyFolder1\MyFolder2"</code>

## Example

The file key is visible in the IDE only as the first entry in the Direct Editor view's ISSetupFile table. Instead of using the file key, you could write code similar to the following example to check for a certain file name:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pSetupFile As ISWiSetupFile

For Each pSetupFile In pProj.ISWiSetupFiles
    If UCase(pSetupFile.FileName) = "MYSUPPORTFILE.EXT" Then
        Exit For
    End If
Next

pProj.SaveProject
pProj.CloseProject
```

If the file name MySupportFile.ext is found among the project's setup files, the For loop ends, and pSetupFile holds a copy of the ISWiSetupFile object for MySupportFile.ext.

## ISWiSetupType Object

**Project** • This information applies to the following project types:

- *InstallScript*
- *InstallScript MSI*

ISWiSetupType represents a setup type belonging to your project. The setup type can be an existing one from the Setup Types view in the InstallShield user interface or one added by calling [AddSetupType](#).

Use the project's [ISWiSetupTypes](#) collection to access a specific setup type. You must specify either an index number or the setup type name for the Item property of ISWiSetupFiles. The setup type name is visible in the IDE in the Setup Types view's tree control.

## Members

**Table 99** • ISWiSetupType Object Members

Name	Type	Description
<b>Name</b>	Read-Only Property	Stores the name of the setup type.
<b>Description</b>	Read-Write Property	This string property specifies the setup type's description. (This description is displayed to end users during the installation process only if you call SdSetupTypeEx in your script.)
<b>DisplayName</b>	Read-Write Property	This string property specifies the name of this setup type as you would like it displayed to your users.

## Example

The following Visual Basic code illustrates how you would set a property for a specific setup type:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pSetupType As ISWiSetupType

Set pSetupType = pProj.ISWiSetupTypes("CSSaveSpace")
pSetupType.DisplayName = "Client Setup - Save Space"

pProj.SaveProject
pProj.CloseProject
```

## ISWiShellProperty Object

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

The ISWiShellProperty object represents a shortcut property that you want the Windows Shell to set. The properties that the Shell can set are defined in propkey.h, which is part of the Windows SDK.

## Members

**Table 100** ■ ISWiShellProperty Object Members

Name	Type	Description
<b>Name</b>	Read-Write Property	Retrieves or sets the primary key name for a Shell property that is specified in the MsiShortcutProperty table.
<b>PropertyName</b>	Read-Write Property	Retrieves or sets a Shell property. The properties are defined in propkey.h, which is part of the Windows SDK.  PropertyName typically consists of a GUID and a property ID; for example:  <b>{9F4C2855-9F79-4B39-A8D0-E1D42DE1D5F3}, 9</b>
<b>PropertyValue</b>	Read-Write Property	Retrieves or sets a string value for the property.

## ISWiShortcut Object

**Project** ■ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- Merge Module

Project-specific differences are noted where appropriate.

The ISWiShortcut object represents a shortcut in the Shortcuts explorer. The shortcut can be an existing item in an [ISWiShortcuts](#) collection or one you just created by calling [AddShortcut](#).

Use this object's properties to set the shortcut's attributes in much the same manner as you would in the IDE.

## Members

**Table 101** ■ ISWiShortcut Object Members

Name	Project	Type	Description
<b>AddShellProperty</b>	Basic MSI, InstallScript MSI, Merge Module	Method	Adds a Shell property for the current shortcut object.
<b>Arguments</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Gets or sets the command-line arguments that will be passed to the target file. You can substitute "%1" for the file name. The following statement might launch the target file in silent mode:  <code>m_pShortcut.Arguments = "-s"</code>
<b>DeleteShellProperty</b>	Basic MSI, InstallScript MSI, Merge Module	Method	Deletes the specified Shell property from the current shortcut object.
<b>Description</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Contains any descriptive text you have entered for this shortcut. The description is displayed as a tooltip. If this property uses a string entry, Description gives you the value for the string entry identified by the ActiveLanguage property of <a href="#">ISWiProject</a> .
<b>DisplayName</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Contains the display name you have entered for this shortcut. This name is a localizable value that will be used for the shortcut's name when it is installed instead of the name that identifies the shortcut in the Shortcuts explorer. If this property uses a string entry, DisplayName gives you the value for the string identified by the ActiveLanguage property of <a href="#">ISWiProject</a> .

**Table 101** ■ ISWiShortcut Object Members (cont.)

Name	Project	Type	Description
<b>DoNotHighlightAsNew</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets a Boolean property that indicates whether the shortcut is configured to be highlighted on the Start menu as new after end users install the product. This has the same effect as clearing the <b>Highlight newly installed programs</b> check box in the Customize Start Menu dialog box for an individual item on a target system.</p> <p>To prevent the Start menu shortcut from being highlighted as newly installed, set this Boolean property to True. To enable the shortcut to be highlighted, set this Boolean property to False.</p> <p>For more information about this highlight functionality, see <a href="#">Preventing a Shortcut on the Start Menu from Being Highlighted as Newly Installed</a>.</p>
<b>EnableWin8StartPin</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets a Boolean property that indicates whether the shortcut is configured to be pinned by default to the Start screen on Windows 8 target systems.</p> <p>To pin the shortcut by default, set this Boolean property to True. To disable pinning, set this Boolean property to False.</p> <p>For more information about this pinning functionality, see <a href="#">Suppressing Initial Pinning of a Shortcut to the Windows 8 Start Screen</a>.</p>
<b>HotKey</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Stores the accelerator key for this shortcut as a Long.

**Table 101** ■ ISWiShortcut Object Members (cont.)

Name	Project	Type	Description
<b>IconFile</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Enter the fully qualified path to the file that contains the icon for this shortcut. You must specify either an executable file that contains the icon resource or an .ico file. (Windows Installer based projects only:) If you leave this property blank, the key file of the component will automatically be set as the shortcut's icon.</p> <p>Because Windows Installer requires a separate icon when the component is advertised, InstallShield extracts the icon from the executable you specify. You must set the IconIndex property if there is more than one icon resource in the executable.</p>
<b>IconIndex</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Contains the index for the specified icon as a Long if there is more than one icon resource in IconFile.</p> <p>A nonnegative integer refers to the order of the icon resources in the executable. For example, 0 is for the first icon in the file, 1 for the second, 2 for the third, and so on. Use a negative number to refer to a specific resource ID. For example, the icon index -12 points to the icon with a resource ID of 12.</p>
<b>InternetShortcut</b>	InstallScript	Read-Write Property	Gets or sets the Internet Shortcut property for this shortcut, which specifies whether the shortcut is an Internet shortcut that points to the Uniform Resource Locator (URL) specified in the shortcut's Target property. This property is Boolean.
<b>ISWiShellProperties</b>	Basic MSI, DIM, InstallScript MSI, Merge Module	Collection	Contains all of the Shell properties for the current shortcut object.
<b>Name</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Only Property	Retrieves the name of the shortcut. This is the same name that appears in the Shortcuts explorer; do not confuse it with the shortcut's Display Name property.

**Table 101** ■ ISWiShortcut Object Members (cont.)

Name	Project	Type	Description
<b>PreventPinning</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Gets or sets a Boolean property that indicates whether you want the context menu commands for pinning a shortcut to the taskbar and to the Start menu to be displayed after end users install your product.</p> <p>To hide the context menu commands for pinning the shortcut to the taskbar or Start menu, set this Boolean property to True. To display the context menu commands and allowing pinning, set this Boolean property to False.</p> <p>For more information about this pinning functionality, see <a href="#">Specifying Whether End Users Should Be Able to Pin a Shortcut to the Taskbar or Start Menu</a>.</p>
<b>ReplaceExistingIfFound</b>	InstallScript	Read-Write Property	<p>Gets or sets the Replace Existing (If Found) setting for this shortcut, which specifies whether the shortcut should replace an already existing shortcut with the same display name in the same location on the target system. This property is Boolean.</p>
<b>ShowCmd</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Specify one of the following options for determining what mode the file is opened with:</p> <ul style="list-style-type: none"> <li>● <b>scNormal (1)</b>—The program launches in a normal-sized window.</li> <li>● <b>scMaximized (3)</b>—The program launches in full-screen view.</li> <li>● <b>scMinNoActive (7)</b>—The program launches in a minimized window, visible only on the taskbar.</li> </ul>
<b>Target</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	<p>Provide the path and file name for this shortcut's target file. Instead of hard-coding a path, you can use a Windows Installer directory property in square brackets—for example, [INSTALLDIR]MyApp.exe—or, in an InstallScript project, a system variable in angle brackets—&lt;TARGETDIR&gt;\MyApp.exe.</p> <p>(Windows Installer based projects only:) If you leave this property blank, the key file of this component will automatically be set as the shortcut's target.</p>

**Table 101** ■ ISWiShortcut Object Members (cont.)

Name	Project	Type	Description
<b>Uninstall</b>	InstallScript	Read-Write Property	Gets or sets the Uninstall property for this shortcut, which specifies whether the shortcut is removed when the application is uninstalled. This property is Boolean.
<b>UserType</b>	InstallScript	Read-Write Property	<p>Gets or sets the Type property for this shortcut, which specifies whether you want the shortcut to appear in the list of personal shortcuts for the user installing your application, in the list of shortcuts that are common to all users, or if you would like the setup to decide automatically based on the value of the ALLUSERS system variable. Specify one of the following options for determining what mode the file is opened with:</p> <ul style="list-style-type: none"> <li>● <b>estAutomatic (0)</b>—The shortcut appears in the list of common shortcuts if ALLUSERS is non-zero, or in the list of personal shortcuts if ALLUSERS is FALSE.</li> <li>● <b>estCommon (1)</b>—The shortcut appears in the list of shortcuts that are common to all users.</li> <li>● <b>estPersonal (2)</b>—The shortcut appears in the list of personal shortcuts for the user installing your application.</li> </ul>
<b>WorkingDirectory</b>	Basic MSI, InstallScript, InstallScript MSI, Merge Module	Read-Write Property	Specify the string that becomes the shortcut's "start in" folder. Instead of hard-coding a path, you can use a Windows Installer directory property in square brackets—for example, [INSTALLDIR]MyApp.exe—or, in an InstallScript project, a system variable in angle brackets—<TARGETDIR>\MyApp.exe.

### Applies To

- ISWiFolder

## AddShellProperty Method

**Project** ■ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI

- *Merge Module*

The AddShellProperty method adds a Shell property for the current shortcut object. The properties that the Shell can set are defined in propkey.h, which is part of the Windows SDK.

For more information on setting Shell properties for a shortcut, see [Setting Custom Shell Properties](#).

## Syntax

```
Function AddShellProperty (sName As String) As ISWiShellProperty
```

## Parameters

**Table 102** ▪ AddShellProperty Method Parameters

Parameter	Description
<b>sName</b>	Pass a string to specify the name of a Shell property that you want to add to the shortcut.

## Return Values

The AddShellProperty method returns an ISWiShellProperty object.

## Example

The following sample VBScript snippet adds a Shell property to a shortcut:

```
Dim pShellProperty As ISWiShellProperty
Set pShellProperty = pShortcut.AddShellProperty("MyShellProperty")
```

## Applies To

- [ISWiShortcut](#)

## DeleteShellProperty Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

The DeleteShellProperty method deletes the specified Shell property from the current shortcut object.

For more information on setting Shell properties for a shortcut, see [Setting Custom Shell Properties](#).

## Syntax

DeleteShellProperty (pShellProp As ISWiShellProperty) As Long

## Parameters

**Table 103** - DeleteShellProperty Method Parameters

Parameter	Description
<b>pShellProp</b>	Pass the ISWiShellProperty object to specify a Shell property that you want to remove from a shortcut.

## Example

The following sample VBScript snippet deletes all of the Shell properties from a shortcut:

```
Dim pShellProperty As ISWiShellProperty
For Each pShellProperty In pShortcut.ISWiShellProperties
    pShortcut.DeleteShellProperty pShellProperty
Next
```

## Applies To

- [ISWiShortcut](#)

# ISWiISProperty Object

**Project** - This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

ISWiISProperty represents a property in the Summary Information Stream. You can retrieve a property by specifying an item in the [ISWiISProperties](#) collection. The following Summary Information Stream property names are supported:

- Title
- Subject
- Author
- Keywords
- PackageCode
- TemplateSummary
- Comments

- Schema

Several of these properties use string entries, as required by InstallShield. In that case, they contain the value for the string identified by the ActiveLanguage property of [ISWiProject](#).

## Members

**Table 104** ■ ISWiSISProperty Object Members

Name	Type	Description
<b>Name</b>	Read-Only Property	Contains the property's name. Must be one of the existing Summary Information Stream properties listed above.
<b>Value</b>	Read-Write Property	Gets or sets the property's value.  If this property uses a string entry, Value gives you the value for the string identified by the ActiveLanguage property of <a href="#">ISWiProject</a> .

## Example

The following VBScript example sets the property Title to **Windows Installer Setup Package**:

```
Option Explicit
```

```
Dim pProject
```

```
Set pProject = CreateObject ("IswiAutoAutomation Interface Version.ISWiProject")
```

```
pProject.OpenProject "C:\MySetups\SampleProject.ism"
```

```
Dim pTitle, sTitle
```

```
sTitle = "Windows Installer Setup Package"
```

```
Set pTitle = pProject.ISWiSISProperties.Item("Title")
```

```
pTitle.Value = sTitle
```

```
pProject.SaveProject
```

```
pProject.CloseProject
```

## Applies To

- [ISWiProject](#)

## ISWiSQLConnection Object

**Project** ■ This information applies to the following project types:

- Basic MSI
- DIM

- *InstallScript*
- *InstallScript MSI*

ISWiSQLConnection represents a SQL Server connection in the SQL Scripts view of the InstallShield interface. You can retrieve an ISWiSQLConnection object by using the [ISWiSQLConnections](#) collection.

## Members

**Table 105** ▪ ISWiSQLConnection Object Members

Name	Type	Description
<b>AddSQLRequirement</b>	Method	Call the AddSQLRequirement method to target specific server versions and determine whether the SQL Server meets your application's minimum requirements.
<b>AddSQLScript</b>	Method	<p>Call the AddSQLScript method to add a new script file to a SQL connection.</p>  <p><b>Note</b> ▪ The AddSQLScript method generates the ISSQLScriptFile table key with a name such as SQLScript1, SQLScript2, or SQLScript3. If you have multiple SQL script files in your project, it may be difficult to distinguish one from the other with this naming convention. Therefore, if you want to be able to specify the key, use the <b>AddSQLScriptEx</b> method.</p>
<b>AddSQLScriptEx</b>	Method	Call the AddSQLScriptEx method to add a new script file to a SQL connection, and generate a valid name from the passed string.
<b>Authentication</b>	Read-Write Property	This string gets or sets the authentication mode when connecting to a SQL Server.
<b>Comments</b>	Read-Write Property	This string property gets or sets any internal comments you want to include within your installation project.
<b>Database</b>	Read-Write Property	This string gets or sets the database name. At runtime, the installation uses this as the default database for installing the SQL script files contained in this connection. This value can be a property. Using a property allows you to dynamically set the name of this database at runtime.
<b>DeleteSQLScript</b>	Method	Call the DeleteSQLScript method to remove a SQL script file from a SQL Connection in the InstallShield interface.
<b>GetDatabaseServer</b>	Method	The GetDatabaseServer method returns an ISWiSQLDatabaseServer object.
<b>InsertSQLScript</b>	Method	Call the InsertSQLScript method to insert an existing script file to a SQL Connection in the InstallShield interface.
<b>Name</b>	Read-Write Property	This string property gets or sets the connection name. Type an internal name used to uniquely identify this connection in the setup project.

**Table 105** ■ ISWiSQLConnection Object Members (cont.)

Name	Type	Description
<b>Order</b>	Read-Write Property	This integer property gets or sets the connection order.
<b>Password</b>	Read-Write Property	This string gets or sets the password when you choose to connect to a server using SQL Server authentication.
<b>RemoveSQLRequirement</b>	Method	Removes a specified SQL requirement from the target product.
<b>SelectDatabaseServer(Name As String) As Boolean</b>	Read-Write Property	This string gets or sets the selected database server name. At runtime, the installation will establish a connection and perform specified requirement checks on the designated database servers based on the sequence of the servers as they are listed.
<b>Server</b>	Read-Write Property	This string gets or sets the server name. At runtime, the installation uses this server name to connect to a SQL Server. This server will be used to install the SQL scripts contained within this connection. This value can be a property. Using a property allows you to dynamically set the name of this server at runtime. You must use the [Property] notation.
<b>UserName</b>	Read-Write Property	This string gets or sets the user name when you choose to connect to a server using SQL Server authentication.

### Applies To

- ISWiProject

## AddSQLRequirement Method

**Project** ■ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

The AddSQLRequirement adds a SQL requirement to the target product and returns an ISWiSQLRequirement object.

## Syntax

Function AddSQLRequirement() As ISWiSQLRequirement

## Return Values

This method returns ISWiSQLRequirement object.

## Applies To

- [ISWiSQLConnection](#)

## AddSQLScript Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the AddSQLScript method to add a new script file to a SQL connection.

**Note** ▪ The AddSQLScript method generates the ISSQLScriptFile table key with a name such as SQLScript1, SQLScript2, or SQLScript3. If you have multiple SQL script files in your project, it may be difficult to distinguish one from the other with this naming convention. Therefore, if you want to be able to specify the key, use the [AddSQLScriptEx method](#).

## Syntax

Function AddSQLScript() As ISWiSQLScript

## Return Values

This method returns an ISWiSQLScript object.

## Applies To

- [ISWiSQLConnection](#)

## AddSQLScriptEx Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM

- *InstallScript*
- *InstallScript MSI*

Call the AddSQLScriptEx method to add an ISSQLScriptFile entry to a SQL connection. This method generates a valid name from the passed string. The method ensures that the name of the entry that is being added to the ISSQLScriptFile table is unique and less than 47 characters in length.

## Syntax

```
Function AddSQLScriptEx (ByVal sCandidateName As String) As ISWiSQLScript
```

## Parameters

**Table 106** ▪ AddSQLScriptEx Method Parameters

Parameter	Description
<b>sCandidateName</b>	<p>Specifies the name of the script that you want to add to the SQL connection.</p> <p>Note that file names may contain invalid characters or may be too long for the key. However, if you pass a file name in this parameter, the AddSQLScriptEx method creates an entry with a valid key that is based on the file name; the result is the same as if you had added the SQL script to a connection in the SQL Scripts view.</p> <p>If you specify an empty string (""), the AddSQLScriptEx method generates the ISSQLScriptFile table key with a name such as SQLScript1, SQLScript2, or SQLScript3—the same as if the <a href="#">AddSQLScript method</a> was used to add the ISSQLScriptFile entry.</p>

## Return Values

This method returns an ISWiSQLScript object.

## Applies To

- [ISWiSQLConnection](#)

## DeleteSQLScript Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

Call the DeleteSQLScript method to remove a SQL script file from a SQL Connection in the InstallShield interface.

## Syntax

Function DeleteSQLScript(Script As ISWiSQLScript) As Long

## Parameters

**Table 107** ▪ DeleteSQLScript Method Parameters

Parameter	Description
<b>Script</b>	Specifies the name of the script you want to remove from the SQL connection in the InstallShield interface.

## Applies To

- [ISWiSQLConnection](#)

## GetDatabaseServer Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the GetDatabaseServer method to return an [ISWiSQLDatabaseServer](#) object.

## Syntax

Sub SetPredefinedRequirement(RHS As ISWiSQLServerVersion)

## Return Values

This method returns the [ISWiSQLDatabaseServer](#) object.

## Applies To

- [ISWiSQLConnection](#)

## InsertSQLScript Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript

- *InstallScript MSI*

Call the InsertSQLScript method to insert an existing script file to a SQL Connection in the InstallShield interface.

## Syntax

```
Function InsertSQLScript(strScriptPath As String) As ISWiSQLScript
```

## Parameters

**Table 108** ▪ InsertSQLScript Method Parameters

Parameter	Description
<b>strScriptPath</b>	Specifies the path to the script file you want to insert under the SQL Connection in the InstallShield interface.

## Return Values

This method returns ISWiSQLScript object.

## Applies To

- *ISWiSQLConnection*
- *ISWiSQLDatabaseServer*

## RemoveSQLRequirement Method

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

The RemoveSQLRequirement method removes a specified SQL requirement from the target product.

## Applies To

- *ISWiSQLConnection*

## ISWiSQLDatabaseServer Object

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*

- *InstallScript*
- *InstallScript MSI*

ISWiSQLDatabaseServer represents a database server that you can choose to target by version requirements at run time. You can retrieve an ISWiSQLDatabaseServer object by using the [ISWiSQLDatabaseServers](#) collection.

## Members

**Table 109** ■ ISWiSQLDatabaseServer Object Members

Name	Type	Description
<a href="#">InsertSQLScript</a>	Method	Call the InsertSQLScript method to insert an existing script file to a SQL Connection in the InstallShield interface.
<a href="#">ISWiSQLRequirements</a>	Collection	Returns the collection of ISWiSQLRequirements associated with this connection.
<a href="#">ISWiSQLScripts</a>	Collection	Returns the collection of ISWiSQLScripts associated with this connection.
<b>Name</b>	Read-Write Property	This string property gets or sets the connection name for the database server.
<b>Order</b>	Read-Write Property	This integer property gets or sets the connection order.
<b>Password</b>	Read-Write Property	This string gets or sets the password when you choose to connect to a server using SQL Server authentication.
<b>SelectDatabaseServer(Name As String) As Boolean</b>	Read-Write Property	This string gets or sets the selected database server name. At runtime, the installation will establish a connection and perform specified requirement checks on the designated database servers based on the sequence of the servers as they are listed.
<b>Server</b>	Read-Write Property	This string gets or sets the server name. At runtime, the installation uses this server name to connect to a SQL Server. This server will be used to install the SQL scripts contained within this connection. This value can be a property. Using a property allows you to dynamically set the name of this server at runtime. You must use the [Property] notation.
<b>UserName</b>	Read-Write Property	This string gets or sets the user name when you choose to connect to a server using SQL Server authentication.

## Applies To

- [ISWiSQLConnection](#)

## ISWiSQLReplace Object

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

ISWiSQLReplace allows you to get and set properties in the Text Replacement tab associated with a script file in the InstallShield interface. You can retrieve an ISWiSQLReplace object using the ISWiSQLReplaces collection.

### Members

**Table 110** - ISWiSQLReplace Object Members

Name	Type	Description
<b>Name</b>	Read-Write Property	This string property gets or sets the name of the SQL Script Replacement object.
<b>Search</b>	Read-Write Property	This string property gets or sets the text string you want to find.
<b>Replace</b>	Read-Write Property	This string property gets or sets the text string with which you want to replace the existing string during text replacement.
<b>MatchWholeWord</b>	Read-Write Property	This is a Boolean property. During installation, this property helps identify only whole-word matches.
<b>MatchCase</b>	Read-Write Property	This is a Boolean property. During installation, this property indicates that the case for words found during text replacement must match.
<b>ReplaceOnce</b>	Read-Write Property	This is a Boolean property. During installation, this property indicates that the string you want to search and replace with a different string should be replaced only once.
<b>PreserveCase</b>	Read-Write Property	This is a Boolean property. During installation, this property indicates that case should be preserved during text replacement.

### Applies To

- ISWiSQLScript

## ISWiSQLRequirement Object

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

ISWiSQLRequirement represents the requirements property tab for a new SQL connection in the InstallShield interface. You can retrieve the ISWiSQLRequirement object using the ISWiSQLRequirements collection.

### Members

**Table 111** - ISWiSQLRequirement Object Members

Name	Type	Description
<b>AnyGreaterServicePack</b>	Read-Write Property	This is a Boolean property. Gets or sets a limit on the ServicePackLevel requirement.
<b>AnyGreaterVersion</b>	Read-Write Property	This is a Boolean property. Gets or sets a limit on the MajorVersion requirement.
<b>Disable</b>	Read-Write Property	This Boolean property disables the SQL requirement.
<b>MajorVersion</b>	Read-Write Property	This string property gets or sets the MajorVersion requirement.
<b>Name</b>	Read-Write Property	This string property gets or sets the name of the SQL Requirement object, which is necessary for determining which SQL Server versions are supported for a connection.
<b>ServicePackLevel</b>	Read-Write Property	This string property gets or sets the ServicePackLevel requirement.
<b>SetPredefinedRequirement</b>	Method	Configures the requirement from a set of predefined values which the installation author determines.

### Applies To

- [ISWiSQLConnection](#)

## SetPredefinedRequirement Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the SetPredefinedRequirement method to specify requirements for adding a SQL connection to your installation project.

### Syntax

```
Sub SetPredefinedRequirement(RHS As ISWiSQLServerVersion)
```

### Constants

The following is a list of constants associated with the ISWiSQLServerVersion object type.

- essv2K
- essv2Ksp1
- essv2Ksp2
- essv2Ksp3
- essv65
- essv65sp1
- essv65sp2
- essv65sp3
- essv65sp4
- essv65sp5
- essv65sp5a
- essv65sp5aUpdate
- essv7
- essv7sp1
- essv7sp2
- essv7sp3
- essv7sp4

### Return Values

This method returns the ISWiSQLRequirement object.

## Applies To

- [ISWiSQLRequirement](#)

## ISWiSQLScript Object

---

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

*Project-specific differences are noted where appropriate.*

ISWiSQLScript represents a SQL script file in the SQL Scripts explorer of the SQL Scripts view in InstallShield. You can retrieve an ISWiSQLScript object by using the [ISWiSQLScripts collection](#).

## Members

**Table 112** ■ ISWiSQLScript Object Members

Name	Type	Description
<b>AddSQLScriptError</b>	Method	Creates and returns <b>ISWiSQLScriptError</b> objects.
<b>AddSQLScriptReplacement</b>	Method	Creates and returns <b>ISWiSQLReplace</b> objects.
<b>Comments</b>	Read-Write Property	This string property gets or sets any internal comments you want to include within your installation project. You can enter any notes regarding the script. These notes will be saved and used only within the installation project.
<b>Component</b>	Read-Write Property	This string property gets or sets the name of the component which is associated with the feature that is associated with the SQL script object.
<b>Condition</b>	Read-Write Property	 <p><b>Project</b> ■ This property is available for the following project types:</p> <ul style="list-style-type: none"> <li>● <b>Basic MSI</b></li> <li>● <b>DIM</b></li> <li>● <b>InstallScript MSI</b></li> </ul> <p>This property specifies the condition that is evaluated at run time to determine whether the SQL script should be run during installation or uninstallation. If the condition evaluates to true, the script is run.</p> <p>This property corresponds with the condition that is entered in the Script Condition area of the Runtime tab for a SQL script in the SQL Scripts view.</p>
<b>DeleteSQLReplace</b>	Method	Deletes an <b>ISWiSQLReplace</b> object.
<b>DeleteSQLScriptError</b>	Method	Deletes an <b>ISWiSQLScriptError</b> object.
<b>ErrorHandling</b>	Read-Write Property	<p>Gets or sets one of the following values.</p> <ul style="list-style-type: none"> <li>● <b>esehAbort (2)</b>—On error, abort the installation.</li> <li>● <b>esehGotoNextScript (0)</b>—On error, go to the next script.</li> <li>● <b>esehGotoNextStatement (1)</b>—On error, go to the next statement.</li> </ul>

**Table 112** ■ ISWiSQLScript Object Members (cont.)

Name	Type	Description
<b>FullPath</b>	Read-Write Property	This string property gets or sets the path of the .sql file associated with the SQL script object you want to execute by the installation.
<b>InstallText</b>	Read-Write Property	This string property gets or sets the status text when a script is run during install. This status text appears in the status message, which is displayed to the end-user while the script is running.
<b>ISWiSQLScriptErrors</b>	Read-Only Property	Returns the collection of <a href="#">ISWiSQLScriptErrors</a> that are associated with this SQL script.
<b>Name</b>	Read-Write Property	This string property gets or sets the name of the SQL script object that you want to execute by the installation.
<b>Order</b>	Read-Write Property	This integer property gets or sets the order of execution of the script file.
<b>RunOnInstall</b>	Read-Write Property	This Boolean property specifies whether to schedule the execution of the SQL script during installation.
<b>RunOnLogon</b>	Read-Write Property	This Boolean property specifies whether to run the selected SQL script during login. This property corresponds with the Run Script During Login check box on the Runtime tab for a SQL script in the SQL Scripts view.
<b>RunOnRollback</b>	Read-Write Property	This Boolean property specifies whether to schedule the execution of the SQL script during rollback. This property corresponds with the Run Script During Rollback check box on the Runtime tab for a SQL script in the SQL Scripts view.
<b>RunOnUninstall</b>	Read-Write Property	This Boolean property specifies whether to schedule the execution of the SQL script during uninstallation.
<b>UninstallText</b>	Read-Write Property	This string property gets or sets the status text when a script is run during uninstall. This status text appears in the status message, which is displayed to the end-user while the script is running.
<b>Version</b>	Read-Write Property	This property gets or sets the version number for the SQL script file. For more information, see <a href="#">Specifying a Version Number for a SQL Script File</a> .

## AddSQLScriptError Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the AddSQLScriptError method to add a custom error handling entry to a SQL script.

### Syntax

Function AddSQLScriptError()

### Return Values

This method returns an ISWiSQLScriptError object.

### Applies To

- ISWiSQLScript

## AddSQLScriptReplacement Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the AddSQLScriptReplacement method to specify a string and replace it with a different string in a SQL script file.

### Syntax

Function AddSQLScriptReplacement() As ISWiSQLReplace

### Return Values

This method returns the ISWiSQLReplace object.

### Applies To

- ISWiSQLScript

## DeleteSQLReplace Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the DeleteSQLReplace method to remove a text replacement entry that you have added.

### Syntax

Function DeleteSQLReplace(Replace As ISWiSQLReplace) As Long

### Applies To

- ISWiSQLScript

## DeleteSQLScriptError Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

Call the DeleteSQLScriptError method to remove a custom error handling entry that you have added.

### Syntax

Function DeleteSQLScriptError(ByVal pScriptError As ISWiSQLScriptError)

### Applies To

- ISWiSQLScript

## ISWiSQLScriptError Object

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI

ISWiSQLScriptError represents a custom error handling entry for a SQL script file in the SQL Scripts view in InstallShield. You can retrieve an ISWiSQLScriptError object by using the [ISWiSQLScriptErrors collection](#).

## Members

**Table 113** ■ ISWiSQLScriptError Object Members

Name	Type	Description
<b>ErrorHandling</b>	Read-Write Property	Gets or sets one of the following values. <ul style="list-style-type: none"> <li>● <b>esehAbort (2)</b>—On error, abort the installation.</li> <li>● <b>esehGotoNextScript (0)</b>—On error, go to the next script.</li> <li>● <b>esehGotoNextStatement (1)</b>—On error, go to the next statement.</li> </ul>
<b>ErrorNumber</b>	Read-Write Property	Gets or sets a numeric value that indicates the SQL error number for which you want to customize error handling.

## ISWiStringEntry Object

**Project** ■ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

The ISWiStringEntry object represents a string entry for a specific language.

## Members

**Table 114** ▪ ISWiStringEntry Object Members

Name	Type	Description
<b>Id</b>	Read-Write Property	Gets or sets the language-independent identifier for the string. Each string identifier in a project is linked to one or more values.
<b>Value</b>	Read-Write Property	Gets or sets the run-time string.
<b>Comment</b>	Read-Write Property	Gets or sets an internal note about the string entry.

## Applies To

- [ISWiLanguage](#)

## ISWiUpgradeTableEntry Object

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

ISWiUpgradeTableEntry represents an upgrade item in the Upgrades view of InstallShield. You can retrieve an upgrade item by specifying an item in the [ISWiUpgradeTableEntries](#) collection.

## Members

**Table 115** ▪ ISWiUpgradeTableEntry Object Members

Name	Type	Description
<b>Delete</b>	Method	Deletes the StaticUpgradeEntry from the project file.
<b>DisplayName</b>	Read-Write Property	Gets or sets the name of the upgrade entry. This is the internal name that is displayed for an upgrade item in the Upgrades view.
<b>UpgradeCode</b>	Read-Write Property	Gets or sets the upgrade table entry's Upgrade Code. The upgrade code is a GUID representing a related set of products. It is used in the Upgrade Table to search for related versions of the product that are already installed.
<b>VersionMin</b>	Read-Write Property	Specifies the lower bound of the range of product versions detected by FindRelatedProducts.
<b>VersionMax</b>	Read-Write Property	Specifies the upper boundary of the range of product versions detected by FindRelatedProducts.
<b>Language</b>	Read-Write Property	Specifies the set of languages detected by FindRelatedProducts. Enter a list of numeric language identifiers (LANGID) separated by commas.
<b>Attributes</b>	Read-Write Property	Contains the bit flags specifying attributes of the Upgrade table.
<b>Remove</b>	Read-Write Property	The formatted string entered for this property must evaluate to a comma-delimited list of feature names.
<b>ActionProperty</b>	Read-Write Property	When the FindRelatedProducts action detects a related product installed on the system, it appends the product code to the property specified in this field.

## Applies To

- ISWiProject

## Delete Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the Delete method to remove the StaticUpgradeEntry from the project file.

## Syntax

Delete()

## Applies To

- ISWiUpgradeTableEntry

# Automation Collections

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

Each InstallShield automation collection is a set of objects. For example, the ISWiFeatures collection is a set of ISWiFeature objects in the current project. This section describes each of the InstallShield automation collections.

## ISWiAdvancedFiles Collection

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object

ISWiSAdvancedFiles is a collection that contains every advanced file (as an [ISWiAdvancedFile](#) object) in your project. For example, the following Visual Basic code illustrates how you would set a property for a specific advanced file:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"

pProj.ISWiAdvancedFiles(1).Disk = edtOther

pProj.SaveProject
pProj.CloseProject
```

## Members

**Table 116** ■ ISWiAdvancedFiles Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of advanced files in the ISWiAdvancedFiles collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the advanced file to retrieve the <a href="#">ISWiAdvancedFile</a> object. For example, the following statements create references to the first advanced file in the collection and the advanced file named CSSaveSpace:</p> <pre>Set pSetupFile1 = pProj.ISWiAdvancedFiles.Item(1) Set pSetupFile2 = pProj.ISWiAdvancedFiles.Item("CSSaveSpace")</pre> <p>Item is the default property for ISWiAdvancedFiles, which means that <code>pProj.ISWiAdvancedFiles.Item("CSSaveSpace")</code> is equivalent to <code>pProj.ISWiAdvancedFiles("CSSaveSpace")</code>.</p>

## Applies To

- [ISWiProject](#)

## ISWiAutomaticUpgradeEntries Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

ISWiAutomaticUpgradeEntries returns a collection of [ISWiAutomaticUpgradeEntry](#) items as they are defined in the IDE.

## Members

**Table 117** ▪ ISWiAutomaticUpgradeEntries Collection Members

Property	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiAutomaticUpgradeEntries collection.
<b>Item</b>	Read-Only Property	Provide the index number or upgrade code in order to retrieve the ISWiAutomaticUpgradeEntries items.  Item is the default property for ISWiAutomaticUpgradeEntries, which means that <code>m_ISWiProject.ISWiAutomaticUpgradeEntries.Item("12345678-1234-1234-1234-123456789012")</code> is equivalent to <code>m_ISWiProject.ISWiAutomaticUpgradeEntries("12345678-1234-1234-1234-123456789012")</code> .

## Example

```
Dim m_ISWiProj As ISWiProject
Dim m_AutomaticUpgradeEntries As ISWiAutomaticUpgradeEntries

Set m_ISWiProj = New ISWiProject
m_ISWiProj.OpenProject "C:\mysetups\build 34.ism"

For Each m_AutomaticUpgradeEntries In m_ISWiProject.ISWiAutomaticUpgradeEntries
    m_AutomaticUpgradeEntries.Name = "Upgrade Msi Item1"
Next

m_ISWiProj.SaveProject
m_ISWiProj.CloseProject
```

The following line illustrates how to access a particular automatic upgrade entry:

```
Set m_AutomaticUpgradeEntries = ISWiProject.ISWiAutomaticUpgradeEntries ("Upgrade Msi Item1")
```

## Applies To

- **ISWiProject**

## ISWiComponents Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*

- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

*Project-specific differences are noted where appropriate.*

The ISWiComponents collection contains all of the components associated with a specified feature. ISWiComponents provides an interface for enumerating all of the components in a feature. When ISWiComponents is a member of ISWiProject, it contains all of the components in the project, not just those belonging to a specified feature.

## Members

**Table 118** ■ ISWiComponents Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiComponents collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the component in order to retrieve the <b>ISWiComponent</b> object.</p> <p>The name of the component is case-sensitive—for example, “Help_Files” and “Help_files” are two different components.</p> <p>Item is the default property for ISWiComponents, which means that <code>m_ISWiFeature.ISWiComponents.Item("Help_Files")</code> is equivalent to <code>m_ISWiFeature.ISWiComponents("Help_Files")</code>.</p>

## Examples

The following Visual Basic code opens a project, loops through each component in the feature NewFeature1, sets the RemoteInstallation property for each component to run from source, and finally saves and closes the project.

```
Dim m_ISWiProj As ISWiProject
Dim m_Feature As ISWiFeature
Dim m_Comp As ISWiComponent

Set m_ISWiProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
m_ISWiProj.OpenProject "C:\mysetups\build 34.ism"

Set m_Feature = m_ISWiProj.ISWiFeatures("NewFeature1")

If Not m_Feature Is Nothing Then
    For Each m_Comp In m_Feature.ISWiComponents
        m_Comp.RemoteInstallation = rfsSource
    Next
EndIf
```

```
m_ISWiProj.SaveProject
m_ISWiProj.CloseProject
```

The following line illustrates how to access a particular component:

```
Set m_Comp = m_ISWiProj.ISWiFeatures("MyFeature").ISWiComponents("MyComponent")
```

## Applies To

- ISWiFeature
- ISWiProject

## ISWiComponentSubFolders Collection

**Project** ▪ This information applies to the following project types:

- InstallScript
- InstallScript Object

ISWiComponentSubFolders is a collection that contains every component subfolder (as an [ISWiComponentSubFolder](#) object) in the current component or component subfolder. For example, the following Visual Basic code illustrates how you would apply a method to a specific component subfolder:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pComponent As ISWiComponent

Set pFeature = pProj.ISWiFeatures.Item("MyFeature")
Set pComponent = pFeature.ISWiComponents.Item("MyComp")
pComponent.ISWiComponentSubFolders.Item("MyCompSubFolder").AddFile("C:\My Files\MyFile.ext")

pProj.SaveProject
pProj.CloseProject
```

## Members

**Table 119** ■ ISWiComponentSubFolders Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of component subfolders in the ISWiComponentSubFolders collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the component subfolder to retrieve the <b>ISWiComponentSubFolder</b> object. For example, the following statements create references to the first component subfolder in the collection and the component subfolder named MyCompSubFolder:</p> <pre>Set pComponentSubFolder1 = pProj.ISWiComponentSubFolders.Item(1) Set pComponentSubFolder2 = pFeature.ISWiComponentSubFolders.Item("MyCompSubFolder")</pre> <p>Item is the default property for ISWiComponentSubFolders, which means that  pFeature.ISWiComponentSubFolders.Item("MyCompSubFolder") is equivalent to  pFeature.ISWiComponentSubFolders("MyCompSubFolder").</p>

## Applies To

- **ISWiComponent**
- **ISWiComponentSubFolder**

## ISWiConditions Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

The ISWiConditions collection contains all of the conditions associated with a specified feature. ISWiConditions provides an interface for enumerating all of the conditions in a feature.

## Members

**Table 120** ▪ ISWiConditions Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiConditions collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number of the condition in order to retrieve the <a href="#">ISWiCondition</a> object.</p> <p>Item is the default property for ISWiConditions, which means that <code>m_ISWiFeature.ISWiConditions.Item(2)</code> is equivalent to <code>m_ISWiFeature.ISWiConditions(2)</code>.</p>

## Applies To

- [ISWiFeature](#)

## ISWiCustomActions Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

The ISWiCustomActions collection contains all of the custom actions in the current project.

The VBScript example below displays a string with each custom action in the project:

```
Set pProject = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProject.OpenProject "C:\MySetups\MyProject.ism", True ' open read-only

sNames = "This project contains the following custom actions:" & vbNewLine

iCount = pProject.ISWiCustomActions.Count
For i = 1 to iCount
    sNames = sNames & vbTab & pProject.ISWiCustomActions(i).Name & vbNewLine
Next

pProject.CloseProject

MsgBox sNames
```

## Members

**Table 121** ▪ ISWiCustomActions Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Returns the number of elements in the ISWiCustomActions collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the custom action in order to retrieve the <a href="#">ISWiCustomAction</a> object.</p> <p>The name of the custom action is case-sensitive—for example, “MyAction” and “myAction” are two different actions.</p> <p>Item is the default property for ISWiCustomActions, which means that <code>pProject.ISWiCustomActions.Item("Action1")</code> is equivalent to <code>pProject.ISWiCustomActions("Action1")</code>.</p>

### Applies To

- [ISWiProject](#)

## ISWiDynamicFileLinkings Collection

**Project** ▪ This information applies to the following project types:

*Project-specific differences are noted where appropriate.*

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *Merge Module*

The ISWiDynamicFileLinkings collection contains all of the dynamic file links that are associated with a specified component.

## Members

**Table 122** ▪ ISWiDynamicFileLinkings Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of dynamic file links in the ISWiDynamicFileLinkings collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the dynamically linked folder to retrieve the <a href="#">ISWiDynamicFileLinking</a> object.

## Applies To

- [ISWiComponent](#)

## ISWiEnvironmentVars Collection

**Project** ▪ The ISWiEnvironmentVars collection applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

The ISWiEnvironmentVars collection contains all of the environment variables that are associated with a specified component.

## Members

**Table 123** ▪ ISWiEnvironmentVars Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiEnvironmentVars collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the environment variable to retrieve the <a href="#">ISWiEnvironmentVar</a> object.

## Applies To

- [ISWiComponent](#)

# ISWiFeatures Collection

**Project** - This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI

ISWiFeatures is a collection that contains every feature (as an **ISWiFeature** object) in your project.

When ISWiFeatures is a member of **ISWiProject**, it contains all of the top-level features in the project. To retrieve a collection of subfeatures, access the Features property of the **ISWiFeature** object. The result is an ISWiFeatures collection that contains the immediate subfeatures of the current top-level feature. Repeat for further levels of subfeatures.

## Members

**Table 124** - Members of ISWiFeatures Collection

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiFeatures collection.
Item	Read-Only Property	<p>Provide the index number or name of the feature to retrieve the <b>ISWiFeature</b> object. For example, the following statements create a copy of the first item in the collection and of the feature named Help_Files:</p> <pre>Set pFeat1 = m_ISWiProject.ISWiFeatures.Item(1) Set pFeat2 = m_ISWiProject.ISWiFeatures.Item("Help_Files")</pre> <p>The name of the feature is case-sensitive—for example, “Help_Files” and “Help_files” are two different features.</p> <p>Item is the default property for ISWiFeatures, which means that m_ISWiProject.ISWiFeatures.Item("Help_Files") is equivalent to m_ISWiProject.ISWiFeatures("Help_Files").</p>

## Example

The following Visual Basic code builds a string with all of the features and components in your project:

```
Dim pFeature As ISWiFeature  
Dim pComponent As ISWiComponent
```

```

For Each pFeature In m_ISWiProject.ISWiFeatures
    ' Add feature to string
    strProject = strProject & "Feature: " & pFeature.Name & vbNewLine
    strProject = strProject & "Components: "
    For Each pComponent In pFeature.ISWiComponents
        ' Add feature's components to string
        strProject = strProject & pComponent.Name & " "
    Next
    strProject = strProject & vbNewLine
Next

```

## Applies To

- ISWiProject

## ISWiFiles Collection

---

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

The ISWiFiles collection contains all of the files associated with a specified component or, in InstallScript projects, a component subfolder. ISWiFiles contains several read-write properties that allow you to set component properties and file attributes as you would in the IDE.

The following Visual Basic code illustrates how you would set a property for a specific file in a component. For the purposes of this example, assume that the variable `m_oMyComp` already has a reference to a component.

```
m_oMYComp.ISWiFiles("F1028_MyFile.dll").Hidden = True
```

## Members

**Table 125** ■ ISWiFiles Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiFiles collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or file key of the file in order to retrieve the <a href="#">ISWiFile</a> object. You cannot use the file name; you must specify the file key. You can view this value in the Direct Editor view (in the File column of the File table) or, in Windows Installer-based projects, the Key column of a component's file list. Be aware that file keys are subject to change when the files are dynamically linked.</p> <p>Item is the default property for ISWiComponents, which means that <code>m_ISWiComponent.ISWiFiles.Item("F1036_MyFile.exe")</code> is equivalent to <code>m_ISWiComponent.ISWiFiles("F1036_MyFile.exe")</code>.</p>

## Applies To

- [ISWiComponent](#)

## ISWiFolders Collection

**Project** ■ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

ISWiFolders contains every program folder belonging to a specified component.

At minimum, each component has the default folders listed below in its ISWiFolders collection. In addition, you could have added a predefined folder to the Shortcuts explorer by right-clicking on Shortcuts and choosing “Show Folder.”

- [TaskBarFolder]
- [SendToFolder]

- [DesktopFolder]

The following code demonstrates accessing the **ISWiFolder** object that represents the taskbar:

```
Dim m_pFolder As ISWiFolder
Set m_pFolder = m_pComponent.ISWiFolders("[TaskBarFolder"])
```

The taskbar, in turn, has subfolders of its own. These subfolders are contained in its SubFolders property, which is itself an ISWiFolders collection. Continuing the example above, you can now create a copy of the object for the Start menu, which is a subfolder of the taskbar in the Shortcuts explorer:

```
Set m_pFolder = m_pFolder.SubFolders("[StartMenuFolder"])
```

We can go even farther with this example and get a copy of the folder MyProgFolder under the Programs menu:

```
Set m_pFolder = m_pFolder.SubFolders("[ProgramMenuFolder"]').SubFolders("MyProgFolder")
```

## Members

**Table 126** • ISWiFolders Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiFolders collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the folder in order to retrieve the <b>ISWiFolder</b> object.  Item is the default property for ISWiFolders, which means that m_ISWiComponent.ISWiFolders.Item("[DesktopFolder]") is equivalent to m_ISWiComponent.ISWiFolders("[DesktopFolder]").

## Applies To

- **ISWiComponent**

## ISWiLanguages Collection

**Edition** • Support for multilanguage installations is available with InstallShield Premier Edition.

**Project** • This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object

- *Merge Module*

The ISWiLanguages collection contains all of the languages that are included in the current project.

## Members

**Table 127** ▪ ISWiLanguages Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of languages in the ISWiLanguages collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the language to retrieve the <i>ISWiLanguage</i> object.

## Applies To

- *ISWiProject*

## ISWiLatestSetups Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Contains all of the latest setup (Upgraded Image) objects belonging to the current patch configuration.

**Table 128** ▪ ISWiLatestSetups Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiLatestSetups collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or family name of the patch sequence in order to retrieve the ISWiLatestSetup object.</p> <p>The name of the upgraded image is case-sensitive—"Latest1" and "latest1" are two different upgraded image configurations.</p> <p>Item is the default property for ISWiLatestSetups, which means that pPatchConfig. ISWiLatestSetups.Item("Latest1") is equivalent to pPatchConfig.ISWiLatestSetups ("Latest1").</p>

## Applies To

- [ISWiPatchConfig](#)

## AddMsiPatchSequence Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the AddMsiPatchSequence method to add a ISWiMsiPatchSequence object to the current patch configuration.

## Syntax

```
AddMsiPatchSequence (FamilyName As String) As ISWiMsiPatchSequence
```

## Parameter

**Table 129** - AddMsiPatchSequence Method Parameter

Parameter	Description
<b>FamilyName</b>	Holds the family name of patch sequence

## Applies To

- [ISWiPatchConfig](#)

## DeleteMsiPatchSequence Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the DeleteMsiPatchSequence method to remove specified patch sequence from the current patch configuration.

## Syntax

```
DeleteMsiPatchSequence (MsiPatchSequence As ISWiMsiPatchSequence) As Long
```

Parameter

Table 130 ▪ DeleteMsiPatchSequence Method Parameter

Parameter	Description
MsiPatchSequence	Holds the patch sequence object to be deleted.

Applies To

- ISWiPatchConfig

ISWiMsiPatchSequences Collection

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Contains all of the patch sequences belonging to the current patch configuration.

Table 131 ▪ ISWiMsiPatchSequences Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiMsiPatchSequences collection.
Item	Read-Only Property	<p>Provide the index number or family name of the patch sequence in order to retrieve the ISWiMsiPatchSequences Object.</p> <p>The family name of the patch sequence is case-sensitive—" FamilyName" and "familyname" are two different configurations.</p> <p>Item is the default property for ISWiMsiPatchSequences, which means that pPatchConfig.</p> <p>ISWiMsiPatchSequences.Item("FamilyName ") is equivalent to pPatchConfig.</p> <p>ISWiMsiPatchSequences ("FamilyName").</p>

Applies To

- ISWiProject

## BuildPatch Method

**Project ▪ IswiPatchConfig** *This information applies to the following project types:*

- *Basic MSI*
- *InstallScript MSI*

Call BuildPatch to build the patch configuration identified by the current patch object. This action has the same effect as right-clicking on a patch configuration in the Patch Design view and then selecting Build a Patch.

### Syntax

BuildPatch()

### Parameter

**Table 132 ▪** Properties Associated with BuildPatchConfiguration Method

Property	Description
<b>PatchConfigErrorCount</b>	Include the error count associated with a particular patch build.
<b>PatchConfigWarningCount</b>	Include the warning count associated with a particular patch build.

### Example

The following Visual Basic lines demonstrate this method:

```

'Create the project object
dim pProject

set pProject = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")

'Call the OpenProject method

'#####

'# THIS SAMPLE WILL NOT EXECUTE PROPERLY WITHOUT A VALID PROJECT PATH

'#####

'pProject.OpenProject("\Your project.ism")

pProject.OpenProject("C:\Documents and Settings\Testlab\My Documents\MySetups\your project name-
21.ism")

'Call the OpenProject method

' Get existing configuration

Set oMyConfig = pProject.ISWiProductConfigs.Item("Product Configuration 1")

' Assume project already has release configuration...

Set oNewRelease = oMyConfig.ISWiReleases.Item("Release 1")

' Make sure release setting is uncompressed to build the patch...

oNewRelease.Compressed = False

oNewRelease.SetupEXE = True

' Create and set signing parameters...

Set oMyPatchConfig = pProject.AddPatchConfig("PatchDemo1")

oMyPatchConfig.SignPackage = True

oMyPatchConfig.SignUpdateExe = True

oMyPatchConfig.SignatureSPC = "C:\Users\TestLab\Desktop\Test.pfx"

oMyPatchConfig.SignaturePassword = "XX"

Set oMyLatestImage = oMyPatchConfig.AddUpgradedImage("LatestImg1")

Set oMyPreviousImage = oMyLatestImage.AddTargetImage("PrevImage1")

' Set base image...

oMyPreviousImage.MsiPath = "<ISProjectFolder>BaseImage\PatchDesignInterfaceDemo.msi"

' Set base MSI path to the existing patch configuration

'MyPatchConfig.ISWiUpgradedImages.Item("LatestImg1").ISWiTargetImages.Item("PrevImage1").MsiPath =
"<ISProjectFolder>BaseImage\PatchDesignInterfaceDemo.msi"

pProject.SaveProject

oNewRelease.Build( )

oMyPatchConfig.BuildPatch

MsgBox "Patch Congifuration Config1 build with " & _
    oMyPatchConfig.PatchConfigErrorCount & " Errors and " & _

```

```
oMyPatchConfig.PatchConfigWarningCount & " Warnings"
pProject.CloseProject
```

## ISWiObjects Collection

**Project** - This information applies to the following project types:

- *InstallScript*
- *InstallScript Object*

ISWiObjects is a collection that contains every InstallScript object (as an **ISWiObject** object) in your project. The following Visual Basic code illustrates the use of this collection:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"
Dim pFeature As ISWiFeature
Dim pObject As ISWiObject

Set pFeature = pProj.ISWiFeatures.Item(2)
Set pObject = pFeature.ISWiObjects.Item("@ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9")
pFeature.RemoveObject pObject

pProj.SaveProject
pProj.CloseProject
```

## Members

**Table 133** ■ ISWiObjects Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of InstallScript objects in the ISWiObjects collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or moniker of the InstallScript object to retrieve the <b>ISWiObject</b> object. (To get an InstallScript object's moniker, create a new Professional project in the IDE and add the InstallScript object to a feature, then go to the Direct Editor view's ISFeatureExtended table and see the Moniker column.) For example, the following statements create references to the first InstallScript object in the collection and the InstallScript object with moniker @ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9:</p> <pre>Set pObject1 = pProj.ISWiObjects.Item(1) Set pObject2 = pFeature.ISWiObjects.Item("@ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9")</pre> <p>Item is the default property for ISWiObjects, which means that  pFeature.ISWiObjects.Item("@ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9") is equivalent to pFeature.ISWiObjects("@ismk2:755142B0-1EB4-11D3-8B09-00105A9846E9").</p>

## Applies To

- **ISWiFeature**

## ISWiPatchConfigs Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

## Members

**Table 134** • ISWiPatchConfigs Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiPatchConfigs collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the patch configuration in order to retrieve the <a href="#">ISWiPatchConfig Object</a>.</p> <p>The name of the patch configurations is case-sensitive—"Patch One" and "Patch one" are two different configurations.</p> <p>Item is the default property for ISWiPatchConfigs, which means that pProject.ISWiPatchConfigs.Item("Patch1") is equivalent to pProject.ISWiPatchConfigs ("Patch1").</p>

## Example

The VBScript example below simply displays a string with each patch configuration in the project:

```
Dim pProject
Set pProject = CreateObject ("IswiAutoAutomation Interface Version.ISWiProject")
pProject.OpenProject "C:\MySetups\Vegetarian.ism", True

Dim sNames
sNames = "This project contains the following patch configurations: " & vbNewLine & vbTab

Dim pPatchConfigs
For Each pPatchConfigs In pProject.ISWiPatchConfigs
    sNames = sNames & pPatchConfigs.Name & vbNewLine & vbTab
Next

pProject.CloseProject

WScript.Echo sNames
Object
```

The following line illustrates how to access a particular patch configuration:

```
Set pPatchConfig = pISWiProj.ISWiPatchConfigs.Item("Patch 1.1")
```

## Applies To

- [ISWiProject](#)

## ISWiPatchExternalFiles Collection

**Project** • This information applies to the following project types:

- *Basic MSI*

- *InstallScript MSI*

Contains collection of external file objects belonging to the latest setup

## Members

**Table 135** - ISWiPatchWholeFiles Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiPatchExternalFiles collection.
<b>Item</b>	Read-Only Property	Provide the index number or FileKey in order to retrieve the ISWiPatchExternalFile object.

## Applies To

- *ISWiLatestSetup*

## AddPatchWholeFile Method

**Project** - This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Call the AddPatchWholeFile method to add a ISWiPatchWholeFile object to the latest setup item.

## Syntax

```
AddPatchWholeFile (FileKey As String) As ISWiPatchWholeFile
```

## Parameter

**Table 136** - AddPatchWholeFile Method Parameter

Parameter	Description
<b>FileKey</b>	Holds the file key of whole file object.

## Applies To

- *ISWiLatestSetup*

## DeletePatchWholeFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the DeletePatchWholeFile method to remove ISWiPatchWholeFile object from the latest setup item.

### Syntax

```
DeletePatchWholeFile (PatchWholeFile As ISWiPatchWholeFile) As Long
```

### Parameter

**Table 137** ▪ DeletePatchWholeFile Method Parameter

Parameter	Description
<b>PatchWholeFile</b>	Holds the whole file object to be deleted.

### Applies To

- ISWiLatestSetup

## ISWiPatchWholeFiles Collection

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Contains collection of whole file objects belonging to the latest setup

## Members

**Table 138** ■ ISWiPatchWholeFiles Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiPatchWholeFiles collection.
<b>Item</b>	Read-Only Property	Provide the index number or FileKey in order to retrieve the ISWiPatchWholeFile object.

## Applies To

- ISWiProject

## ISWiPathVariables Collection

**Project** ■ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

The ISWiPathVariables collection contains all of the path variables that are associated with the current project. You can add a path variable with the [AddPathVariable method](#) and delete a path variable with the [DeletePathVariable method](#).

The following VBScript code retrieves a list of every path variable in the project and displays the path variables in a message box:

```
Option Explicit
Dim pProject
Set pProject = CreateObject ("ISWiAutoAutomation Interface Version.ISWiProject")

pProject.OpenProject "C:\MySetups\ISWiPathVariables.ism", True

Dim sPathVars
Dim pPathVar

For Each pPathVar In pProject.ISWiPathVariables
    sPathVars = sPathVars & pPathVar.Name & ": " & pPathVar.Value & vbNewLine
Next

WScript.Echo sPathVars
pProject.CloseProject
```

The following line illustrates how to access a particular path variable:

```
Set pPathVar = pProject.ISWiPathVariables.Item("MyPathVar")
```

**Important** ▪ Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

## Members

**Table 139** ▪ ISWiPathVariables Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of path variables in the ISWiPathVariables collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the path variable to retrieve the <a href="#">ISWiPathVariable</a> object.

## Applies To

- [ISWiProject](#)

## ISWiPreviousSetups Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

Contains collection of all previous setups belonging to the latest setup

Each patch configuration must contain at least one latest setup and one previous setup in order for you to create a patch. You can have multiple previous setups per latest setup.

Every application or setup that you intend to patch to a latest setup must be added to the previous setup node.

For example, your company supports versions 1.0 and 1.1 of an application, and you want to upgrade both of these applications to version 2.0. To create a single patch to upgrade both versions, you would add V1.0 and V1.1 as previous setups to the latest setup. Your latest setup would contain V2.0.

## Members

**Table 140** ▪ ISWiPreviousSetups Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiPreviousSetups collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the previous setup in order to retrieve the ISWiPreviousSetup object.</p> <p>The name of the previous setup is case-sensitive—" Prev1" and "prev1" are two different configurations.</p> <p>Item is the default property for ISWiPreviousSetups, which means that pLatestSetup. ISWiPreviousSetups.Item("Prev1") is equivalent to pLatestSetup. ISWiPreviousSetups("Prev1").</p>

## Applies To

- ISWiProject

## AddPatchExternalFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the AddPatchExternalFile method to add a ISWiPatchExternalFile object to the latest setup item.

## Syntax

AddPatchExternalFile (Name As String) As ISWiPatchExternalFile

## Parameter

**Table 141** ▪ AddPatchExternalFile Method Parameter

Parameter	Description
<b>Name</b>	Holds the name of external file.

## Applies To

- ISWiLatestSetup

## DeletePatchExternalFile Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the DeletePatchExternalFile method to remove ISWiPatchExternalFile object from the latest setup item.

### Syntax

DeletePatchExternalFile (PatchExternalFile As ISWiPatchExternalFile) As Long

### Parameter

**Table 142** ▪ DeletePatchExternalFile Method Parameter

Parameter	Description
PatchExternalFile	Holds the external file object to be deleted.

### Applies To

- ISWiLatestSetup

## ISWiProductConfigs Collection

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

InstallScript and InstallScript Object projects contain only one element in ISWiProductConfigs; it is named Media.

The ISWiProductConfigs collection contains all of the product configurations in the current project.

## Members

**Table 143** ■ ISWiProductConfigs Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiProductConfigs collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the product configuration in order to retrieve the <b>ISWiProductConfig</b> object.</p> <p>The name of the product configurations is case-sensitive—"Product One" and "Product one" are two different configurations.</p> <p>Item is the default property for ISWiProductConfigs, which means that <code>pProject.ISWiProductConfigs.Item("Version 1")</code> is equivalent to <code>pProject.ISWiProductConfigs("Version 1")</code>.</p>

## Example

The VBScript example below simply displays a string with each product configuration in the project:

```
Dim pProject
Set pProject = CreateObject ("IswiAutoAutomation Interface Version.ISWiProject")
pProject.OpenProject "C:\MySetups\Vegetarian.ism", True

Dim sNames
sNames = "This project contains the following product configurations: " & vbNewLine & vbTab

Dim pProductConfigs
For Each pProductConfigs In pProject.ISWiProductConfigs
    sNames = sNames & pProductConfigs.Name & vbNewLine & vbTab
Next

pProject.CloseProject

WScript.Echo sNames
```

The following line illustrates how to access a particular product configuration:

```
Set pProdConfig = pISWiProj.ISWiProductConfigs.Item("Version 1.1")
```

## Applies To

- **ISWiProject**

## ISWiProperties Collection

**Project** - This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript MSI
- Merge Module

The ISWiProperties collection contains all of the Windows Installer properties in the current project. This interface is similar to the Property Manager. You can add a property with the [AddProperty method](#) and delete a property with the [DeleteProperty method](#).

The VBScript code below retrieves a list of every property in the project and displays them in a message box:

Option Explicit

Dim pProject

Set pProject = CreateObject ("ISWiAutoAutomation Interface Version.ISWiProject")

pProject.OpenProject "C:\MySetups\ISWiProperties.ism", True

Dim sProps

## Members

**Table 144** ■ ISWiProperties Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiProperties collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the property in order to retrieve the <a href="#">ISWiProperty</a> object.</p> <p>The name of the property is case-sensitive—“UpgradeCode” and “Upgradecode” are two different properties.</p> <p>Item is the default property for ISWiProperties, which means that <code>pISWiProject.ISWiProperties.Item("UpgradeCode")</code> is equivalent to <code>pISWiProject.ISWiProperties("UpgradeCode")</code>.</p>

## Applies To

- [ISWiProject](#)

## ISWiReleases Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*
- *Merge Module*

The ISWiReleases collection contains all of the releases belonging to the current product configuration.

The following line illustrates how to access a particular [ISWiRelease](#) object:

```
Set pRelease = pProject.ISWiProductConfigs("Version 1").ISWiReleases("NewRelease1")
' In an InstallScript project, there is only one element
' in ISWiProductConfigs, which is named "Media".
```

## Members

**Table 145** ■ ISWiReleases Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiReleases collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the release in order to retrieve the <a href="#">ISWiRelease</a> object.</p> <p>The name of the release is case-sensitive—“NewRelease1” and “Newrelease1” are two different releases.</p> <p>Item is the default property for ISWiReleases, which means that  <code>m_ISWiBldLbl.ISWiReleases.Item("NewRelease1")</code>  is equivalent to  <code>m_ISWiBldLbl.ISWiReleases("NewRelease1")</code>.</p>

## Applies To

- [ISWiProductConfig](#)

## ISWiRemoveFiles Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

The ISWiRemoveFiles collection represents a collection of ISWiRemoveFile objects in the InstallShield user interface.

## Members

**Table 146** ■ ISWiRemoveFiles Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiRemoveFiles collection.
<b>Item</b>	Read-Only Property	Provide the index number or key of the file or folder removal entry in order to retrieve its <a href="#">ISWiRemoveFile object</a> . You must specify the key. You can view this value in the Direct Editor view (in the FileKey column of the RemoveFile table. Item is the default property for ISWiRemoveFiles, which means that <code>m_ISWiComponent.ISWiRemoveFiles.Item("RemoveFile1")</code> is equivalent to <code>m_ISWiComponent.ISWiRemoveFiles("RemoveFile1")</code> .

## Applies To

- [ISWiComponent](#)

## ISWiSequence Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *InstallScript MSI*

The ISWiSequence collection is a virtual collection that contains all of the actions of the current project, sorted by sequence number.

## Members

**Table 147** ■ ISWiSequence Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSequence collection.
<b>InsertCustomAction</b>	Method	Use this method to insert a custom action into the selected sequence. This method returns an <b>ISWiSequenceRecord</b> object.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of an action in order to retrieve its <b>ISWiSequenceRecord</b> object.</p> <p>The name of the action is case-sensitive. That is, "ThisAction" and "thisAction" are two different actions.</p> <p>Item is the default property for ISWiSequence, which means that <code>pProject.InstallUISequence.Item("ThisAction")</code> is equivalent to <code>pProject.InstallUISequence("ThisAction")</code>.</p>
<b>RemoveSequenceRecord</b>	Method	Use this method to remove an item from a sequence in the project.

## Example

The VBScript example below displays a string with each action name and sequence number in the project's Installation User Interface sequence:

```
Dim pProject
Set pProject = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProject.OpenProject "C:\MySetups\YourProject.ism", True ' open read-only

Dim sNames
sNames = "The Installation UI sequence contains the following actions:" & vbNewLine & vbTab

For i = 1 to pProject.InstallUISequence.Count
    sNames = sNames & pProject.InstallUISequence.Item(i).Name & " " & _
        pProject.InstallExecuteSequence.Item(i).Sequence & vbNewLine & vbTab
Next

pProject.CloseProject

MsgBox sNames
```

## Applies To

- **ISWiProject**

## InsertCustomAction Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the InsertCustomAction method to insert a custom action into one of the project's sequences.

### Syntax

```
InsertCustomAction (CustomAction As ISWiCustomAction, Comment As String, Condition as String,
SequenceNumber as Long) as ISWiSequenceRecord
```

### Parameters

**Table 148** ▪ InsertCustomAction Method Parameters

Parameter	Description
<b>CustomAction</b>	The custom action you want to create.
<b>Comment</b>	An optional string comment about your custom action.
<b>Condition</b>	An optional string condition for your custom action.
<b>SequenceNumber</b>	The numeric sequence number for your custom action.

### Return Values

The InsertCustomAction method returns an [ISWiSequenceRecord](#) object.

### Applies To

- [ISWiSequence](#)

## RemoveSequenceRecord Method

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

Call the RemoveSequenceRecord method to remove an item from a sequence in the current project.

### Syntax

```
(sName As String) As Long
```

## Parameters

**Table 149** ▪ RemoveSequenceRecord Method Parameters

Parameter	Description
<b>sName</b>	Pass an ISWiSequenceRecord object to specify a sequence record that you want to remove from the project.

## Return Values

**Table 150** ▪ RemoveSequenceRecord Method Values

Return Value	Description
<b>0</b>	The item was successfully removed from a sequence.
<b>1</b>	The item was not removed from a sequence.

## Applies To

- [ISWiSequence](#)

## ISWiSetupFiles Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *InstallScript*
- *InstallScript MSI*
- *InstallScript Object*

ISWiSetupFiles is a collection that contains every support file (as an [ISWiSetupFile](#) object) in your project.

## Members

**Table 151** ■ ISWiSetupFiles Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of support files in the ISWiSetupFiles collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the support file to retrieve the <b>ISWiSetupFile</b> object. For example, the following statements create references to the first support file in the collection and the support file named MySupportFile.bmp:</p> <pre>Set pSetupFile1 = pProj.ISWiSetupFiles.Item(1) Set pSetupFile2 = pProj.ISWiSetupFiles.Item("MySupportFile.bmp")</pre> <p>Item is the default property for ISWiSetupFiles, which means that pProj.ISWiSetupFiles.Item("MySupportFile.bmp") is equivalent to pProj.ISWiSetupFiles("MySupportFile.bmp").</p>

## Example

The following Visual Basic code illustrates how you would set a property for a specific support file:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"

pProj.ISWiSetupFiles(1).Splash = True

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- **ISWiProject**

## ISWiSetupTypes Collection

**Project** ■ This information applies to the following project types:

- *InstallScript*
- *InstallScript MSI*

ISWiSetupTypes is a collection that contains every setup type (as an **ISWiSetupType** object) in your project.

## Members

**Table 152** ■ ISWiSetupTypes Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of setup types in the ISWiSetupTypes collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the setup type to retrieve the <b>ISWiSetupType</b> object. For example, the following statements create references to the first setup type in the collection and the setup type named CSSaveSpace:</p> <pre>Set pSetupFile1 = pProj.ISWiSetupTypes.Item(1) Set pSetupFile2 = pProj.ISWiSetupTypes.Item("CSSaveSpace")</pre> <p>Item is the default property for ISWiSetupTypes, which means that pProj.ISWiSetupTypes.Item("CSSaveSpace") is equivalent to pProj.ISWiSetupTypes("CSSaveSpace").</p>

## Example

The following Visual Basic code illustrates how you would set a property for a specific setup type:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("IswiAutoAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.ism"

pProj.ISWiSetupTypes("CSSaveSpace").DisplayName = "Client Setup - Save Space"

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- **ISWiProject**

## ISWiShellProperties Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

ISWiShellProperties is a collection of all of the Shell properties for a specified **ISWiShortcut** object.

## Members

**Table 153** ▪ ISWiShellProperties Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiShellProperties collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the Shell property in order to retrieve the <a href="#">ISWiShellProperty</a> object.

## Example

The following sample VBScript snippet retrieves the ISWiShellProperty object for the primary key MyShellProperty from the ISWiShellProperties collection:

```
Dim pShellProperty As ISWiShellProperty
Set pShellProperty = pShortcut.ISWiShellProperties("MyShellProperty")
```

## Applies To

- [ISWiShortcut](#)

## ISWiShortcuts Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*
- *Merge Module*

ISWiShortcuts contains every shortcut belonging to a specified [ISWiFolder](#) object.

The following example makes a copy of the shortcut named MyShortcut under the program folder contained in m\_pFolder:

```
Dim m_pShortcut As ISWiShortcut
Set m_pShortcut = m_pFolder.ISWiShortcuts("MyShortcut")
```

## Members

**Table 154** • ISWiShortcuts Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiShortcuts collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the shortcut in order to retrieve the <a href="#">ISWiShortcut</a> object.</p> <p>Item is the default property for ISWiShortcuts, which means that <code>m_pFolder.ISWiShortcuts.Item("MyShortcut")</code> is equivalent to <code>m_pFolder.ISWiShortcuts("MyShortcut")</code>.</p>

## Applies To

- [ISWiFolder](#)

## ISWiISProperties Collection

**Project** • This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript MSI*
- *Merge Module*

This collection contains all of the values for the Summary Information Stream settings in the current project. By accessing an element in this collection, you can set all of the Summary Information Stream settings in the General Information view.

The following Visual Basic code reads every Summary Information Stream setting in your project and displays each setting and its value.

```
Dim pProject As ISWiProject

Set pProject = New ISWiProject
pProject.OpenProject "C:\MySetups\SampleApp.ism", True

Dim sSISProps As String
sSISProps = "This package's Summary Information Stream has the following " & _
    pProject.ISWiISProperties.Count & " properties:"

Dim pSISProp As ISWiISProperty
For Each pSISProp In pProject.ISWiISProperties
    sSISProps = sSISProps & vbNewLine & vbTab & _
        pSISProp.Name & ": " & pSISProp.Value
Next
```

MsgBox sSISProps

pProject.CloseProject

## Members

**Table 155** ■ ISWiSISProperties Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSISProperties collection. Since the Summary Information Stream contains seven items at present, Count always has a value of 7.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the property in order to retrieve the <b>ISWiSISProperty</b> object.</p> <p>The name of the property is case-sensitive—"TemplateSummary" and "Templatesummary" are two different properties.</p> <p>Item is the default property for ISWiSISProperties, which means that pISWiProject.ISWiSISProperties.Item("Subject") is equivalent to pISWiProject.ISWiSISProperties("Subject").</p>

## Applies To

- **ISWiProject**

## ISWiSQLConnections Collection

**Project** ■ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

The ISWiSQLConnections collection contains all of the SQL Server connections in the current project.

## Members

**Table 156** ▪ ISWiSQLConnections Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSQLConnections collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the connection in order to retrieve the <a href="#">ISWiSQLConnection</a> object.</p> <p>The name of the connection is case-sensitive—"SQLConnection" and "SQLconnection" are two different items.</p> <p>Item is the default property for ISWiSQLConnections, which means that  <code>pISWiProject.ISWiSQLConnections.Item("SQLConnection")</code> is equivalent to  <code>pISWiProject.ISWiSQLConnections("SQLConnection")</code>.</p>

## Applies To

- [ISWiProject](#)

## ISWiSQLDatabaseServers Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

The ISWiSQLDatabaseServers collection contains all the database servers that you can choose to target by version requirements at run time.

## Members

**Table 157** ▪ ISWiSQLDatabaseServers Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSQLDatabaseServers collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the property in order to retrieve the <a href="#">ISWiSQLDatabaseServer</a> object.</p> <p>The name of the database server is case-sensitive—“SQLDatabaseServer” and “SQLDatabaseserver” are two different items.</p> <p>Item is the default property for ISWiSQLDatabaseServers, which means that <code>pISWiSQLConnection.ISWiSQLDatabaseServers.Item("SQLDatabaseServer")</code> is equivalent to <code>pISWiSQLConnection.ISWiSQLDatabaseServers("SQLDatabaseServer")</code>.</p>

## Applies To

- [ISWiSQLConnection](#)

## ISWiSQLReplaces Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

The ISWiSQLReplaces collection contains all the ISWiSQLReplace objects in the current project.

## Members

**Table 158** ▪ ISWiSQLReplaces Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSQLReplaces collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the property in order to retrieve the <b>ISWiSQLReplace</b> object.</p> <p>The name of the collection is case-sensitive—"SQLReplaces" and "SQLreplaces" are different.</p> <p>Item is the default property for ISWiSQLReplaces, which means that <code>pISWiSQLScript.ISWiSQLReplaces.Item("SQLReplace")</code> is equivalent to <code>pISWiSQLScript.ISWiSQLReplaces("SQLReplace")</code>.</p>

## Applies To

- **ISWiSQLScript**

## ISWiSQLRequirements Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

ISWiSQLRequirements returns a collection of all ISWiSQLRequirement objects associated with the database server.

## Members

**Table 159** ▪ ISWiSQLRequirements Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSQLRequirements collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the property in order to retrieve the <a href="#">ISWiSQLRequirement</a> object.</p> <p>The name of the property is case-sensitive—"SQLRequirements" and "SQLrequirements" are different.</p> <p>Item is the default property for ISWiSQLRequirements, which means that  <code>pISWiSQLConnection.ISWiSQLRequirements.Item("SQLRequirement")</code> is equivalent to  <code>pISWiSQLConnection.ISWiSQLRequirements("SQLRequirement")</code>.</p>

### Applies To

- [ISWiSQLConnection](#)

## ISWiSQLScriptErrors Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

The ISWiSQLScriptErrors collection contains all of the custom SQL script error handling entries for the ISWiSQLScriptError object.

## Members

**Table 160** ▪ ISWiSQLScriptErrors Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSQLScriptErrors collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the property in order to retrieve the <a href="#">ISWiSQLScriptError object</a> .

## Applies To

- [ISWiSQLScript](#)

## ISWiSQLScripts Collection

**Project** ▪ This information applies to the following project types:

- *Basic MSI*
- *DIM*
- *InstallScript*
- *InstallScript MSI*

The ISWiSQLScripts collection contains all the SQL scripts in the SQL Connection.

## Members

**Table 161** ▪ ISWiSQLScripts Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSQLScripts collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or name of the property in order to retrieve the <a href="#">ISWiSQLScript object</a>.</p> <p>The name of the script is case-sensitive—"SQLScript" and "SQLscript" are two different items.</p> <p>Item is the default property for ISWiSQLScripts, which means that <code>pISWiSQLConnection.ISWiSQLScripts.Item("SQLScript")</code> is equivalent to <code>pISWiSQLConnection.ISWiSQLScripts("SQLScript")</code>.</p>

## Applies To

- [ISWiSQLConnection](#)

## ISWiStringEntries Collection

**Project** ▪ This information applies to the following project types:

- Basic MSI
- DIM
- InstallScript
- InstallScript MSI
- InstallScript Object
- Merge Module

The ISWiStringEntries collection contains all of the string entries in the current language.

### Members

**Table 162** ▪ ISWiStringEntries Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of string entries in the ISWiStringEntries collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the string entry to retrieve the <a href="#">ISWiStringEntry</a> object.

### Applies To

- [ISWiLanguage](#)

## ISWiUpgradeTableEntries Collection

**Project** ▪ This information applies to the following project types:

- Basic MSI
- InstallScript MSI

The ISWiUpgradeTableEntries collection contains all the static major upgrade items, as they are defined in the Upgrades view as well as the Upgrade table in the Direct Editor.

## Members

**Table 163** ▪ ISWiUpgradeTableEntries Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiUpgradeTableEntries collection.
<b>Item</b>	Read-Only Property	<p>Provide the index number or upgrade code in order to retrieve the ISWiUpgradeTableEntries items.</p> <p>Item is the default property for ISWiUpgradeTableEntries, which means that m_ISWiProject.ISWiUpgradeTableEntries.Item("12345678-1234-1234-1234-123456789012") is equivalent to m_ISWiProject.ISWiUpgradeTableEntries("12345678-1234-1234-1234-123456789012").</p>

## Example

```
Dim oProj As ISWiProject
Dim oUpgradeItem As ISWiUpgradeTableEntry

Set oProj = New ISWiProject
oProj.OpenProject "C:\MySetup.ism"

For Each oUpgradeItem In oProj.ISWiUpgradeTableEntries
    oUpgradeItem.Language = "1033"
Next

oProj.SaveProject
oProj.CloseProject
```

To target a specific item, replace the For Each loop in the above code with this code:

```
For Each oUpgradeItem In oProj.ISWiUpgradeTableEntries
    If oUpgradeItem.UpgradeCode = "{12345678-1234-1234-1234-123456789012}" Then
        oUpgradeItem.Language = "1033"
    End If
Next
```

## Applies To

# Automation Objects for Advanced UI and Suite/Advanced UI Projects

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

Each InstallShield automation object represents an installation element such as a feature, a component, or a file. This section describes each of the InstallShield automation objects.

The highest-level object in the automation interface is the [ISWiProject object](#). The first thing you must do to access the interface is create this object. Then, you can use its objects, methods, and properties to modify your project.

## ISWiProject Object (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiProject contains the interface for opening, closing, and saving an Advanced UI or Suite/Advanced UI project (.issuite) file. When InstallShield is installed on your system, you can instantiate a copy of ISWiProject with the following VB and VBScript syntax:

```
Set m_ISWiProject = CreateObject("ISWiAutoSuiteAutomation Interface Version.ISWiProject")
```

To open an installation project, call the OpenProject method, as follows:

```
' Build path to the .ism file
strFile = "C:\InstallShield 2021 Projects\Test.issuite"
m_ISWiProject.OpenProject strFile
```

**Important** • If you are using the automation interface on a 64-bit machine, you may need to load the automation interface through a 32-bit executable file. Otherwise, you may encounter an error when you instantiate a copy of ISWiProject, or any other object. For more information, see [Using the Automation Interface on a 64-Bit System](#).

## Members

The following members of the ISWiProject object are available in the automation interface. Note that some methods, properties, and collections are available only for a particular project type.

**Table 1** • ISWiProject Object Members

Name	Type	Description
<b>ActiveLanguage</b>	Read-Write String Property	Gets or sets the default language of the project. Specify a single language as a language identifier; for example:  project.ActiveLanguage = "1033";
<b>AddExitCondition</b>	Method	Adds an exit error message that you want the Advanced UI or Suite/Advanced UI installation to display under various conditions before ending the installation.
<b>AddLanguage</b>	Method	 <b>Project</b> ▪ This is available in Suite/Advanced UI projects.   <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.  Adds a language to the project.
<b>AddPathVariable</b>	Method	Adds a path variable to the project.
<b>AddProperty</b>	Method	Adds an Advanced UI or Suite/Advanced UI property with a specified name to the project
<b>AddSetupFile</b>	Method	Adds a support file with the specified name to the project.
<b>AddSuiteAction</b>	Method	 <b>Project</b> ▪ This is available in Suite/Advanced UI projects.   <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.  Adds an action to the project.
<b>AddSuiteFeature</b>	Method	Adds a feature to the project or as a subfeature of an existing feature.
<b>AddSuitePackage</b>	Method	Adds a package to the project along with the specified target file and options for adding additional files.
<b>AddSuiteRelease</b>	Method	Adds a release to the project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Type	Description
<b>AddSuiteTransaction</b>	Method	<p>Adds a Windows Installer transaction to the project.</p> <p>Once your project contains a transaction, you can add .msi and .msp packages to the transaction.</p>
<b>ArpComments</b>	Read-Write String Property	Gets or sets comments about your product. This information is displayed for your product's entry in Programs and Features.
<b>ArpDisableChange</b>	Read-Write Boolean Property	<p>Gets or sets the value of the Disable Change Button setting in the General Information view. This setting is where you specify whether you want to disable the Change button for your product's entry in Programs and Features. The Change button enables end users to change installation options after the product has been installed. End users can remove or add features as needed.</p>
<b>ArpDisableRegistration</b>	Read-Write Boolean Property	<p>Inhibits or allows registration of the product in Programs and Features. If registration is disabled, the other Arp properties are ignored. Available values are:</p> <ul style="list-style-type: none"> <li>● <b>False</b>—Your Advanced UI or Suite/Advanced UI product's entry is displayed on the target system in Programs and Features. This is the default value.</li> <li>● <b>True</b>—Your Advanced UI or Suite/Advanced UI product's entry is not displayed on the target system in Programs and Features. The end user cannot use Programs and Features to remove the product, perform maintenance, or view support information. If you select this option, the other Arp properties are irrelevant.</li> </ul>
<b>ArpDisableRemove</b>	Read-Write Boolean Property	<p>Gets or sets the value of the Disable Remove Button setting in the General Information view. This setting is where you specify whether you want to disable the Remove button for your product's entry in Programs and Features. The Remove button enables end users to remove the product by clicking one button, which runs your uninstaller with a reduced user interface.</p> <p>If the end user clicks the Remove button to remove your product, actions in the User Interface sequence of the project are executed.</p>

**Table 1** • ISWiProject Object Members (cont.)

Name	Type	Description
<b>ArpHelpContact</b>	Read-Write String Property	<p>Gets or sets the name of the person or department that end users should contact for technical support.</p> <p>On some versions of Windows, this information is displayed on the Support Info dialog box for your product's entry in Programs and Features.</p>
<b>ArpHelpTelPhone</b>	Read-Write String Property	<p>Gets or sets the technical support phone number for your product.</p> <p>On some versions of Windows, this information is displayed on the Support Info dialog box for your product's entry in Programs and Features.</p>
<b>ArpHelpUrl</b>	Read-Write String Property	<p>Gets or sets the URL that you would like end users to visit for technical support information for your product. This URL is displayed for your product's entry in Programs and Features.</p>
<b>ArpIcon</b>	Read-Write String Property	<p>Gets or sets the path on your development system to the .ico, .exe or .dll file that contains the icon resource that you want to be used for your product's entry in Programs and Features.</p> <p>If you want to use the icon in a file that is present on target systems (for example, in a file that is installed by one of the packages in the Advanced UI or Suite/Advanced UI installation), you can use a directory property as part of the path for the icon file. If you leave this property empty, InstallShield uses the icon that is specified in the Setup.exe Icon File setting on the Setup.exe tab in the Releases view.</p>
<b>ArpIconIndex</b>	Read-Write Integer Property	<p>If the icon file that you specify contains more than one icon resource, you can use the ArpIconIndex property to specify the index.</p> <ul style="list-style-type: none"> <li>• A nonnegative integer refers to the order of the icon resources in the executable file. For example, 0 refers to the first icon in the file, 1 refers to the second icon, and 2 refers to the third icon.</li> <li>• Use a negative number to refer to a specific resource ID. For example, the icon index -12 refers to the icon with a resource ID of 12.</li> </ul>

**Table 1** • ISWiProject Object Members (cont.)

Name	Type	Description
<b>ArpProductUrl</b>	Read-Write String Property	<p>Gets or sets a general URL for your company or product—for example, <a href="http://www.mycompany.com">http://www.mycompany.com</a>.</p> <p>On some versions of Windows, the publisher name on the Support Info dialog box is a hyperlink to this URL. The Support Info dialog box is displayed when an end user clicks the support information hyperlink for your product's entry in Programs and Features.</p>
<b>ArpPublisher</b>	Read-Write String Property	<p>Gets or sets the name of the company that created the product. This information is displayed for your product's entry in Programs and Features.</p>
<b>ArpReadMe</b>	Read-Write String Property	<p>Gets or sets a valid URL for a Readme file or Customer Support page for your product.</p> <p>On some versions of Windows, this information is displayed on the Support Info dialog box for your product's entry in Programs and Features.</p>
<b>ArpUpdateUrl</b>	Read-Write String Property	<p>Gets or sets a URL where end users can get information about product updates or download the latest version.</p> <p>On some versions of Windows, this information is displayed on the Support Info dialog box for your product's entry in Programs and Features.</p>
<b>CloseProject</b>	Method	Closes an Advanced UI or Suite/Advanced UI project.
<b>CreateProject</b>	Method	Creates a new InstallShield project file (.issuite) for an Advanced UI or Suite/Advanced UI project.
<b>DeleteExitCondition</b>	Method	Removes an exit error message from the project.
<b>DeleteLanguage</b>	Method	<div>  <p><b>Project</b> • This is available in Suite/Advanced UI projects.</p> </div> <div>  <p><b>Edition</b> • The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Removes a language from the project.</p> </div>
<b>DeletePathVariable</b>	Method	Removes a path variable from the project.
<b>DeleteProperty</b>	Method	Removes an Advanced UI or Suite/Advanced UI property from the project.

**Table 1** • ISWiProject Object Members (cont.)

Name	Type	Description
<b>DeleteSetupFile</b>	Method	Removes a support file from the project.
<b>DeleteSuiteAction</b>	Method	 <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p>  <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Removes an action from the project.</p>
<b>DeleteSuiteFeature</b>	Method	Removes a feature from the project.
<b>DeleteSuitePackage</b>	Method	Removes a package or a Windows Installer transaction from the project.
<b>DeleteSuiteRelease</b>	Method	Removes a release from the project.
<b>ForceUpgrade</b>	Method	Upgrades the project from an earlier version of InstallShield to the current version.
<b>GenerateGUID</b>	Method	Generates a new, unique GUID that is returned as a string.
<b>OpenProject</b>	Method	Opens an Advanced UI or Suite/Advanced UI project so that you can modify it through the automation interface
<b>ISWiLanguages</b>	Collection	Contains all of the languages in the current project.
<b>ISWiPathVariables</b>	Collection	Contains all of the Advanced UI or Suite/Advanced UI path variables in the current project.
<b>ISWiProperties</b>	Collection	Contains all of the Advanced UI or Suite/Advanced UI properties in the current project.
<b>ISWiSetupFiles</b>	Collection	Contains all of the support files in the current project.
<b>ISWiSuiteActions</b>	Collection	 <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p>  <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Contains all of the Suite/Advanced UI actions that are included in a project.</p>

**Table 1** ■ ISWiProject Object Members (cont.)

Name	Type	Description
<b>ISWiSuiteEvent</b>	Method	 <p><b>Project</b> ■ This is available in Suite/Advanced UI projects.</p>  <p><b>Edition</b> ■ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Accesses a specific event in the project.</p>
<b>ISWiSuiteEvents</b>	Collection	 <p><b>Project</b> ■ This is available in Suite/Advanced UI projects.</p>  <p><b>Edition</b> ■ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Contains all of the events that are in a project.</p>
<b>ISWiSuiteFeatures</b>	Collection	<p>Contains every feature (as an ISWiSuiteFeature object) in your project.</p> <p>When ISWiSuiteFeatures is a member of ISWiProject, it contains all of the root-level features in the project. To retrieve a collection of subfeatures, access the Features property of the ISWiSuiteFeature object. The result is an ISWiSuiteFeatures collection that contains the immediate subfeatures of the current root-level feature. Repeat for further levels of subfeatures.</p>
<b>ISWiSuiteExitConditions</b>	Collection	Contains all of the exit conditions in your project.
<b>ISWiSuitePackages</b>	Collection	Contains every package (as an ISWiSuitePackage object) and every Windows Installer transaction (also as an ISWiSuitePackage object) in your project.
<b>ISWiSuiteReleases</b>	Collection	Contains all of the releases in your Advanced UI or Suite/Advanced UI project.
<b>ProductName</b>	Read-Write String Property	Gets or sets the name of the product. For information on how the product name is used, see <a href="#">Specifying a Product Name</a> .
<b>ProjectType</b>	Read-only Integer Property	<p>Gets the project type. The valid value is:</p> <ul style="list-style-type: none"> <li>● <b>eptSuite (16)</b>—Advanced UI or Suite/Advanced UI project</li> </ul>

**Table 1** • ISWiProject Object Members (cont.)

Name	Type	Description
<b>ProductVersion</b>	Read-Write String Property	<p>Gets or sets the version number for your product. The version must contain only numbers. It is typically in the format <i>aaa.bbb.ccccc</i> or <i>aaa.bbb.ccccc.ddddd</i>, where <i>aaa</i> represents the major version number, <i>bbb</i> represents the minor version number, <i>cccc</i> represents the build number, and <i>dddd</i> represents the revision number. The maximum value for the <i>aaa</i> and <i>bbb</i> portions is 255. The maximum value for <i>cccc</i> and <i>dddd</i> is 65,535.</p> <p>Note that although you can include the fourth field (<i>dddd</i>), the installation does not use this part of the product version to distinguish between different product versions. To learn more, see <a href="#">Specifying the Product Version</a>.</p>
<b>SaveProject</b>	Method	Saves the Advanced UI or Suite/Advanced UI project.
<b>SuiteGuid</b>	Read-Write String Property	<p>Gets or sets a GUID that uniquely identifies the Advanced UI or Suite/Advanced UI installation. To have generate a different GUID, call <a href="#">GenerateGUID</a>.</p> <p>Since this code uniquely identifies your Advanced UI or Suite/Advanced UI installation, changing the Suite GUID after you have already distributed your release is not recommended.</p>

## AddExitCondition Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddExitCondition method adds an exit condition to the project. Using this method is similar to defining an exit condition in the General Information view in InstallShield. You can set the properties of the exit condition with the ISWiSuiteExitCondition object.

### Syntax

AddExitCondition (Message As String)

## Parameters

**Table 2** • AddExitCondition Method Parameters

Parameter	Description
<b>Message</b>	Specify the error message that you want the Advanced UI or Suite/Advanced UI installation to display at run time if the condition that you are configuring is true.  As an alternative, you can enter a string identifier whose value is the error message that you want the installation to use.

## Applies To

- ISWiProject

## AddLanguage Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to Suite/Advanced UI projects.

**Edition** • Support for multilanguage installations is available with InstallShield Premier Edition.

The AddLanguage method adds a language to the project. Using this method is similar to adding a language in the General Information view in InstallShield. You can set the properties of the new language with the ISWiLanguage object.

## Syntax

AddLanguage (LangId As String)

## Parameters

**Table 3** • AddLanguage Method Parameters

Parameter	Description
<b>LangId</b>	Specify the language ID (as a string) that you want to add to the current project. For example:  oProject.AddLanguage "1035"

## Applies To

- ISWiProject

## AddPathVariable Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddPathVariable method adds a path variable to the project. Using this method is similar to adding a path variable in the Path Variables view in InstallShield. You can set the properties of the new path variable with the ISWiPathVariable object.

**Important** ▪ Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

### Syntax

AddPathVariable (sName As String) As ISWiPathVariable

### Parameters

**Table 4** ▪ AddPathVariable Method Parameters

Parameter	Description
sName	Specify the name of the path variable that you want to add.

### Applies To

- ISWiProject

## AddProperty Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddProperty method adds an Advanced UI or Suite/Advanced UI property with a specified name to the project.

## Syntax

AddProperty (Name As String) As ISWiProperty

## Parameters

**Table 5** - AddProperty Method Parameters

Parameter	Description
<b>Name</b>	Specify the name of the Advanced UI or Suite/Advanced UI property that you want to add.

## Example

The following Visual Basic lines demonstrate this method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("ISWiAutoSuiteAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.issuite"
```

```
Dim pProperty As ISWiProperty
Set pProperty = pProj.AddProperty ("MYPROP")
pProperty.Value = "MyPropValue"
```

```
pProj.SaveProject
pProj.CloseProject
```

## Applies To

- [ISWiProject](#)

## AddSetupFile Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- [Advanced UI](#)
- [Suite/Advanced UI](#)

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSetupFile method adds a support file with the specified name to the project. Using this method is similar to adding a path variable in the Support Files view in InstallShield. You can set the properties of the new path variable with the ISWiSetupFile object.

## Syntax

AddSetupFile (FileName As String) As ISWiSetupFile

## Parameters

**Table 6** - AddSetupFile Method Parameters

Parameter	Description
FileName	Specify the fully qualified path and file name of the support file that you want to add.

## Example

The following Visual Basic lines demonstrate this method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("ISWiAutoSuiteAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.issuite"
Dim pSetupFile As ISWiSetupFile

Set pSetupFile = pProj.AddSetupFile ("C:\My Files\MySupportFile.ext")

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- ISWiProject

## AddSuiteAction Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to Suite/Advanced UI projects.

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuiteAction method adds an action to the project.

## Syntax

AddSuiteAction (ActionName As String, ActionType As ISWiSuiteActionType) as ISWiSuiteAction

## Parameters

**Table 7** • AddSuiteAction Method Parameters

Parameter	Description
<b>ActionName</b>	Specify the name of the action that you want to add.
<b>ActionType</b>	<p>Specify the type of action. Available options are:</p> <ul style="list-style-type: none"><li>● <b>esatDll (1)</b>—Calls a function in a DLL file.</li><li>● <b>esatPowerShell (2)</b>—Runs a PowerShell script to perform system configuration tasks.</li><li>● <b>esatExe (4)</b>—Launches an executable file. The Suite/Advanced UI engine waits for the action to complete before proceeding with the next part of the installation.</li><li>● <b>esatStartExe (8)</b>—Launches an executable file. The Suite/Advanced UI engine runs the action simultaneously as the next part of the installation proceeds.</li><li>● <b>esatSetProperty (16)</b>—Sets a Suite/Advanced UI property.</li><li>● <b>esatIScript (32)</b>—Runs InstallScript code.</li><li>● <b>esatClr (64)</b>—Calls a public method in a managed assembly.</li></ul>

## Applies To

- ISWiProject

## AddSuiteFeature Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuiteFeature method creates a feature with the specified name. AddSuiteFeature is a member of ISWiProject. The new feature is added to the current project as a root-level feature, but when this method is a member of an ISWiSuiteFeature object, the new feature is added as a subfeature of the current feature.

The feature is created with the same default properties that new features have when you add them in InstallShield.

After you have added the feature, you can set its other properties and associate packages with it.

## Syntax

```
AddSuiteFeature (SuiteFeatureKey As String) As ISWiSuiteFeature
```

## Parameters

**Table 8 •** AddSuiteFeature Method Parameters

Parameter	Description
<b>SuiteFeatureKey</b>	The feature key is the same as the name of the feature that is displayed in the Features view. The name becomes the index for the new ISWiSuiteFeature object. This string must contain only alphanumeric characters, dots (.), or underscores (_), and it must begin with a letter or an underscore. FeatureKey must be unique among your project's feature names.  Feature names are case-sensitive.

## Example

The following Visual Basic lines demonstrate calling AddSuiteFeature to add a feature and a subfeature:

```
Dim pProject As ISWiProject

Set pProject = New ISWiProject
pProject.OpenProject "C:\MySetups\SampleApp.issuite"

Dim pFeat1, pFeat2 As ISWiSuiteFeature
Dim sFeat1Name, sFeat2Name As String

sFeat1Name = "ParentFeature"
sFeat2Name = "SubFeature"

' Add the feature ParentFeature, then SubFeature under ParentFeature
Set pFeat1 = pProject.AddSuiteFeature(sFeat1Name)
Set pFeat2 = pFeat1.AddSuiteSubFeature(sFeat2Name)

pProject.SaveProject
pProject.CloseProject
```

## Applies To

- ISWiProject

## AddSuitePackage Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

Project-specific differences are noted where applicable.

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuitePackage method adds a package (such as an .msi package, an InstallScript package, an .exe package, or other supported type) along with the specified target file and options for adding additional files. Using this method is similar to adding a package in the Packages view in InstallShield. You can set the properties of the new package with the ISWiSuitePackage object.

### Syntax

```
AddSuitePackage (PackageType As ISWiSuitePackageType, TargetFileName As String, AdditionalFiles As  
ISWiAdditionalFiles) As ISWiSuitePackage
```

## Parameters

**Table 9** • AddSuitePackage Method Parameters

Parameter	Description
<b>PackageType</b>	<p>Specify the type of package that you are adding to the project.</p> <p>The following project types are available in Advanced UI and Suite/Advanced UI projects:</p> <ul style="list-style-type: none"><li>• <b>esptMsi (1)</b>—Windows Installer package (.msi)</li><li>• <b>esptMsp (2)</b>—Windows Installer patch (.msp)</li><li>• <b>esptIsip (4)</b>—InstallScript package</li></ul> <p>The following project types are available only in Suite/Advanced UI projects:</p> <ul style="list-style-type: none"><li>• <b>esptTransaction (-1)</b>—Windows Installer transaction. This package type is available in Suite/Advanced UI projects.</li><li>• <b>esptExe (3)</b>—executable package (.exe). This package type is available in Suite/Advanced UI projects.</li><li>• <b>esptIsmMsi (5)</b>—Basic MSI project (.ism)</li><li>• <b>esptIsmIsip (6)</b>—InstallScript project (.ism)</li><li>• <b>esptAppx (7)</b>—Sideloaded Windows App package (.appx)</li><li>• <b>esptWebDeploy (8)</b>—Web Deploy package (.zip)</li></ul>
<b>TargetFileName</b>	<p>Specify the file in the package (such as the .msi file) that the Advanced UI or Suite/Advanced UI installation should invoke.</p>
<b>AdditionalFiles</b>	<p>Specify the type of additional files that you want to add for the package. Available options are:</p> <ul style="list-style-type: none"><li>• <b>eaftNothing (0)</b>—Add nothing. This package does not need any additional files.</li><li>• <b>eaftAdjacentFiles (1)</b>—Add adjacent files; that is, add the files next to this package.</li><li>• <b>eaftSubFolders (2)</b>—Add files in subfolders; that is, add the files below this package.</li><li>• <b>eaftAdjacentFilesAndSubFolders (3)</b>—Add adjacent files and files in subfolders; that is, add the files next to and below this package.</li></ul>

## Applies To

- ISWiProject

## AddSuiteRelease Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuiteRelease method adds a release with the specified name to the project. Using this method is similar to adding a release in the Releases view in InstallShield. You can set the properties of the new release with the ISWiSuiteRelease object.

### Syntax

```
AddSuiteRelease (ReleaseName As String) as ISWiSuiteRelease
```

### Parameters

**Table 10** ▪ AddSuiteRelease Method Parameters

Parameter	Description
ReleaseName	Specify the name of the release that you want to add.

### Applies To

- ISWiProject

## AddSuiteTransaction Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuiteTransaction method adds a Windows Installer transaction to a Suite/Advanced UI project, and it returns a package. Once your project contains a transaction, you can add .msi and .msp packages to the transaction.

## Syntax

AddSuiteTransaction () As ISWiSuitePackage

## Parameters

The AddSuiteTransaction method does not take any parameters.

## Applies To

- ISWiProject

## CloseProject Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

To close the .issuite file that you opened with OpenProject, call CloseProject.

## Syntax

CloseProject ()

## Return Values

CloseProject always returns 0.

## Applies To

- ISWiProject

## CreateProject Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The CreateProject method creates a new InstallShield project file (.issuite) for Advanced UI and Suite/Advanced UI projects.

## Syntax

CreateProject (strISWiProjectFile As String, ByVal ProjectType As ISWiProjectType)

## Parameters

**Table 11** - CreateProject Method Parameters

Parameter	Description
<b>strISWiProjectFile</b>	Enter the fully qualified path to the .issuite file that you want to create. Include the full file name.
<b>ProjectType</b>	Specify the type of project that you want to create. The valid value is: <ul style="list-style-type: none"><li>• <b>eptSuite (16)</b>—Creates an Advanced UI or Suite/Advanced UI project.</li></ul>

## Example

The following sample code creates an Advanced UI or Suite/Advanced UI project and sets its product version to 2.00.0000.

```
dim proj
set proj = CreateObject("ISWiAutoSuite22.ISWiProject")

proj.CreateProject "d:\scratch\packagetest.issuite", 16 '16: ISWiProjectType.eptSuite
proj.OpenProject "d:\scratch\packagetest.issuite", false

proj.ProductVersion = "2.00.0000"

proj.SaveProject
proj.CloseProject
```

## Applies To

- **ISWiProject**

## DeleteExitCondition Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- **Advanced UI**

- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteExitCondition method removes an exit condition from the project. Using this method is similar to removing an exit condition in the General Information view in InstallShield.

## Syntax

DeleteExitCondition (ExitCondition As ISWiSuiteExitCondition)

## Parameters

**Table 12** ▪ DeleteExitCondition Method Parameters

Parameter	Description
<b>ExitCondition</b>	Specify the ISWiSuiteExitCondition object that you want the method to remove from your project.

## Applies To

- ISWiProject

## DeleteLanguage Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

**Edition** ▪ Support for multilanguage installations is available with InstallShield Premier Edition.

The DeleteLanguage method removes a language from the current project. Using this method is similar to removing a language in the General Information view in InstallShield.

## Syntax

DeleteLanguage (Language As ISWiLanguage)

## Parameters

**Table 13** ▪ DeleteLanguage Method Parameters

Parameter	Description
<b>Language</b>	Specify the ISWiLanguage object that you want the method to remove from your project.

## Applies To

- [ISWiProject](#)

## DeletePathVariable Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeletePathVariable method removes a path variable with a specified name from the project.

**Important** ▪ Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

## Syntax

DeletePathVariable (pPathVar ISWiPathVariable) As Long

## Parameters

**Table 14** ▪ AddPathVariable Method Parameters

Parameter	Description
<b>pPathVar</b>	Pass the ISWiPathVariable object for the path variable that you want to delete.

## Applies To

- [ISWiProject](#)

## DeleteProperty Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteProperty method removes an Advanced UI or Suite/Advanced UI property with a specified name from the project.

### Syntax

```
DeleteProperty(ByVal pProperty As ISWiProperty) As Long
```

### Parameters

**Table 15** ▪ DeleteProperty Method Parameters

Parameter	Description
Property	Pass the ISWiProperty object that you want to remove.

### Example

The following Visual Basic lines demonstrate this method:

```
Dim proj As ISWiAutoSuiteAutomation Interface Version.ISWiProject
Set proj = New ISWiAutoSuiteAutomation Interface Version.ISWiProject
proj.OpenProject "c:\mysetups\your project name-3.issuite"
Dim pProp As ISWiAutoSuiteAutomation Interface Version.ISWiProperty
Set pProp = proj.ISWiProperties.Item("MyProperty")
proj.DeleteProperty pProp
```

### Applies To

- ISWiProject

## DeleteSetupFile Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSetupFile method removes the specified support file from the project.

## Syntax

DeleteSetupFile (pSetupFile As ISWiSetupFile) As Long

## Parameters

**Table 16** ▪ DeleteSetupFile Method Parameters

Parameter	Description
pSetupFile	Pass the ISWiSetupFile object that you want to delete.

## Example

The following Visual Basic lines demonstrate this method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("ISWiAutoSuiteAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.issuite"
Dim pSetupFile As ISWiSetupFile

Set pSetupFile = pProj.ISWiSetupFiles.Item("MySupportFile.abc")
pProj.DeleteSetupFile pSetupFile

pProj.SaveProject
pProj.CloseProject
```

## Applies To

- [ISWiProject](#)

## DeleteSuiteAction Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSuiteAction method removes an action from the project.

## Syntax

DeleteAction (SuiteAction As ISWiSuiteAction)

## Parameters

**Table 17** ▪ AddSuiteAction Method Parameters

Parameter	Description
SuiteAction	Specify the ISWiSuiteAction object that you want to delete.

## Applies To

- ISWiProject

## DeleteSuiteFeature Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSuiteFeature method permanently removes a feature from the current project.

## Syntax

DeleteSuiteFeature (Feature As ISWiSuiteFeature) As Long

## Parameters

**Table 18** ▪ DeleteSuiteFeature Method Parameters

Parameter	Description
Feature	Specify the ISWiSuiteFeature object that you want to remove.

## Applies To

- ISWiProject

## DeleteSuitePackage Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSuitePackage method removes a package or a Windows Installer transaction from the current project.

### Syntax

DeleteSuitePackage (Package As ISWiSuitePackage) As Long

### Parameters

**Table 19** ▪ DeleteSuitePackage Method Parameters

Parameter	Description
Package	Specify the ISWiSuitePackage object that you want to remove.

### Applies To

- ISWiProject

## DeleteSuiteRelease Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSuiteRelease method removes a release from the Advanced UI or Suite/Advanced UI project.

### Syntax

DeleteSuiteRelease (SuiteRelease As ISWiSuiteRelease)

## Parameters

**Table 20** ▪ DeleteSuiteRelease Method Parameters

Parameter	Description
<b>SuiteRelease</b>	Pass the ISWiSuiteRelease object that you want to delete.

## Applies To

- [ISWiProject](#)

## ForceUpgrade Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ForceUpgrade method upgrades the project from an earlier version of InstallShield to the current version.

## Syntax

ForceUpgrade (ISWiProjectFile As String)

## Parameters

**Table 21** ▪ ForceUpgrade Method Parameters

Parameter	Description
<b>ISWiProjectFile</b>	Enter the fully qualified path to the Advanced UI or Suite/Advanced UI project file (.issuite) that you want to upgrade. Include the full file name.

## Applies To

- [ISWiProject](#)

## GenerateGUID Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The GenerateGUID method generates a new, unique GUID that is returned as a string.

## Syntax

GenerateGUID ( )

## Applies To

- [ISWiProject](#)

## ISWiSuiteEvent Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to Suite/Advanced UI projects.

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteEvent accesses a specific event in the project.

## Syntax

ISWiSuiteEvent (EventType as ISWiSuiteEventType) as ISWiSuiteEvent

## Parameters

**Table 22** • ISWiSuiteEvent Method Parameters

Parameter	Description
<b>Type</b>	<p>Specify the type of event. Available options are:</p> <ul style="list-style-type: none"><li>● <b>esetOnBegin (0)</b>—The OnBegin event is the first event in a Suite/Advanced UI installation. Actions that are scheduled for this event are executed during all modes (install, maintenance, repair, etc.) unless the conditional statement that is defined for the action evaluates as false.</li><li>● <b>esetOnResuming (1)</b>—The OnResuming event launches its actions when a Suite/Advanced UI installation is resuming after the target machine has been restarted.</li><li>● <b>esetOnStaging (2)</b>—The OnStaging event launches its actions immediately before the Suite/Advanced UI installation is staged; that is, before the Suite/Advanced UI installation downloads its package (if applicable), extracts its packages from the Setup.exe file (if applicable), and copies its packages to a directory that the end user specifies on the BrowseStageFolder wizard page or by setting the <b>ISRootStagePath</b> property through the command line.</li><li>● <b>esetOnStaged (3)</b>—The OnStaged event launches its actions after the Suite/Advanced UI installation has downloaded its packages (if applicable), extracted them from the Setup.exe file, and copied them to the staging directory.</li><li>● <b>esetOnPackagesConfiguring (4)</b>—The OnPackagesConfiguring event launches its actions immediately before the packages in the Suite/Advanced UI installation are being installed, modified, repaired, or removed.</li><li>● <b>esetOnPackagesConfigured (5)</b>—The OnPackagesConfigured event launches its actions when the packages in the Suite/Advanced UI installation have been installed, modified, repaired, or removed.</li></ul>
<b>Type (cont.)</b>	<ul style="list-style-type: none"><li>● <b>esetOnRebooting (6)</b>—The OnRebooting event launches its actions immediately before the Suite/Advanced UI installation triggers a restart of the machine.</li><li>● <b>esetOnEnd (7)</b>—The OnEnd event launches its actions immediately before the end of a successful Suite/Advanced UI installation. If the end user cancels the Suite/Advanced UI installation or the installation encounters an error, the OnEnd event does not run.</li><li>● <b>esetOnPackageConfiguring (8)</b>—This event launches the actions that the Suite/Advanced UI installation should launch before installing, removing, repairing, or modifying a package.</li><li>● <b>esetOnPackageConfigured (9)</b>—This event launches the actions that the Suite/Advanced UI installation should launch after installing, removing, repairing, or modifying a package.</li></ul> <p>For more information, see <a href="#">Types of Events in a Suite/Advanced UI Installation</a>.</p>

## Applies To

- ISWiProject

## OpenProject Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

To open your Advanced UI or Suite/Advanced UI project so that you can modify it through the automation interface, call OpenProject with the fully qualified path to your .issuite file. This method is equivalent to loading a project in InstallShield.

**Note** ▪ The OpenProject method fails if the project is open in InstallShield.

## Syntax

OpenProject (strISWiProjectFile As String, Optional ByVal bReadOnly As Boolean) As Long

## Parameters

**Table 23** ▪ OpenProject Method Parameters

Parameter	Description
<b>strISWiProjectFile</b>	Enter the fully qualified path to the project file (.issuite).
<b>bReadOnly</b>	Determines whether the project is opened with write privileges. True opens the project as a read-only file. The default value for this optional parameter is False.

Return Values and Errors

**Table 24** ▪ OpenProject Method Return Values and Errors

Return Value	Description
<b>0</b>	The project was successfully opened.
<b>1</b>	The project was opened, but it is locked by some other process.

**Table 24** ▪ OpenProject Method Return Values and Errors (cont.)

Return Value	Description
2	Attempted to open project for write access, but project opened in read-only mode.
Error Code 1100	Unable to open file: %1. Ensure that the file is a valid InstallShield project.

## Example

The following Visual Basic lines demonstrate this method:

```
Dim pProj As ISWiProject
Set pProj = CreateObject("ISWiAutoSuiteAutomation Interface Version.ISWiProject")
pProj.OpenProject "C:\MySetups\Project1.issuite"
' Modify project here.
pProj.SaveProject
pProj.CloseProject
```

## Applies To

- [ISWiProject](#)

## SaveProject Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

To save any changes that you have made to your *Advanced UI* or *Suite/Advanced UI* project file through the automation interface, call the `SaveProject` method.

## Syntax

`SaveProject ()`

## Return Values and Errors

**Table 25** ▪ SaveProject Method Values

Return Value	Description
<b>ERROR_SUCCESS (0)</b>	Project is saved.
<b>Error Code 1104</b>	Unable to save file: %1. The project is open in read-only mode or is being used by another process.

### Applies To

- ISWiProject

## ISWiLanguage Object (Advanced UI and Suite/Advanced UI)

**Edition** ▪ Support for multilanguage installations is available with InstallShield Premier Edition.

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiLanguage object represents a language whose string entries are included in the project; it provides access to the translated strings.

To include or exclude languages, use the IsIncluded property on each relevant ISWiLanguage object.

## Members

**Table 26** • ISWiLanguage Object Members

Name	Type	Description
<b>AddStringEntry</b>	Method	Adds a new string entry to a language.
<b>DeleteStringEntry</b>	Method	Removes a string entry from the project.
<b>Id</b>	Read-Only String Property	Gets the identifier of the language.
<b>IsIncluded</b>	Read-Write Boolean Property	Includes or excludes a language, or checks its current status.
<b>Name</b>	Read-Only String Property	Gets the name of the current language.

## Applies To

- **ISWiProject**

## AddStringEntry Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddStringEntry method adds a new string entry to a language.

## Syntax

AddStringEntry (StringId) As ISWiStringEntry

## Parameters

**Table 27** ▪ AddStringEntry Method Parameters

Parameter	Description
StringId	Specify the identifier for the string entry.

## Applies To

- [ISWiLanguage](#)

## DeleteStringEntry Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteStringEntry method removes a string entry from the project.

## Syntax

DeleteStringEntry (StringEntry As ISWiStringEntry)

## Parameters

**Table 28** ▪ DeleteStringEntry Method Parameters

Parameter	Description
StringEntry	Specify the ISWiStringEntry object that you want to remove from the project.

## Applies To

- [ISWiLanguage](#)

## ISWiPathVariable Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier* edition of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The `ISWiPathVariable` object represents a path variable that is included in the project. Path variables help make projects' build paths more portable across machines.

To add or remove path variables, call `ISWiProject.AddPathVariable` or `ISWiProject.DeletePathVariable`.

---

**Important** ▪ Predefined path variables cannot be modified or deleted. If you attempt to do so, exception error 3142 occurs. For more information, see [Predefined Path Variables](#).

## Members

**Table 29** • ISWiPathVariable Object Members

Name	Type	Description
<b>Name</b>	Read-Write String Property	Gets or sets the name of the path variable.
<b>PathVarType</b>	Read-Write Integer Property	<p>This enumerated integer property gets or sets the type of the path variable. Available values are:</p> <ul style="list-style-type: none"><li>● <b>epvtPreDefined (1)</b>—Predefined path variables are variables that are set to certain standard Windows directories. These variables cannot be renamed or modified, but they can be used in your installation project to point to predefined directories.</li><li>● <b>epvtCustom (2)</b>—Custom path variables are sometimes referred to as <i>standard path variables</i> or <i>user-defined variables</i>. These variable types are defined through InstallShield. These variables do not rely on any outside sources, such as the registry or system paths.</li><li>● <b>epvtEnvironment (4)</b>—Environment path variables are based on the values of your system's environment variables. You can set an environment path variable in your project to an existing environment variable on your machine.</li><li>● <b>epvtRegistry (8)</b>—Registry path variables enable you to define your own variables based on the default value of a specified registry key. The registry key must already be present when you set a path variable to the value of the key.</li></ul>
<b>TestValue</b>	Read-Write String Property	Gets or sets the test value of the path variable.

**Table 29** ■ ISWiPathVariable Object Members (cont.)

Name	Type	Description
Value	Read-Write String Property	<p>Gets or sets the value of the path variable.</p> <p><b>For Standard Path Variables</b></p> <p>For standard variables, enter the directory to which you would like your variable to point.</p> <div></div> <p><b>Note</b> ■ You can also refer to other path variables in the defined value by enclosing the referenced path variable name in angled brackets. For example, if you have a path variable called <i>MyRoot</i> with a value of <i>C:\</i>, you can refer to it in a path variable definition for another variable, such as <i>Games</i>. The actual path for the <i>Games</i> variable might be <i>C:\Programs\GameFiles</i>, but you can define <i>Games</i> as <i>&lt;MyRoot&gt;\Programs\GameFiles</i>. However, if you attempt to self-reference a path variable, the literal string is used instead. For example, defining <i>Games</i> as <i>&lt;MyRoot&gt;\Programs\&lt;Games&gt;</i> actually results in <i>Games</i> defined as <i>C:\Programs\&lt;Games&gt;</i>.</p>
Value (cont.)		<p><b>For Registry Path Variables</b></p> <p>Enter the complete registry key, with the final “subkey” being the name of the value whose data contains the folder. For example, define <i>MyRegVar</i> as follows:</p> <pre>HKEY_LOCAL_MACHINE\SOFTWARE\TestKey\TestValue</pre> <p>Assume that <i>TestKey</i> has the following subkey and values:</p> <pre>[HKEY_LOCAL_MACHINE\SOFTWARE\TestKey] @="C:\\MyPath1" "TestValue"="C:\\MyPath2" [HKEY_LOCAL_MACHINE\Software\TestKey\TestValue] @="C:\\MyPath3"</pre> <p>Even though <i>HKEY_LOCAL_MACHINE\SOFTWARE\TestKey</i> has a subkey called <i>TestValue</i>, <i>MyRegVar</i> points to the value <i>TestValue</i>, and the current value will be <i>C:\MyPath2</i>. (Note, however, that if a value named <i>TestValue</i> does not exist, <i>InstallShield</i> reads the default value (<i>C:\MyPath3</i>) of the subkey <i>HKEY_LOCAL_MACHINE\SOFTWARE\TestKey\TestValue</i>.)</p> <p><b>For Environment Path Variables</b></p> <p>For environment path variables, enter the name of the variable as it appears on the Environment dialog box.</p>

**Applies To**

- ISWiProject

## ISWiProperty Object (Advanced UI and Suite/Advanced UI)

---

**Project** - This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiProperty object represents an Advanced UI or Suite/Advanced UI property. You can retrieve a property by specifying an item in the ISWiProperties collection.

## Members

**Table 30** • ISWiProperty Object Members

Name	Type	Description
<b>Comments</b>	Read-Write String Property	Gets or sets an internal note about the string entry. The comments are not displayed at run time.
<b>FormatPropertyValue</b>	Read-Write Boolean Property	<p>Gets or sets the check box in the Formatted column in the Property Manager view. The check box that lets you indicate whether the value is a formatted expression that contains property names, environment variable references, or other special strings that you want to be resolved at run time. The run-time resolution occurs early at run time, before the installation executes the actions in the OnBegin event.</p> <p>To leave the property value as is at run time, set this property equal to False. Square brackets and other characters have no special meaning.</p> <p>To replace the formatted expressions at run time, set this property equal to True.</p> <p>To learn about the syntax that is available for formatted expressions, see <a href="#">Using Formatted Expressions that Advanced UI and Suite/Advanced UI Installations Resolve at Run Time</a>.</p>
<b>Name</b>	Read-Write String Property	Gets or sets the name of the Advanced UI or Suite/Advanced UI property.
<b>Value</b>	Read-Write String Property	Gets or sets the value of the Advanced UI or Suite/Advanced UI property.

## Applies To

- ISWiProject

## ISWiSetupFile Object (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSetupFile object represents a support file in your project.

To add or remove support files, call ISWiProject.AddSetupFile or ISWiProject.DeleteSetupFile.

## Members

**Table 31** ▪ ISWiSetupFile Object Members

Name	Type	Description
<b>FileName</b>	Read-only String Property	Gets the name of the support file (without the path).
<b>Language</b>	Read-Write String Property	Gets the string that identifies the language identifier for the support file; for example:  <code>m_pFile.Language = "1033"</code>
<b>Path</b>	Read-only String Property	Gets the fully qualified path (including the file name) of the support file's source location.  Instead of hard-coding a path, you can use a path variable that is defined in the Path Variables view or part of the ISWiPathVariables collection. At build time, InstallShield replaces the path variable with the appropriate value.
<b>Target</b>	Read-Write String Property	Gets or sets the support file's target directory within SETUPSUPPORTDIR. The following line specifies the support file to be stored in the MyFolder1\MyFolder2 folder under SETUPSUPPORTDIR:  <code>m_pFile.Target = "MyFolder1\MyFolder2"</code>

## Applies To

- ISWiProject

## ISWiSuiteAction Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

---

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteAction object represents an action in the Suite/Advanced UI project.

To add or remove actions, call ISWiProject.AddSuiteAction or ISWiProject.DeleteAction. Schedule actions by calling ISWiSuiteEvent.AddSuiteAction Ref or ISWiSuiteEvent.DeleteSuiteActionRef.

Note that some ISWiSuiteAction properties are applicable to only certain action types.

## Members

**Table 32** ▪ ISWiSuiteAction Object Members

Name	Type	Description
<b>AbortCode</b>	Read-Write String Property	 <b>Note</b> ▪ <i>This property applies to .exe actions.</i>  Gets or sets a comma-delimited list of the codes that the action could return when the installation should be aborted. Note that if the action cannot be launched or loaded, the installation is aborted.  This property is available if the value of the action's WaitForExit property is True.
<b>ActionName</b>	Read-Only String Property	Gets or sets the name of the action.
<b>Arguments</b>	Read-Write String Property	 <b>Note</b> ▪ <i>This property applies to .exe actions.</i>  If appropriate, gets or sets the command-line parameters that should be used with the action. Separate multiple parameters with spaces.
<b>CancelCode</b>	Read-Write String Property	 <b>Note</b> ▪ <i>This property applies to .exe actions.</i>  Gets or sets a comma-delimited list of the codes that the action could return when the installation should be cancelled.  This property is available if the value of the action's WaitForExit property is True.
<b>Class</b>	Read-Write String Property	 <b>Note</b> ▪ <i>This property applies to managed-code actions.</i>  Gets or sets the name of the class for the managed method that you want the selected action to call.  To learn more, see <a href="#">Working with a Managed-Code Action in a Suite/Advanced UI Installation</a> .

**Table 32** ▪ ISWiSuiteAction Object Members (cont.)

Name	Type	Description
<b>DefaultResponse</b>	Read-Write Integer Property	 <p><b>Note</b> ▪ <i>This property applies to .exe actions.</i></p> <p>Gets or sets a string that describes how you want the installation to respond if the code that the action returns is not specified for the IgnoreCode, AbortCode, RebootCode, or CancelCode properties. Available values are:</p> <ul style="list-style-type: none"> <li>● <b>esadcIgnore (0)</b>—The installation proceeds with the next part of the installation. This is the default option.</li> <li>● <b>esadcAbort (1)</b>—The installation is aborted.</li> <li>● <b>esadcReboot (2)</b>—The target system is restarted.</li> <li>● <b>esadcCancel (3)</b>—The installation is cancelled.</li> </ul> <p>This property is available if the value of the action's WaitForExit property is True.</p>
<b>FormatPropertyValue</b>	Read-Write Boolean Property	 <p><b>Note</b> ▪ <i>This property applies to actions that set a property.</i></p> <p>Gets or sets the value of the Format Property Value setting in the Events view. This setting lets you indicate whether the value that you enter in the Property Value setting (or through the PropValue property in the automation interface) is a formatted expression that contains property names, environment variable references, or other special strings that you want to be resolved at run time. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>True</b>—Replace the formatted expressions at run time.</li> <li>● <b>False</b>—Leave the property value as is at run time. The value that you are entering does not include formatted expressions.</li> </ul> <p>To learn about the syntax that is available for these expressions, see <a href="#">Using Formatted Expressions that Advanced UI and Suite/Advanced UI Installations Resolve at Run Time</a>.</p>
<b>FunctionName</b>	Read-Write String Property	 <p><b>Note</b> ▪ <i>This property applies to DLL and InstallScript actions.</i></p> <p>For a DLL action: Gets or sets the name of the function in the DLL that you would like to call.</p> <p>For an InstallScript action: Gets or sets the InstallScript function that you want to call.</p>

**Table 32** ▪ ISWiSuiteAction Object Members (cont.)

Name	Type	Description
<b>IgnoreCode</b>	Read-Write String Property	 <p><b>Note</b> ▪ This property applies to .exe actions.</p> <p>Gets or sets a comma-delimited list of the codes that the action could return when the installation should proceed with the next part of the installation.</p> <p>This property is available if the value of the action's WaitForExit property is True.</p>
<b>Method</b>	Read-Write String Property	 <p><b>Note</b> ▪ This property applies to managed-code actions.</p> <p>Gets or sets the public method that you want the selected action to call.</p> <p>To learn more, see <a href="#">Working with a Managed-Code Action in a Suite/Advanced UI Installation</a>.</p>
<b>PropName</b>	Read-Write String Property	 <p><b>Note</b> ▪ This property applies to actions that set a property.</p> <p>Gets or sets the property name.</p>
<b>PropValue</b>	Read-Write String Property	 <p><b>Note</b> ▪ This property applies to actions that set a property.</p> <p>Gets or sets the value of the property.</p> <p>If you select True for the FormatPropertyValue property, the value that you enter can include one or more formatted expressions that contain property names, environment variable references, and other special strings; at run time, the installation expands the values of these expressions. To learn about the syntax that is available for these expressions, see <a href="#">Using Formatted Expressions that Advanced UI and Suite/Advanced UI Installations Resolve at Run Time</a>.</p>
<b>RebootCode</b>	Read-Write String Property	 <p><b>Note</b> ▪ This property applies to .exe actions.</p> <p>Gets or sets a comma-delimited list of the codes that the action could return when the target system should be restarted.</p> <p>This property is available if the value of the action's WaitForExit property is True.</p>

**Table 32** ▪ ISWiSuiteAction Object Members (cont.)

Name	Type	Description
<b>RequireAdminPrivileges</b>	Read-Only Boolean Property	<p>Gets or sets the value of the Requires Administrative Privileges setting in the Events view. This setting indicates whether this action requires administrative privileges on systems that have Windows Vista or later or Windows Server 2008 or later.</p> <p>To learn more, see <a href="#">Minimizing the Number of User Account Control Prompts During Advanced UI and Suite/Advanced UI Installations</a>.</p>
<b>SourcePath</b>	Read-Write String Property	<div>  </div> <p><b>Note</b> ▪ This property applies to PowerShell actions.</p> <p>Gets or sets the source path to the PowerShell script (.ps1) that you want to use for your action.</p> <p>If the file is not present on target systems at run time, and if none of the packages in your Suite/Advanced UI installation are going to install it, you can reference a file that is included in your project as a support file. At run time, the file is available on the target system only during your product's installation process.</p> <p>Instead of hard-coding a location, you can use a path variable that is defined in the Path Variables view. At build time, InstallShield replaces the path variable with the appropriate value.</p>
<b>TargetFile</b>	Read-Write String Property	<div>  </div> <p><b>Note</b> ▪ This property applies to .exe, DLL, and managed-code actions.</p> <p>Gets or sets the run-time path to the file that you want to use for your action.</p> <p>If the file is not present on target systems at run time, and if none of the packages in your Suite/Advanced UI installation are going to install it, you can reference a file that is included in your project as a support file. At run time, the file is available on the target system only during your product's installation process.</p>

**Table 32** ■ ISWiSuiteAction Object Members (cont.)

Name	Type	Description
<b>Type</b>	Read-Only Integer Property	<p>Gets the type of action. Available value are:</p> <ul style="list-style-type: none"> <li>● <b>esatDll (1)</b>—Calls a function in a DLL file.</li> <li>● <b>esatPowerShell (2)</b>—Runs a PowerShell script to perform system configuration tasks.</li> <li>● <b>esatExe (4)</b>—Launches an executable file.</li> <li>● <b>esatSetProperty (16)</b>—Sets a Suite/Advanced UI property.</li> <li>● <b>esatIScript (32)</b>—Runs InstallScript code.</li> <li>● <b>esatClr (64)</b>—Calls a public method in a managed assembly.</li> </ul>
<b>Verb</b>	Read-Write String Property	<div>  </div> <p><b>Note</b> ■ <i>This property applies to .exe actions.</i></p> <p>Gets or sets the verb that should be used with the selected action's file.</p> <p>If you leave this property blank, the verb that is the default one on the target system for this file is used. If the default verb is not available, the <i>open</i> verb is used. If neither verb is available, the first verb that is listed in the registry is used.</p> <p>The use of the <i>runas</i> verb is not recommended. If the action requires administrative privileges, select True for the action's <i>RequireAdminPrivileges</i> property. For more information, see <a href="#">Minimizing the Number of User Account Control Prompts During Advanced UI and Suite/Advanced UI Installations</a>.</p>
<b>WaitForExit</b>	Read-Write Boolean Property	<div>  </div> <p><b>Note</b> ■ <i>This property applies to .exe actions.</i></p> <p>Gets or sets the value of the Wait for Exit setting in the Events view. This setting is where you indicate whether you want the installation to wait for the action to complete before proceeding with the next part of the installation. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>True</b>—The installation waits for the action to complete before resuming. This is the default option.</li> <li>● <b>False</b>—The installation runs the action simultaneously as the next part of the installation proceeds.</li> </ul> <p>If you select True for this setting, you can use the <i>IgnoreCode</i>, <i>AbortCode</i>, <i>RebootCode</i>, and <i>CancelCode</i> properties to specify the various codes that the action may return.</p>

**Table 32** ■ ISWiSuiteAction Object Members (cont.)

Name	Type	Description
Window	Read-Write Integer Property	 <b>Note</b> ■ <i>This property applies to .exe actions.</i>  Gets or sets the initial window state of the .exe action when it is launched. Available options are: <ul style="list-style-type: none"><li>● <b>esawShow (0)</b>—Display the window in its current size and position.</li><li>● <b>esawHide (1)</b>—Hide the window.</li><li>● <b>esawMin (2)</b>—Display the window as minimized.</li><li>● <b>esawMax (3)</b>—Display the window as maximized.</li><li>● <b>esawNormal (4)</b>—Display the window in its original size and position.</li></ul>

## ISWiSuiteActionRef Object (Advanced UI and Suite/Advanced UI)

**Project** ■ *This information applies to Suite/Advanced UI projects.*

**Edition** ■ *The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).*

The ISWiSuiteActionRef object represents a reference to the scheduling of an action during a Suite/Advanced UI event. You can schedule an action multiple times—even in a single event.

To schedule actions, call ISWiSuiteEvent.AddSuiteActionRef. To remove the references to the scheduling of actions, call ISWiSuiteEvent.DeleteSuiteActionRef.

## Members

**Table 33** • ISWiSuiteActionRef Object Members

Name	Type	Description
<b>DisplayText</b>	Read-Write String Property	 <b>Note</b> ▪ This property applies to .exe, DLL, PowerShell, InstallScript, and managed-code actions.  Gets or sets the text that describes the selected action. For example, if the action is running a script that configures the target system, you could enter the following string:  Configuring the system  If the installation launches the action when the InstallationProgress wizard page is displayed, the text that you enter is displayed on the wizard page.
<b>MoveTo</b>	Method	Reschedules a Suite/Advanced UI action to occur directly after the specified other action.
<b>Name</b>	Read-only String Property	Gets the name of the action that is scheduled.

## Applies To

- [ISWiProject](#)

## MoveTo Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The MoveTo method reschedules a Suite/Advanced UI action to occur directly after the specified other action.

## Syntax

MoveTo (PrecedingActionRef As ISWiSuiteActionRef)

## Parameters

**Table 34** • MoveTo Method Parameters

Parameter	Description
<b>PrecedingActionRef</b>	Specifies the action that precedes the action that you want to reschedule. The default value of Nothing indicates the top position.

## Applies To

- [ISWiSuiteActionRef](#)

## ISWiSuiteCondition Object (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteCondition object represents the following types of conditions:

- Exit condition (used for the Condition property of the [ISWiSuiteExitCondition object](#))
- Feature condition (used for the Condition property of the [ISWiSuiteFeature object](#))
- Detection condition (used for the DetectionCondition property of the [ISWiSuitePackage object](#))
- Eligibility condition (used for the EligibleCondition property of the [ISWiSuitePackage object](#))

The ISWiSuiteCondition object can also exist in the Conditions collection of an All, Any, or None condition group.

To add or remove conditions from a condition group, call AddCondition, AddGroup, AddExtensionCondition, or DeleteCondition.

## Members

**Table 35** • ISWiSuiteCondition Object Members

Name	Type	Description
<b>AddCondition</b>	Method	Adds a condition to a condition group.
<b>AddExtensionCondition</b>	Method	Adds an extension condition to a condition group.
<b>AddGroup</b>	Method	Adds an All, Any, or None operator to a setting for a condition group.
<b>AddParameter</b>	Method	Adds a parameter for an extension condition.
<b>ChangeGroupType</b>	Method	Changes the All, Any, or None operator in a condition group.
<b>DeleteCondition</b>	Method	Deletes a condition object.
<b>DeleteParameter</b>	Method	Deletes a parameter for an extension condition.
<b>ISWiSuiteConditionParameters</b>	Collection	Contains all of the settings for a conditional statement.
<b>ISWiSuiteConditions</b>	Collection	Contains all of the conditional statements under a condition group.
<b>Move</b>	Method	Moves a condition or a condition group within a condition tree.
<b>Name</b>	String Property: Read-Write for Extension Conditions; Read-only for all other conditions	For extension conditions: Gets or sets the part of the name of the DLL entry points.  For other condition types: Gets the name of the condition.
<b>Resource</b>	Read-Write String Property	Gets or sets the source of the condition. For extension conditions, the value of this property is set to the name of the DLL file. For the other types of built-in conditions, the value of this property is read-only.

**Table 35** • ISWiSuiteCondition Object Members (cont.)

Name	Type	Description
<b>Type</b>	Read-only Integer Property	<p>Gets the type of condition, condition group, or condition check. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>esctAll (0)</b>—An All condition group operates like a logical AND operation. All of the conditions that are in the All group must evaluate to true in order for the condition group to evaluate to true.</li> <li>● <b>esctAny (1)</b>—An Any condition group operates like a logical OR operation. If any of the conditions that are in the Any group evaluate to true, the entire condition group evaluates to true. If none of the conditions that are in the Any group evaluate to true, the entire condition group evaluates to false.</li> <li>● <b>esctNone (2)</b>—A None condition group operates like a logical NOR operation. If none of the conditions that are in the None group evaluate to true, the entire condition group evaluates to true. If any of the conditions that are in the None condition group evaluate to true, the entire condition group evaluates to false. Note that if the None condition group consists of only one conditional statement, it operates like a logical NOT operation.</li> <li>● <b>esctBuiltin (11)</b>—A built-in condition check has one or more subsettings. Examples of the built-in condition checks are Platform, File Exists, Eligible Package, and Feature Operation.</li> <li>● <b>esctExtension (21)</b>—An extension condition uses a C/C++ DLL that you created to implement your own custom condition that checks target systems for factors that the other types of condition checks do not evaluate.</li> </ul> <p>To identify group conditions, use the following:</p> <p><code>pCondition.Type &lt; 10</code></p>

## Applies To

- ISWiSuiteExitCondition
- ISWiSuiteFeature
- ISWiSuitePackage

## AddCondition Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddCondition method adds a condition to a condition group.

To add an extension condition to a condition group, use the [AddExtensionCondition method](#).

### Syntax

```
AddCondition (ConditionCheckName As String) As ISWiSuiteCondition
```

## Parameters

**Table 36** • AddCondition Method Parameters

Parameter	Description
<b>ConditionCheckName</b>	<p>Specify the name of the type of condition check. Available options are:</p> <ul style="list-style-type: none"><li>● <b>Platform</b>—Check target systems for one or more characteristics such as the operating system version, the architecture, and other platform details on target systems. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Platform Condition Settings</a>.</li><li>● <b>FileExists</b>—Check target systems for the presence of a particular file. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">File Exists Condition Settings</a>.</li><li>● <b>FileValue</b>—Check target systems for specific information—date, version number, or content—for a particular file. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">File Comparison Condition Settings</a>.</li><li>● <b>RegistryExists</b>—Check target systems for the presence of a particular registry key, and optionally a specific value name. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Registry Exists Condition Settings</a>.</li><li>● <b>RegistryValue</b>—Check target systems for specific information—DWORD, QWORD, string, multistring, file version, or product version—for a particular registry entry. If you do not specify a value name, the default value for the key that you specify is used for the comparison. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Registry Comparison Condition Settings</a>.</li><li>● <b>PropertyValue</b>—Check the value of a particular built-in Advanced UI or Suite/Advanced UI property, or a property that is defined in the Property Manager view. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Property Comparison Condition Settings</a>.</li><li>● <b>MsiInstalled</b>—Check target systems for the presence of a product that was installed by a particular .msi package. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">MSI Package Condition Settings</a>.</li><li>● <b>MsiRelated</b>—Check target systems for the presence of a version of a product that you want to update, or for the presence of future versions of a product that you do not want to downgrade. In either case, the product whose presence is being checked is installed by an .msi package. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">MSI Upgrade Condition Settings</a>.</li></ul>

**Table 36** ▪ AddCondition Method Parameters (cont.)

Parameter	Description
<b>ConditionCheckName (cont.)</b>	<ul style="list-style-type: none"> <li>● <b>ParcelRef</b>—Check whether a different package or a feature in the Advanced UI or Suite/Advanced UI installation is eligible for installation on a target system. For example, if a patch package is eligible for installation only if the base package is eligible for installation, you can create an Eligible Package condition to tie the patch's eligibility to the base package's eligibility. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Eligible Package Condition Setting</a>.</li> <li>● <b>IsInstalled</b>—Check target systems for the presence of a product that was installed by a particular InstallScript package. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">InstallScript Package Condition Settings</a>.</li> <li>● <b>Locale</b>—Match one or more locale-related settings on target systems. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Locale Condition Settings</a>.</li> <li>● <b>SuiteInstalled</b>—Check whether a particular version of an Advanced UI or Suite/Advanced UI installation is already installed on a target system. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Suite Installed Condition Settings</a>.</li> <li>● <b>AppxInstalled</b>—Check target systems for the presence of a particular Windows App. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Windows App Package Condition Settings</a>.</li> <li>● <b>ParcelAction</b>—Check the target state of a particular package in the Suite/Advanced UI installation. This type of condition is available only for actions that are associated with an event in the Events view or Packages view. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Package Operation Condition Settings</a>.</li> <li>● <b>FeatureAction</b>—Check the target state of a particular feature in the Suite/Advanced UI installation. This type of condition is available only for actions that are associated with an event in the Events view or Packages view. For descriptions of each of the settings that are displayed for this type of condition check, see <a href="#">Feature Operation Condition Settings</a>.</li> </ul>

**Project** ▪ The *ParcelAction* and *FeatureAction* type of conditions are available in Suite/Advanced UI projects.

## Applies To

- [ISWiSuiteCondition](#)

## AddExtensionCondition Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddExtensionCondition method adds an extension condition to a condition group.

### Syntax

```
AddExtensionCondition (ConditionCheckName As String, Resource as String) As ISWiSuiteCondition
```

### Parameters

**Table 37** ▪ AddExtensionCondition Method Parameters

Parameter	Description
<b>ConditionCheckName</b>	Specify the name of the condition; this is part of the name of the DLL entry points.
<b>Resource</b>	Specify the name of the DLL file. For the other types of built-in conditions.

### Applies To

- [ISWiSuiteCondition](#)

## AddGroup Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddGroup method adds an All, Any, or None operator to a setting for a condition group.

## Syntax

```
AddGroup (GroupType As ISWiSuiteConditionType) As ISWiSuiteCondition
```

## Parameters

**Table 38** • AddGroup Method Parameters

Parameter	Description
<b>GroupType</b>	<p>Specify the operator that you are adding to a setting for a condition group. Available options are:</p> <ul style="list-style-type: none"><li>● <b>esctAll (0)</b>—An All condition group operates like a logical AND operation. All of the conditions that are in the All group must evaluate to true in order for the condition group to evaluate to true.</li><li>● <b>esctAny (1)</b>—An Any condition group operates like a logical OR operation. If any of the conditions that are in the Any group evaluate to true, the entire condition group evaluates to true. If none of the conditions that are in the Any group evaluate to true, the entire condition group evaluates to false.</li><li>● <b>esctNone (2)</b>—A None condition group operates like a logical NOR operation. If none of the conditions that are in the None group evaluate to true, the entire condition group evaluates to true. If any of the conditions that are in the None condition group evaluate to true, the entire condition group evaluates to false. Note that if the None condition group consists of only one conditional statement, it operates like a logical NOT operation.</li></ul>

## Applies To

- **ISWiSuiteCondition**

## AddParameter Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddParameter method adds a parameter for an extension condition to a conditional statement.

## Syntax

```
AddParameter (Name As String) As ISWiSuiteConditionParameter
```

## Parameters

**Table 39** ▪ AddParameter Method Parameters

Parameter	Description
<b>Name</b>	Specify the name of the parameter that you are adding for an extension condition.

## Applies To

- [ISWiSuiteCondition](#)

## ChangeGroupType Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The `ChangeGroupType` method changes the All, Any, or None operator in a condition group.

## Syntax

`ChangeGroupType (GroupType As ISWiSuiteConditionType)`

## Parameters

**Table 40** ▪ ChangeGroupType Method Parameters

Parameter	Description
<b>GroupType</b>	<p>Specify the operator that you want to use for a condition group. Available options are:</p> <ul style="list-style-type: none"><li>● <b>esctAll (0)</b>—An All condition group operates like a logical AND operation. All of the conditions that are in the All group must evaluate to true in order for the condition group to evaluate to true.</li><li>● <b>esctAny (1)</b>—An Any condition group operates like a logical OR operation. If any of the conditions that are in the Any group evaluate to true, the entire condition group evaluates to true. If none of the conditions that are in the Any group evaluate to true, the entire condition group evaluates to false.</li><li>● <b>esctNone (2)</b>—A None condition group operates like a logical NOR operation. If none of the conditions that are in the None group evaluate to true, the entire condition group evaluates to true. If any of the conditions that are in the None condition group evaluate to true, the entire condition group evaluates to false. Note that if the None condition group consists of only one conditional statement, it operates like a logical NOT operation.</li></ul>

## Applies To

- **ISWiSuiteCondition**

## DeleteCondition Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier* edition of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The `DeleteCondition` method removes a condition object (a built-in condition, an extension condition, or a condition group).

## Syntax

`DeleteCondition (pCondition As ISWiSuiteCondition)`

## Parameters

**Table 41** ▪ DeleteCondition Method Parameters

Parameter	Description
<b>pCondition</b>	Specify the ISWiSuiteCondition object for the condition that you want to remove.

## Applies To

- [ISWiSuiteCondition](#)

## DeleteParameter Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteParameter method removes a parameter for an extension condition from a conditional statement.

## Syntax

DeleteParameter (pParam As ISWiSuiteConditionParameter)

## Parameters

**Table 42** ▪ DeleteParameter Method Parameters

Parameter	Description
<b>pParam</b>	Specify the ISWiSuiteConditionParameter object that you want to remove from the conditional statement for an extension condition.

## Applies To

- [ISWiSuiteCondition](#)

## Move Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The Move method moves a condition or a condition group within a condition tree.

## Syntax

Move (Direction As ISWiDirection)

## Parameters

**Table 43** ▪ Move Method Parameters

Parameter	Description
<b>Direction</b>	Specify the direction in which you want to move a condition or a condition group within a condition tree. Available options are: <ul style="list-style-type: none"> <li>• <b>edUp (0)</b>—Move the item up in the condition tree.</li> <li>• <b>edDown (1)</b>—Move the item down in the condition tree.</li> <li>• <b>edLeft (2)</b>—Move the item to the left in the condition tree.</li> <li>• <b>edRight (3)</b>—Move the item to the right in the condition tree.</li> </ul>

## Applies To

- *ISWiSuiteCondition*

# ISWiSuiteConditionParameter Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteConditionParameter object represents a parameter for a condition check. It is the equivalent of the value that is configured in a condition subsetting for a conditional statement. You can retrieve a parameter value by specifying an item in the ISWiSuiteConditionParameters collection.

The ISWiSuiteConditionParameters collection contains all of the available parameters for built-in conditions. To add or remove parameters for an extension condition, call ISWiSuiteCondition.AddParameter or ISWiSuiteCondition.DeleteParameter.

## Members

**Table 44** • ISWiSuiteConditionParameter Object Members

Name	Type	Description
<b>Content</b>	Read-Write String Property	Gets or sets the value of the parameter.
<b>Name</b>	Read-Write String Property	Gets or sets the name of the parameter.  The only time that it is appropriate to customize the Name property is when you are configuring an extension condition in your project.

## Applies To

- [ISWiSuiteCondition](#)

## ISWiSuiteDFLFilter Object (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteDFLFilter object represents a filter for a dynamic link that includes additional files that a package in an Advanced UI or Suite/Advanced UI project requires.

## Members

**Table 45** • ISWiSuiteDFLFilter Object Members

Name	Type	Description
<b>CanMove</b>	Method	Indicates whether a filter can move up or down in the filter criteria; the result is returned as a Boolean value.
<b>ISWiSuiteDFLFilters</b>	Collection	Contains all of the filters that are associated with a dynamic link for the additional files that a package requires.
<b>MoveDown</b>	Method	Moves a filter down below the filter that follows it.
<b>MoveUp</b>	Method	Moves a filter up above its preceding filter.
<b>Pattern</b>	Read-Write String Property	<p>Specify the name of the dynamic folder whose files you want to include or exclude in your dynamic link, or specify the name of a dynamic file that you want to include in your dynamic link.</p> <p>To indicate a wild-card character, use an asterisk (*). For example, to include all .htm files, you could enter *.htm in an <b>Include File</b> setting. To include all files, you could enter *.*.</p> <p>To refer to the root folder (the one that contains the package file) in a path, use a dot and a backslash:</p> <p>. \</p> <p>For example, to refer to a <b>ReadMe.txt</b> file in a subfolder called <b>MyDirectory</b>, where <b>MyDirectory</b> is a subfolder of the folder that contains the package, you could use the following filter:</p> <p>. \MyDirectory\ReadMe.txt</p> <p>For more information, including background on how InstallShield determines which files and folders to include in and exclude from the release, see <a href="#">Defining Filters for a Dynamically Linked Folder in an Advanced UI or Suite/Advanced UI Project</a>.</p>

## Applies To

- [ISWiSuiteDynamicFileLink](#)

## CanMove Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The CanMove method indicates whether a filter can move up or down in the filter criteria; the result is returned as a Boolean value.

## Syntax

CanMove (Direction As ISWiDirection)

## Parameters

**Table 46** - CanMove Method Parameters

Parameter	Description
<b>Direction</b>	Specify one of the following ISWiDirection values to check whether it is possible to move the filter in this direction within the list of filter criteria: <ul style="list-style-type: none"><li>● <b>edUp (0)</b>—Verify whether it is possible to move the filter higher in the list of filter criteria.</li><li>● <b>edDown (1)</b>—Verify whether it is possible to move the filter lower in the list of filter criteria.</li></ul>

## Applies To

- ISWiSuiteDFLFilter

## MoveDown Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The MoveDown method moves a filter down below the filter that follows it.

## Syntax

MoveDown ( )

## Applies To

- [ISWiSuiteDFLFilter](#)

## MoveUp Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The *MoveUp* method moves a filter up above the filter that precedes it.

## Syntax

*MoveUp* ( )

## Applies To

- [ISWiSuiteDFLFilter](#)

## ISWiSuiteDynamicFileLink Object (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The *ISWiSuiteDynamicFileLink* object represents a dynamic link for the additional files that a package in an *Advanced UI* or *Suite/Advanced UI* project requires.

To add or remove dynamic links, call *AddDynamicFileLink* or *DeleteDynamicFileLink*.

## Members

**Table 47** ▪ ISWiSuiteDynamicFileLink Object Members

Name	Type	Description
<b>AddFilter</b>	Method	Adds a filter to a dynamic link for the additional files that a package in an Advanced UI or Suite/Advanced UI project requires.
<b>DeleteFilter</b>	Method	Removes a filter from a dynamic link.
<b>ISWiSuiteDFLFilters</b>	Collection	Contains all of the filters that are associated with a dynamic link for the additional files that a package requires.
<b>Source</b>	Read-Write String Property	<p>Gets or sets the path to the source folder that contains the package that you want to include in your Advanced UI or Suite/Advanced UI project. It also is the source of dynamically included files for the package.</p> <p>Instead of hard-coding a location, you can use a path variable that is defined in the Path Variables view. At build time, InstallShield replaces the path variable with the appropriate value.</p>

## Applies To

- **ISWiSuiteFolder**

## AddFilter Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddFilter method adds a filter to a dynamic link for the additional files that a package requires.

## Syntax

```
AddFilter (FilterType As ISWiSuiteDFLFilterType) As ISWiSuiteDFLFilter
```

## Parameters

**Table 48** • AddFilter Method Parameters

Parameter	Description
<b>FilterType</b>	Specify the type of filter that you want to add to a dynamic link. Available options are: <ul style="list-style-type: none"><li>● <b>esdfIncFolder (301)</b>—Include folders that match the specified filter.</li><li>● <b>esdfExcFolder (302)</b>—Exclude folders that match the specified filter.</li><li>● <b>esdfIncFile (303)</b>—Include files that match the specified filter.</li><li>● <b>esdfExcFile (304)</b>—Exclude files that match the specified filter.</li></ul>

## Applies To

- [ISWiSuiteDynamicFileLink](#)

## DeleteFilter Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteFilter method removes a filter from a dynamic link for the additional files that a package requires.

## Syntax

```
DeleteFilter (Filter As ISWiSuiteDFLFilter)
```

## Parameters

**Table 49** • DeleteFilter Method Parameters

Parameter	Description
<b>Filter</b>	Specify the ISWiSuiteDFLFilter object that you want to remove.

## Applies To

- [ISWiSuiteDynamicFileLink](#)

## ISWiSuiteEvent Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteEvent object represents a Suite/Advanced UI run-time event. Actions that are scheduled for a given event are executed at run time under certain conditions.

### Members

**Table 50** ▪ ISWiSuiteEvent Object Members

Name	Type	Description
<a href="#">AddSuiteActionRef</a>	Method	Schedules a Suite/Advanced UI action during a run-time event.
<a href="#">DeleteSuiteActionRef</a>	Method	Removes an action from a run-time event.
<a href="#">ISWiSuiteActionRefs</a>	Collection	<div><p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p><p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p><p>Contains all of the Suite/Advanced UI actions that are scheduled for a specific event in a package.</p></div>

### Applies To

- [ISWiProject](#)

## AddSuiteActionRef Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- [Advanced UI](#)
- [Suite/Advanced UI](#)

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuiteActionRef method schedules a Suite/Advanced UI action during a run-time event. You can schedule an action to run multiple times during an event if necessary.

## Syntax

AddSuiteActionRef (Action As ISWiSuiteAction)

## Parameters

**Table 51** - AddSuiteActionRef Method Parameters

Parameter	Description
Action	Specify the action to schedule in this event.

## Applies To

- ISWiSuiteEvent

## DeleteSuiteActionRef Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSuiteActionRef method removes a Suite/Advanced UI action from a run-time event.

## Syntax

DeleteSuiteActionRef (ActionRef As ISWiSuiteActionRef)

## Parameters

**Table 52** ▪ DeleteSuiteActionRef Method Parameters

Parameter	Description
<b>ActionRef</b>	Specify the action as an ISWiSuiteActionRef object that you want to delete from an event.

## Applies To

- [ISWiSuiteEvent](#)

## ISWiSuiteExitCondition Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to Suite/Advanced UI projects.

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteExitCondition object represents an exit condition in the Suite/Advanced UI project.

To add or remove exit conditions, call ISWiProject.AddExitCondition or ISWiProject.DeleteExitCondition.

## Members

**Table 53** ▪ ISWiSuiteExitCondition Object Members

Name	Type	Description
<b>Message</b>	Read-Write String Property	Gets or sets the error message that you want the Advanced UI or Suite/Advanced UI installation to display at run time if the conditions that are defined for this message are true.
<b>Condition</b>	Read-only Object Property	<p>This property accesses the <a href="#">ISWiSuiteCondition object</a>.</p> <p>Gets the root-level condition group (Any, All, or Not) that the Advanced UI or Suite/Advanced UI installation evaluates at run time for the exit condition.</p> <p>Exit conditions always have a condition, so there is no need to add a condition.</p>

## Applies To

- [ISWiProject](#)

## ISWiSuiteFeature Object (Advanced UI and Suite/Advanced UI)

---

**Project** - This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteFeature object represents a root-level feature or a subfeature in an Advanced UI or Suite/Advanced UI project. You can retrieve a feature by specifying an item in the ISWiSuiteFeatures collection.

## Members

**Table 54** • ISWiSuiteFeature Object Members

Name	Type	Description
<b>AddCondition</b>	Method	Adds a condition to a feature without a condition.
<b>AddSuiteSubFeature</b>	Method	Adds a subfeature to an existing feature.
<b>AllowSelectionChange</b>	Read-Write Boolean Property	Gets or sets the value of the Allow UI Selection Change setting for the feature. This setting indicates whether end users should be allowed to select or deselect the feature on the InstallationFeatures wizard page.
<b>AttachPackage</b>	Method	Associates a package in the project with a feature.
<b>Condition</b>	Read-only Object Property	This property accesses the <a href="#">ISWiSuiteCondition</a> object.  Gets the feature's condition, if one is associated with the feature.
<b>Cost</b>	Read-Write Property	Gets or sets how much space (in bytes) that the feature requires on the target system.
<b>DeleteCondition</b>	Method	Removes a condition from a feature.
<b>DeleteSubSuiteFeature</b>	Method	Removes a subfeature from a feature.
<b>Description</b>	Read-Write String Property	Gets or sets the description for this feature.
<b>DisplayName</b>	Read-Write String Property	Gets or sets the name of the feature.

**Table 54** • ISWiSuiteFeature Object Members (cont.)

Name	Type	Description
<b>FollowParentState</b>	Read-Write Boolean Property	<p>This property is available for subfeatures; it is not available for root-level features.</p> <p>Gets or sets the value of the Follow Parent State setting for the subfeature. This setting indicates whether you want the subfeature's state to be determined by its parent feature. Available values are:</p> <ul style="list-style-type: none"> <li>● <b>True</b>—The selected subfeature will be installed whenever its parent feature is installed.</li> <li>● <b>False</b>—If the selected subfeature's parent feature is installed, the selected subfeature can be either installed or not installed. This is the default option. Note that if the selected subfeature's parent feature is not installed, the selected subfeature cannot be installed.</li> </ul> <p>This setting is especially useful if you want the subfeature to be hidden on the InstallationFeatures wizard page, but its parent feature is not hidden.</p>
<b>ISWiSuiteFeatures</b>	Collection	Contains all of the subfeatures that are assigned to a feature.
<b>ISWiSuitePackages</b>	Collection	Contains all of the packages that are associated with a feature.
<b>Name</b>	Read-Write String Property	Gets or sets the name of the feature in the collection.
<b>ReleaseFlags</b>	Read-Write String Property	<p>Gets or sets the release flags that are associated with this feature. Separate multiple flags with a comma.</p> <p>You can specify which release flags you want to use to filter the project's features in the ReleaseFlags property of ISWiRelease.</p>
<b>RemovePackage</b>	Method	Removes a package from a feature.
<b>Visible</b>	Read-Write Boolean Property	Gets or sets the feature's Visible setting, which specifies whether the feature will be visible on the InstallationFeatures wizard page during installation.

## Example

The following VBScript lines display information about a feature. Since feature can include subfeatures, the script is implemented recursively.

```
Sub WriteFeature(indent, f)
    out.WriteLine indent & f.DisplayName & " (" & f.Name & ")"
    out.WriteLine indent & "  Release Flags:" & f.ReleaseFlags
    If f.Visible Then out.WriteLine indent & "  Visible"
```

```

If Not f.AllowSelectionChange Then out.WriteLine indent & " Disabled"
If f.FollowParentState Then out.WriteLine indent & " Follow Parent"
If Not f.Condition Is Nothing Then
    out.WriteLine indent & " Condition:"
    WriteCondition indent & " ", f.Condition
End If
out.WriteLine indent & " Packages:"
For Each p in f.Packages
    out.WriteLine indent & " " & IDS(p.DisplayName)
Next
out.WriteLine indent & " Child Features:"
For Each sf in f.SubFeatures
    WriteFeature indent & " ", (sf)
Next
End Sub

```

## Applies To

- [ISWiProject](#)
- [ISWiSuiteFeature](#)

## AddCondition Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddCondition method adds a condition to a feature without a condition.

## Syntax

AddCondition () As ISWiSuiteCondition

## Parameters

The AddCondition method does not take any parameters.

## Applies To

- [ISWiSuiteFeature](#)

## AddSuiteSubFeature Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuiteSubFeature method adds a subfeature to an existing feature in the project.

### Syntax

```
AddSuiteSubFeature (InternalName As String) As ISWiSuiteFeature
```

### Parameters

**Table 55** ▪ AddSuiteSubFeature Method Parameters

Parameter	Description
<b>InternalName</b>	Specify the internal name (which is displayed in the Features pane of the Feature view) of the subfeature that you want to add to the existing feature.

### Applies To

- [ISWiSuiteFeature](#)

## AttachPackage Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AttachPackage method associates a package with a feature in the project.

### Syntax

```
AttachPackage (Package As ISWiSuitePackage)
```

## Parameters

**Table 56** ▪ AttachPackage Method Parameters

Parameter	Description
<b>Package</b>	Specify the ISWiSuitePackage object that you want to be associated with the feature.

## Applies To

- [ISWiSuiteFeature](#)

## DeleteCondition Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteCondition method removes a condition from a feature.

## Syntax

DeleteCondition ()

## Parameters

The DeleteCondition method does not take any parameters.

## Applies To

- [ISWiSuiteFeature](#)

## DeleteSuiteSubFeature Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteSuiteSubFeature method removes a subfeature from a feature in the project.

## Syntax

DeleteSuiteSubFeature (SubFeature As ISWiSuiteFeature)

## Parameters

**Table 57** - DeleteSuiteSubFeature Method Parameters

Parameter	Description
SubFeature	Specify the ISWiSuiteFeature object that you want to remove from the feature.

## Applies To

- [ISWiSuiteFeature](#)

## RemovePackage Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The RemovePackage method removes a package from a feature in the project.

## Syntax

RemovePackage (Package As ISWiSuitePackage)

## Parameters

**Table 58** ▪ RemovePackage Method Parameters

Parameter	Description
<b>Package</b>	Specify the ISWiSuitePackage object that you want to remove from the feature.

## Applies To

- [ISWiSuiteFeature](#)

## ISWiSuiteFile Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteFile object represents a file in a package of an Advanced UI or Suite/Advanced UI project. You can change the file or its source path. The file's other properties are read-only.

## Members

**Table 59** • ISWiSuiteFile Object Members

Name	Type	Description
<b>FullPath</b>	Read-Only String Property	Gets the full path of the file.
<b>LinkPath</b>	Read-Write String Property	Gets or sets the source path to the file.  Instead of hard-coding a path, you can use a path variable that is defined in the Path Variables view or part of the ISWiPathVariables collection. At build time, InstallShield replaces the path variable with the appropriate value.
<b>Modified</b>	Read-Only String Property	Gets the last-modified date of the file.
<b>Name</b>	Read-Write String Property	Gets or sets the name of the file in the package.
<b>Size</b>	Read-only Integer Property	Gets the size of the file.
<b>Version</b>	Read-Only String Property	Gets the version number of the file.

## Applies To

- [ISWiSuiteFolder](#)

## ISWiSuiteFolder Object (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- [Advanced UI](#)
- [Suite/Advanced UI](#)

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuiteFolder object represents a folder of files in a package of an Advanced UI or Suite/Advanced UI project.

## Members

**Table 60** ▪ ISWiSuiteFolder Object Members

Name	Type	Description
<b>AddDynamicFileLink</b>	Method	Adds a dynamic link for the additional files that a package in an Advanced UI or Suite/Advanced UI project requires.
<b>AddFile</b>	Method	Adds a file to a folder in the package.
<b>AddFolder</b>	Method	Adds a subfolder to a folder in the package.
<b>DeleteDynamicFileLink</b>	Method	Removes a dynamic link for the additional files that a package requires.
<b>DeleteFile</b>	Method	Removes a file from a folder in the package.
<b>DeleteFolder</b>	Method	Removes a subfolder from a folder in the package.
<b>ISWiSuiteDynamicFileLinks</b>	Collection	Contains every dynamic file link in a folder in a package of an Advanced UI or Suite/Advanced UI project.
<b>ISWiSuiteFiles</b>	Collection	Contains all of the files in a folder of a package in an Advanced UI or Suite/Advanced UI project.
<b>ISWiSuiteFiles</b>	Collection	Contains all of the files in the folder.
<b>ISWiSuiteFolders</b>	Collection	Contains all of the subfolders in the current folder.
<b>Name</b>	Read-Write String Property	Gets or sets the name of the folder in the package.

## Applies To

- **ISWiSuitePackage**

## AddDynamicFileLink Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddDynamicFileLink method adds a dynamic link for the additional files that a package requires.

## Syntax

AddDynamicFileLink (SourceFolder As String)

## Parameters

**Table 61** - AddDynamicFileLink Method Parameters

Parameter	Description
<b>SourceFolder</b>	<p>Specify the path to the source folder of dynamically included files for the package.</p> <p>Instead of hard-coding a location, you can use a path variable that is defined in the Path Variables view. At build time, InstallShield replaces the path variable with the appropriate value.</p>

## Applies To

- [ISWiSuiteFolder](#)

## AddFile Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- [Advanced UI](#)
- [Suite/Advanced UI](#)

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddFile method adds a file to a folder in a package of an Advanced UI or Suite/Advanced UI project.

## Syntax

AddFile (Name As String) As ISWiSuiteFile

## Parameters

**Table 62** • AddFile Method Parameters

Parameter	Description
Name	Specify the name of the file that you want to add to a folder in a package.

## Applies To

- [ISWiSuiteFolder](#)

## AddFolder Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddFolder method adds a subfolder to a folder in a package of an Advanced UI or Suite/Advanced UI project.

## Syntax

AddFolder (Name As String) As ISWiSuiteFolder

## Parameters

**Table 63** • AddFile Method Parameters

Parameter	Description
Name	Specify the name of the subfolder that you want to add to a folder in a package.

## Applies To

- [ISWiSuiteFolder](#)

## DeleteDynamicFileLink Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- Advanced UI

- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteDynamicFileLink method removes a dynamic link for the additional files that a package requires.

## Syntax

DeleteDynamicFolderLink (DynamicFileLink As ISWiSuiteDynamicFileLink)

## Parameters

**Table 64** ▪ DeleteDynamicFolderLink Method Parameters

Parameter	Description
DynamicFileLink	Specify the ISWiSuiteDynamicFileLink object that you want to remove.

## Applies To

- ISWiSuiteFolder

## DeleteFile Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteFile method removes a file from a folder in a package of an Advanced UI or Suite/Advanced UI project.

## Syntax

DeleteFile (File as ISWiSuiteFile)

## Parameters

**Table 65** • DeleteFile Method Parameters

Parameter	Description
File	Specify the ISWiSuiteFile object that you want to remove.

## Applies To

- [ISWiSuiteFolder](#)

## DeleteFolder Method (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteFolder method removes a subfolder from a folder in a package of an Advanced UI or Suite/Advanced UI project.

## Syntax

DeleteFolder (Name As ISWiSuiteFolder)

## Parameters

**Table 66** • DeleteFile Method Parameters

Parameter	Description
Name	Specify the ISWiSuiteFolder object that you want to remove.

## Applies To

- [ISWiSuiteFolder](#)

## ISWiSuiteOperation Object (Advanced UI and Suite/Advanced UI)

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ *The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).*

The ISWiSuiteOperation object represents an operation on a package.

Note that some ISWiSuiteOperation items are not applicable to all types of Advanced UI or Suite/Advanced UI package files.

## Members

**Table 67** ▪ ISWiSuiteOperation Object Members

Name	Type	Type of Package File	Description
<b>CmdLine</b>	Read-Write String Property	.msi, .msp, .exe, InstallScript, Basic MSI project, InstallScript project	<p>If applicable, gets or sets the command line that should be used to launch the target file whenever the Advanced UI or Suite/Advanced UI installation is running with a user interface. Do not include the name of the file in this property.</p> <p>The value of this property can include one or more formatted expressions that contain property names, environment variable references, and other special strings; at run time, the installation expands the values of these expressions. To learn about the syntax that is available for these expressions, see <a href="#">Using Formatted Expressions that Advanced UI and Suite/Advanced UI Installations Resolve at Run Time</a>.</p> <p>For more information, including valid types of entries for this property, see <a href="#">Passing Command-Line Parameters to a Package in an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>Enable</b>	Read-Write Boolean Property	Support varies	Gets or sets a value to indicate whether an operation for a package is enabled.

**Table 67** ▪ ISWiSuiteOperation Object Members (cont.)

Name	Type	Type of Package File	Description
<b>ExitBehavior</b>	Read-Write Integer Property	.exe	<p>If a detection condition is still not met on a target system after the package has been run, either one of the following may be true:</p> <ul style="list-style-type: none"> <li>• The executable file package was not run successfully.</li> <li>• The detection conditions that were specified for the package were not accurate.</li> </ul> <p>For example, a detection condition may indicate that the executable file needs to be launched if a particular file does not exist on the target system. If the file is still missing even after the Advanced UI or Suite/Advanced UI installation has run the executable file package, it is possible that the condition was created erroneously.</p> <p>The ExitBehavior property indicates the behavior that should occur if one or more of the detection conditions still indicate that the package needs to be launched. Available options are:</p> <ul style="list-style-type: none"> <li>• <b>epseDetectPrompt (0)</b>—Ask whether to continue the setup.</li> </ul> <p>The Advanced UI or Suite/Advanced UI installation displays a message box that prompts the end user to specify whether the Advanced UI or Suite/Advanced UI installation should continue.</p> <ul style="list-style-type: none"> <li>• <b>epseDetectAbort (1)</b>—Abort the setup.</li> </ul> <p>The Advanced UI or Suite/Advanced UI installation ends without proceeding further.</p> <ul style="list-style-type: none"> <li>• <b>epseDetectIgnore (2)</b>—Continue the setup.</li> </ul> <p>The Advanced UI or Suite/Advanced UI installation essentially ignores the executable file's unmet condition and proceeds to the next package in the installation (if one is required).</p>
<b>ForceApplicationShutdown</b>	Read-Write Boolean Property	.appx	<p>If the selected sideloading app package (or any package that depends on this package) is in use at installation run time, you can require that the processes that are associated with the package are forced to shut down so that registration can proceed. Use this property to indicate whether you want to force application shutdown in that scenario.</p>

**Table 67** ▪ ISWiSuiteOperation Object Members (cont.)

Name	Type	Type of Package File	Description
<b>RebootCode</b>	Read-Write String Property	.exe	<p>If the selected package requires that the target system be restarted after the product is installed, this property gets or sets one or more return codes. If multiple return codes exist, each one separated by a comma.</p> <p>For more information on Advanced UI or Suite/Advanced UI packages that require a restart, see <a href="#">Restarting a Target System for an Advanced UI or Suite/Advanced UI Package</a>.</p>
<b>RebootRequest</b>	Read-Write String Property	.msi, .msp, .exe, InstallScript, Basic MSI project, InstallScript project	<p>The installation of an Advanced UI or Suite/Advanced UI package may require that the target system be restarted, as described in <a href="#">Restarting a Target System for an Advanced UI or Suite/Advanced UI Package</a>.</p> <p>The RebootRequest property indicates the behavior that should occur if the package requires that a target system be restarted. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>epsrDetectExit (1)</b>—Allow the machine to reboot.</li> <li>● <b>epsrDetectReboot (2)</b>—Prompt, then exit or reboot the machine.</li> <li>● <b>epsrDetectIgnore (4)</b>—Ignore the reboot request.</li> <li>● <b>epsrAlwaysRebootPrompt (8)</b>—Always prompt, then exit or reboot the machine.</li> <li>● <b>epsrAlwaysRebootSilent (16)</b>—Always reboot the machine.</li> <li>● <b>epsrDetectDelay (32)</b>—Delay the prompt, then exit or reboot the machine.</li> </ul>

**Table 67** ▪ ISWiSuiteOperation Object Members (cont.)

Name	Type	Type of Package File	Description
<b>Silent</b>	Read-Write String Property	.msi, .msp, .exe, InstallScript, Basic MSI project, InstallScript project	<p>If applicable, gets or sets the command line that should be used to launch the target file whenever the Advanced UI or Suite/Advanced UI installation is running silently (that is, without a user interface). Do not include the name of the file in this property.</p> <p>The value of this property can include one or more formatted expressions that contain property names, environment variable references, and other special strings; at run time, the installation expands the values of these expressions. To learn about the syntax that is available for these expressions, see <a href="#">Using Formatted Expressions that Advanced UI and Suite/Advanced UI Installations Resolve at Run Time</a>.</p> <p>For more information, including valid types of entries for this property, see <a href="#">Passing Command-Line Parameters to a Package in an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>Target</b>	Read-Write String Property	Support varies	<p>Gets or sets the file in the package that the Advanced UI or Suite/Advanced UI installation should invoke.</p> <p>This property is available in the following scenarios:</p> <ul style="list-style-type: none"> <li>• When the Type property is esotInstall (1) and the type of package file is .msi, .msp, .exe, and InstallScript packages</li> <li>• When the Type property is esotRemove (2), esotRepair (3), or esotModify (4), and the type of package file is .exe packages</li> </ul>

**Table 67** ▪ ISWiSuiteOperation Object Members (cont.)

Name	Type	Type of Package File	Description
<b>Type</b>	Read-only String Property	Support varies	<p>Gets the type of operation. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>esotInstall (1)</b>—The package is launched as a first-time installation.</li> </ul> <p>This operation is available for the following types of package files: .msi, .msp, .exe, .appx, InstallScript, Basic MSI project, and InstallScript project.</p> <li>● <b>esotRemove (2)</b>—The product that the package installed is removed.</li> <p>This operation is available for the following types of package files: .msi, .exe, .appx, InstallScript, Basic MSI project, and InstallScript project.</p> <li>● <b>esotRepair (3)</b>—The product that the package installed is repaired.</li> <p>This operation is available for the following types of package files: .msi, .exe, InstallScript, Basic MSI project, and InstallScript project.</p> <li>● <b>esotModify (4)</b>—The package is launched in maintenance mode to enable end users to install, remove, or modify the product.</li> <p>This operation is available for the following types of package files: .msi, .msp, .exe, InstallScript, Basic MSI project, and InstallScript project.</p>

## Applies To

- ISWiSuitePackage

## ISWiSuitePackage Object (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiSuitePackage object represents a package or a Windows Installer transaction that is included in an Advanced UI or Suite/Advanced UI project.

To add or remove packages and transactions, call ISWiProject.AddSuitePackage or ISWiProject.DeleteSuitePackage.

---

**Important** • Note that some ISWiSuitePackage items are not applicable to all types of Advanced UI or Suite/Advanced UI package files. Use the PackageType property to determine the package type. If one of the other ISWiSuitePackage properties returns an empty value, that property is not applicable to that package type.

Also note that the Advanced UI project type, which is available in the InstallShield, does not have support for most of the types of package files; the only ones that it does support are .msi, msp, and InstallScript packages.

## Members

**Table 68** • ISWiSuitePackage Object Members

Name	Type	Type of Package File	Description
<b>AddDetectCondition</b>	Method	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Adds a detection condition to a package in an Advanced UI or Suite/Advanced UI project.
<b>AddEligibleCondition</b>	Method	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Adds an eligibility condition to a package in an Advanced UI or Suite/Advanced UI project.
<b>AddSuitePackage</b>	Method	.msi, .msp	<div>  <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p> </div> <div>  <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> </div> <p>Adds an .msi or .msp package to a Windows Installer transaction.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>CachePath</b>	Read-Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<p>Gets or sets where the cached package and other package files should be stored on the end user's system. You can enter a hard-coded value such as <b>C:\CachedFiles</b>, but it is recommended that you use a destination property for the path. The default value is as follows:</p> <p><b>[LocalAppDataFolder]Downloaded Installations</b></p> <p>The Setup.exe tab in the Releases view lets you specify whether you want to cache the packages on target systems for any packages that are run on target systems and that have a cache path defined. If you are building an uncompressed release, you may want to avoid caching packages on the target system.</p> <p>The value of this property can include one or more formatted expressions that contain property names, environment variable references, and other special strings; at run time, the installation expands the values of these expressions. To learn about the syntax that is available for these expressions, see <a href="#">Using Formatted Expressions that Advanced UI and Suite/Advanced UI Installations Resolve at Run Time</a>.</p>
<b>CerFile</b>	Read-Write String Property	.appx	<div>  <p><b>Project</b> • This is available in Suite/Advanced UI projects.</p> </div> <div>  <p><b>Edition</b> • The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> </div> <p>Gets or sets the .cer file that you are using in your sideloading package.</p> <p>The versions of Windows that support Windows App packages do not install a sideloading Windows App package unless they trust the source of the package. If you are using a custom certificate, such as the one that is generated in Visual Studio, the Suite/Advanced UI installation can make Windows trust the source of your package by adding the custom certificate to the certificate store of target systems.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>DeleteCondition</b>	Method	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Removes a detection or eligibility condition from a package.
<b>DetectCondition</b>	Read-only Object Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	This property accesses the <b>ISWiSuiteCondition</b> object.  Gets or sets the conditions that the Advanced UI or Suite/Advanced UI installation should use to evaluate whether the package is already installed on target systems.
<b>DisplayName</b>	Read- Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Gets or sets the name that is displayed for the package at run time.
<b>DynamicParcelProduct Config</b>	Read- Write String Property	Basic MSI project	 <b>Project</b> • This is available in Suite/Advanced UI projects.   <b>Edition</b> • The Suite/Advanced UI project type is available in the Premier edition of InstallShield.  Gets or sets the path to the product configuration that contains the release in the InstallShield project that you want to associate with the selected package.

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>DynamicParcelRelease</b>	Read-Write String Property	Basic MSI project, InstallScript project	 <b>Project</b> ▪ This is available in Suite/Advanced UI projects.  <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield. Gets or sets the release in the InstallShield project that you want to associate with the selected package.
<b>DynamicParcelSourcePath</b>	Read-Write String Property	Basic MSI project, InstallScript project	 <b>Project</b> ▪ This is available in Suite/Advanced UI projects.  <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield. Gets or sets the source path of the Basic MSI or InstallScript project (.ism) that you are including in the Suite/Advanced UI project.
<b>Elevate</b>	Read-Write Boolean Property	.msi, .msp, .exe, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Gets or sets the value of the Require Elevated Privileges setting in the Packages view. This setting indicates whether the package requires elevation on Windows Vista and later and Windows Server 2008 and later systems.
<b>EligibleCondition</b>	Read-only Object Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	This property accesses the <a href="#">ISWiSuiteCondition</a> object. Gets or sets the conditions that the Advanced UI or Suite/Advanced UI installation should use to determine whether the target system meets the requirements that are necessary for the package to be run.

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>IsPrimary</b>	Read-Write Boolean Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	 <p><b>Project</b> • In Suite/Advanced UI projects, this property is available for edit. In Advanced UI projects, this setting is read-only, since an Advanced UI project has support for only one primary package.</p> <p>Gets or sets the Package Type setting for a package in the Packages view. This setting identifies whether the presence of this package on the target system should influence whether the Suite/Advanced UI installation runs in first-time-installation mode or maintenance mode.</p> <p>Available options for this property are:</p> <ul style="list-style-type: none"> <li>• <b>True</b>—The selected package is a primary package; that is, a main part of the Advanced UI or Suite/Advanced UI installation.</li> </ul> <p>At run time, if all of the primary packages in the installation are absent from the target system, the installation runs as a first-time installation. If any of the primary packages are present on the target system, the installation runs in maintenance mode.</p> <ul style="list-style-type: none"> <li>• <b>False</b>—The selected package is a dependency package; that is, it should not be a factor in determining which mode is used to run the Advanced UI or Suite/Advanced UI installation.</li> </ul>
<b>ISWiSuiteActionRefs</b>	Collection	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	 <p><b>Project</b> • This is available in Suite/Advanced UI projects.</p>  <p><b>Edition</b> • The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Contains all of the Suite/Advanced UI actions that are scheduled for a specific package event.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>ISWiSuiteEvents</b>	Collection	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<div>  <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p> </div> <div>  <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> </div> <p>Contains all of the events that are associated with a package in a project.</p>
<b>ISWiSuiteFolders</b>	Collection	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Contains every folder in a package of your project.
<b>ISWiSuitePackages</b>	Collection	transaction	Contains every package (as an ISWiSuitePackage object) in a Windows Installer transaction.

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>LoggingCmdLine</b>	Read-Write String Property	.exe, InstallScript, InstallScript project	<p>This property is available if the value of the LoggingEnable property is True.</p> <p>Gets or sets the value of the Logging Command Line setting in the Packages view. This setting indicates the command line that the Advanced UI or Suite/Advanced UI installation should pass to the .exe package to enable the logging. Include any appropriate supported flags. If the .exe package that you are configuring supports it, include a path that references the Advanced UI or Suite/Advanced UI property ISLogDir, enclosed within square brackets, in place of the path to the directory where the log file should be created.</p> <p>For example, to generate a log file that logs everything verbosely for an .msi package that is run by a Setup.exe file that InstallShield built, enter the following command line:</p> <pre>/v"/1*v "[ISLogDir]FileName.log\ ""</pre> <p>The Advanced UI or Suite/Advanced UI installation replaces [ISLogDir] with the path to the folder that will contain the log file. The Advanced UI or Suite/Advanced UI /log command-line parameter lets end users specify the path to the directory for the package log files.</p> <p>For more information, see <a href="#">Supporting the Creation of Package Log Files for Command-Line Launching of an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>LoggingEnable</b>	Read-Write Boolean Property	.msi, .msp, .exe, InstallScript, Basic MSI project, InstallScript project	<p>Gets or sets the Enable Logging Support setting in the Packages view. This setting indicates whether you want the package to generate a log file if the Advanced UI or Suite/Advanced UI installation is launched from the command line with the /log command-line parameter. Note that if a package does not have support for logging, it is recommended that you do not enable logging support for that package.</p> <p>If you select Yes, configure the other logging-related properties as needed.</p> <p>For more information, see <a href="#">Supporting the Creation of Package Log Files for Command-Line Launching of an Advanced UI or Suite/Advanced UI Installation</a>.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>LoggingMsiLogFile</b>	Read-Write String Property	.msi, .msp, Basic MSI project	<p>This property is available if the value of the LoggingEnable property is True.</p> <p>Gets or sets the value of the Logging Command Line setting in the Packages view. This setting indicates a name for the log file. Do not include a path for the file; the Advanced UI or Suite/Advanced UI /log command-line parameter lets end users specify the directory for the package log files.</p> <p>If you leave this setting blank, the name of the log file that the installation creates is <i>PackageGUID.log</i>, where <i>PackageGUID</i> is the GUID that is assigned to the package in the Package GUID setting in the Packages view.</p> <p>For more information, see <a href="#">Supporting the Creation of Package Log Files for Command-Line Launching of an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>LoggingMsiLogOptions</b>	Read-Write String Property	.msi, .msp, Basic MSI project	<p>This property is available if the value of the LoggingEnable property is True.</p> <p>Gets or sets the value of the Log Options setting in the Packages view. This setting indicates the Windows Installer log /L flags that you want the package to use when generating the log file. For example, to generate a log file that logs everything verbosely, enter the following in this setting:</p> <p><b>*v</b></p> <p>For additional valid flags, see the <a href="#">/L description</a>.</p> <p>If you leave this setting blank, the asterisk (*) and v flags are used to generate the log file.</p> <p>For more information, see <a href="#">Supporting the Creation of Package Log Files for Command-Line Launching of an Advanced UI or Suite/Advanced UI Installation</a>.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>MoveDown</b>	Method	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project, transaction	If your project has more than one package or transaction, the Packages view lists them in the same order in which the Advanced UI or Suite/Advanced UI installation launches them at run time. The MoveDown method moves a package or transaction down in the ordered list, below the item that follows it.
<b>MoveUp</b>	Method	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project, transaction	If your project has more than one package or transaction, the Packages view lists them in the same order in which the Advanced UI or Suite/Advanced UI installation launches them at run time. The MoveUp method moves a package or transaction up in the ordered list, above the item that precedes it.
<b>Name</b>	Read-Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	Gets or sets the internal name of the package.

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>Operation</b>	Read-only Object Property	Support varies	<p>This property accesses the ISWiSuiteOperation object.</p> <p>Gets the operation of the specified type. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>esotInstall (1)</b>—The package is launched as a first-time installation.</li> </ul> <p>This operation is available for the following types of package files: .msi, .msp, .exe, .appx, InstallScript, Basic MSI project, and InstallScript project.</p> <li>● <b>esotRemove (2)</b>—The product that the package installed is removed.</li> <p>This operation is available for the following types of package files: .msi, .exe, .appx, InstallScript, Basic MSI project, and InstallScript project.</p> <li>● <b>esotRepair (3)</b>—The product that the package installed is repaired.</li> <p>This operation is available for the following types of package files: .msi, .exe, InstallScript, Basic MSI project, and InstallScript project.</p> <li>● <b>esotModify (4)</b>—The package is launched in maintenance mode to enable end users to install, remove, or modify the product.</li> <p>This operation is available for the following types of package files: .msi, .msp, .exe, InstallScript, Basic MSI project, and InstallScript project.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>PackageLocation</b>	Read-Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<p>This property accesses the ISWiPackageLoc object.</p> <p>Gets or sets where the package is configured to be located. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>eplSourceMedia (0)</b>—Copy from source media. That is, store the package and its files on the source media.</li> <li>● <b>eplSetupExe (1)</b>—Extract from Setup.exe. That is, compress the package and its files into Setup.exe, to be extracted at run time, if necessary.</li> <li>● <b>eplWeb (2)</b>—Download from the Web. That is, download the package and its files (if necessary) from the URL that is specified for the package.</li> </ul> <p>If the Advanced UI or Suite/Advanced UI installation will be run uncompressed from fixed media—such as CD, DVD, or local network—use this option.</p> <p>If the entire Advanced UI or Suite/Advanced UI installation must be self-contained in Setup.exe, use this option. Note that the Web option results in smaller installations and shorter download time; however, the Setup.exe option provides for a completely self-contained installation.</p> <p>This option is recommended if your installation will be downloaded from the Internet and you want to minimize the Advanced UI or Suite/Advanced UI package size and download time. An Advanced UI or Suite/Advanced UI package is not downloaded if the correct version is already present on the target system.</p> <p>Note that you can override this property for all packages when you are configuring a release.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>PackageType</b>	Read-only String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<p>Gets the type of package in the project:</p> <ul style="list-style-type: none"> <li>● <b>esptTransaction (-1)</b>—Windows Installer transaction</li> <li>● <b>esptMsi (1)</b>—Windows Installer package (.msi)</li> <li>● <b>esptMsp (2)</b>—Windows Installer patch (.msp)</li> <li>● <b>esptExe (3)</b>—executable package (.exe)</li> <li>● <b>esptIsip (4)</b>—InstallScript package</li> <li>● <b>esptIsMsi (5)</b>—Basic MSI project (.ism)</li> <li>● <b>esptIsMIsip (6)</b>—InstallScript project (.ism)</li> <li>● <b>esptAppx (7)</b>—Sideloaded app package (.appx)</li> <li>● <b>esptWebDeploy (8)</b>—Web Deploy package (.zip)</li> </ul>
<b>PackageURL</b>	Read-Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<p>Gets or sets the URL for the root folder that will contain the selected package and its folders and files. The package and any accompanying files are downloaded from this location to target systems at run time if the package needs to be launched.</p> <p>This property is applicable if the value of the PackageLocation property is eplWeb (2).</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>ParcelType</b>	Read-Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<div>  </div> <p><b>Project</b> • In Suite/Advanced UI projects, this property is available for edit. In Advanced UI projects, this property is read-only, since an Advanced UI project has support for only one primary package.</p> <p>Gets the type of package that identifies whether the presence of this package on the target system should influence whether the Suite/Advanced UI installation runs in first-time-installation mode or maintenance mode.</p> <p>Available options for this setting are:</p> <ul style="list-style-type: none"> <li>● <b>espltPrimary (0)</b>—The selected package is a main part of the Advanced UI or Suite/Advanced UI installation.</li> </ul> <p>At run time, if all of the primary packages in the installation are absent from the target system, the installation runs as a first-time installation. If any of the primary packages are present on the target system, the installation runs in maintenance mode.</p> <ul style="list-style-type: none"> <li>● <b>espltDependency (1)</b>—The selected package should not be a factor in determining which mode is used to run the Advanced UI or Suite/Advanced UI installation.</li> </ul> <p>For more information, see <a href="#">Primary Packages vs. Dependency Packages in Advanced UI and Suite/Advanced UI Projects</a>.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>ProgressCapture</b>	Read-Write String Property	.msi, .msp, Basic MSI project	<p>Gets or sets the value of the Status Messages Reporting setting in the Packages view. This setting indicates what sort of status messages are available for displaying in the user interface of the Advanced UI or Suite/Advanced UI installation. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>epsptCaptureFull (3)</b>—Action text. The Advanced UI or Suite/Advanced UI installation’s status messages include the action text from the standard actions and custom actions in the package.</li> <li>● <b>epsptCaptureFullVerbose (4)</b>—Action text and action data. The Advanced UI or Suite/Advanced UI installation’s status messages include the action text as well as action data from the standard actions and custom actions in the package.</li> </ul> <p>At run time, the Advanced UI or Suite/Advanced UI installation updates the ISParcelStatus property with the action text and, if applicable, the action data in the ISParcelStatus property, which is displayed on the InstallationProgress wizard page of the Advanced UI or Suite/Advanced UI installation by default.</p> <p>For example, when the InstallFiles action in an .msi package is executing, the ISParcelStatus property is updated with the action text “Copying new files” to inform end users about the current progress of the installation. If you choose to include action data in the status messages, the ISParcelStatus property may also be updated with action data such as the name, directory, and size of each file as it is being installed on the target system.</p>
<b>ReleaseFlags</b>	Read-Write String Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<p>Gets or sets the release flags that are assigned to the package. Separate multiple flags with a comma.</p> <p>You can use release flags to selectively include and exclude this package from different builds of your Advanced UI or Suite/Advanced UI installation.</p>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>RootFolder</b>	Read-only Object Property	.msi, .msp, .exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	This property accesses the ISWiSuiteFolder object.  Gets the root folder that contains the package and its folders and files.
<b>SharedParckage</b>	Read-Write Boolean Property	.msi, .msp, .exe, .appx, InstallScript, Basic MSI project, InstallScript project	Gets or sets the value for the Shared setting in the Packages view. This setting indicates whether the package is shared with other products and should be removed only if no other products that are left behind are using this package.

**Table 68** ▪ ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>UpgradeType</b>	Read-Write String Property	.msi, Basic MSI project	<p>Gets or sets the value of the Minor Upgrade Handling setting in the Packages view. This setting indicates the behavior that should occur when an earlier version of the package is present on the target system. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>epsutNone (0)</b>—None. The Advanced UI or Suite/Advanced UI installation launches the package without running it in minor upgrade mode. That is, the Advanced UI or Suite/Advanced UI installation does not set the REINSTALL or REINSTALLMODE properties for the package.</li> <li>● <b>epsutAuto (1)</b>—Automatic. The Advanced UI or Suite/Advanced UI installation launches the package in upgrade mode by setting the REINSTALL property to <i>ALL</i> and the REINSTALLMODE property to <i>nomus</i>. It does not inform the end user that the product will be upgraded.</li> <li>● <b>epsutPrompt (2)</b>—Ask the user. The Advanced UI or Suite/Advanced UI installation displays a secondary window that asks the end user whether they want to continue. If the end user chooses to continue, the Advanced UI or Suite/Advanced UI installation launches the package in upgrade mode. If the end user chooses to not continue, the package does not run.</li> </ul>

**Table 68** • ISWiSuitePackage Object Members (cont.)

Name	Type	Type of Package File	Description
<b>WindowsFeatures</b>	Read-Write	.msi, .msp,	
	String Property	.exe, .appx, InstallScript, Web Deploy, Basic MSI project, InstallScript project	<p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p> <hr/> <p> <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Gets or sets a semicolon-delimited list of one or more Windows roles and features that the selected package requires be enabled on target systems that have Windows Vista or later or Windows Server 2008 or later.</p> <p>The names of the roles and features should be the string that tools such as Deployment Image Servicing and Management (DISM.exe) and Package Manager (Pkgmgr.exe) use to identify the role or feature on a particular version of Windows. For a list of available Windows roles and features on each version of Windows for which you are supporting, see <a href="#">Microsoft TechNet</a>.</p> <p>At run time, if this package is eligible to be installed and it requires one or more Windows roles and features that are disabled, the Suite/Advanced UI installation enables them before launching the package.</p> <p>For more information, see <a href="#">Enabling Windows Roles and Features During a Suite/Advanced UI Installation</a>.</p>

## Example

The following VBScript lines demonstrate how to display information about a package in a project. Windows Installer transactions can contain multiple packages, so the script is implemented recursively.

```
Sub WritePackage(indent, p)
    If p.PackageType = -1 Then ' Transaction
        out.WriteLine indent & "Transaction:"
        For Each sp In p.ISWiSuitePackages
            WritePackage indent & " ", sp
        Next
    Else
        out.WriteLine indent & IDS(p.DisplayName) & " (" & p.Name & ")"
        out.WriteLine indent & "Type: " & p.PackageType
        out.WriteLine indent & "Description: " & p.Description
        out.WriteLine indent & "Shared: " & p.SharedPackage
        out.WriteLine indent & "Location: " & p.PackageLocation & " " & p.PackageUrl
        out.WriteLine indent & "Release Flags: " & p.ReleaseFlags
    End If
End Sub
```

```

        out.WriteLine indent & "Files:"
        WriteFolder indent & " ", p.RootFolder
        out.WriteLine indent & "Detection Condition:"
        WriteCondition indent & " ", p.DetectCondition
        out.WriteLine indent & "Eligibility Condition:"
        WriteCondition indent & " ", p.EligibleCondition
    End If
End Sub

```

## Applies To

- [ISWiProject](#)

## AddDetectCondition Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddDetectCondition method adds a detection condition to a package in an Advanced UI or Suite/Advanced UI project.

The detection condition is a condition that the Advanced UI or Suite/Advanced UI installation should use to evaluate whether the package is already installed on target systems. If this does not change from false to true (or from true to false) at run time, the Advanced UI or Suite/Advanced UI installation assumes that the package failed to install (or remove) its payload. In addition, subsequent maintenance and remove operations (or subsequent maintenance and install operations) may not behave as expected.

## Syntax

AddDetectCondition () As ISWiSuiteCondition

## Parameters

The AddDetectCondition method does not take any parameters.

## Applies To

- [ISWiSuitePackage](#)

## AddEligibleCondition Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddEligibleConditionPackage method adds an eligibility condition to a package in an Advanced UI or Suite/Advanced UI project.

The eligibility condition is a condition that the Advanced UI or Suite/Advanced UI installation should use to determine whether the target system meets the requirements that are necessary for the package to be run. For example, if the package should be run only on 64-bit systems, you could set up an x64 platform requirement in a condition; the Advanced UI or Suite/Advanced UI installation would launch the package only on 64-bit systems. You may also want to set up an eligibility condition to prevent end users from being able to install the current package version over a future newer version.

### Syntax

```
AddEligibleCondition () As ISWiSuiteCondition
```

### Parameters

The AddEligibleConditionPackage method does not take any parameters.

### Applies To

- [ISWiSuitePackage](#)

## AddSuitePackage Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to Suite/Advanced UI projects.

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The AddSuitePackage method adds a package (an .msi package or an .msp patch) to a Windows Installer transaction in the project. It also adds the specified target file and options for adding additional files. Using this method is similar to adding a package to a transaction in the Packages view in InstallShield. You can set the properties of the new package with the ISWiSuitePackage object.

To add other types of packages to the project, see [AddSuitePackage Method \(Advanced UI and Suite/Advanced UI\)](#).

## Syntax

```
AddSuitePackage (PackageType As ISWiSuitePackageType, TargetFileName As String, AdditionalFiles As ISWiAdditionalFiles) As ISWiSuitePackage
```

## Parameters

**Table 69** ▪ AddSuitePackage Method Parameters

Parameter	Description
<b>PackageType</b>	Specify the type of package that you are adding to the transaction. Available options are: <ul style="list-style-type: none"><li>● <a href="#">esptMsi (1)</a>—Windows Installer package (.msi)</li><li>● <a href="#">esptMsp (2)</a>—Windows Installer patch (.msp)</li></ul>
<b>TargetFileName</b>	Specify the file in the package (such as the .msi file) that the Advanced UI or Suite/Advanced UI installation should invoke.
<b>AdditionalFiles</b>	Specify the type of additional files that you want to add for the package. Available options are: <ul style="list-style-type: none"><li>● <a href="#">eaftNothing (0)</a>—Add nothing. This package does not need any additional files.</li><li>● <a href="#">eaftAdjacentFiles (1)</a>—Add adjacent files; that is, add the files next to this package.</li><li>● <a href="#">eaftSubFolders (2)</a>—Add files in subfolders; that is, add the files below this package.</li><li>● <a href="#">eaftAdjacentFilesAndSubFolders (3)</a>—Add adjacent files and files in subfolders; that is, add the files next to and below this package.</li></ul>

## Applies To

- [ISWiSuitePackage](#)

## DeleteCondition Method (Advanced UI and Suite/Advanced UI)

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The DeleteCondition method removes a detection or eligibility condition from a package in an Advanced UI or Suite/Advanced UI project.

## Syntax

DeleteCondition (pCondition As ISWiSuiteCondition)

## Parameters

**Table 70** - DeleteCondition Method Parameters

Parameter	Description
pCondition	Specify the ISWiSuiteCondition object for the condition that you want to remove. The ISWiSuiteCondition object that you specify should be the condition object that is returned from the package's EligibleCondition property or its DetectionCondition property.

## Applies To

- [ISWiSuitePackage](#)

## MoveDown Method (Advanced UI and Suite/Advanced UI)

**Project** - This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** - The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

If your project has more than one package or transaction, the Packages view lists them in the same order in which the Advanced UI or Suite/Advanced UI installation launches them at run time. The MoveDown method moves a package or transaction down in the ordered list, below the item that follows it.

## Syntax

MoveDown ( )

## Parameters

The MoveDown method does not take any parameters.

## Applies To

- [ISWiSuitePackage](#)

## MoveUp Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

If your project has more than one package or transaction, the Packages view lists them in the same order in which the *Advanced UI* or *Suite/Advanced UI* installation launches them at run time. The *MoveUp* method moves a package or transaction up in the ordered list, above the item that precedes it.

## Syntax

MoveUp ( )

## Parameters

The MoveUp method does not take any parameters.

## Applies To

- [ISWiSuitePackage](#)

## ISWiSuiteRelease Object (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

*Note that some edition- and project-specific differences are noted where applicable.*

The ISWiSuiteRelease object represents a release in the Releases view of InstallShield.

To add or remove releases, call ISWiProject.AddSuiteRelease or ISWiProject.DeleteSuiteRelease.

## Members

**Table 71** ▪ ISWiSuiteRelease Object Members

Name	Type	Description
<b>Build</b>	Method	Build a release. Note that to get any feedback about the build process, you must subscribe to events on the release. To learn more, see <a href="#">Using Build Status Events</a> .
<b>BuildLocation</b>	Read-Write String Property	Gets or sets the top-level directory where the release will be built.
<b>CachePackagesLocally</b>	Read-Write Boolean Property	<p>Gets or sets the Cache Packages Locally setting on the Setup.exe tab in the Releases view. This setting lets you specify whether you want to cache the Advanced UI or Suite/Advanced UI packages that are run on a target system in the location that is defined for each package in the Packages view. The default value is True.</p> <p>If you are building an uncompressed release, you may want to specify No for the value of this setting.</p>
<b>CertPassword</b>	Write-only String Property	<p>Sets the password for the .pfx file if the file has a password. InstallShield encrypts the password and stores it in your project file (.ism).</p> <p>At build time, InstallShield uses the password to sign files with a .pfx file. If your certificate is protected by a password but you do not enter it in this setting, signing with a .pfx file fails.</p>  <p><b>Note</b> ▪ This property is not applicable if the certificate that you are using for signing is in a certificate store. Note that if the certificate was imported into the store with password protection, you will be prompted to enter the password at build time.</p>
<b>DefaultLanguage</b>	Read-Write String Property	<p>Gets or sets the language identifier for the default language of a given release. This property value overrides the default project language that is configured in the General Information view or the String Editor view.</p> <p>For more information, see <a href="#">Setting the Default Project Language</a>.</p>

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>DigitalCertificateInfo</b>	Read-Write String Property	<p>Gets or sets the digital certificate that you want to use to sign your release.</p> <p>To specify a .pfx certificate on your machine, specify the path and file name.</p> <p>To reference a certificate store that contains the certificate, use a string in the following format:</p> <p>*Store*StoreLocation:Cert Subject</p> <p><b>Store</b> refers to the name of the certificate store that contains the certificate. Available options are:</p> <ul style="list-style-type: none"> <li>• My</li> <li>• Root</li> <li>• Trust</li> <li>• CA</li> </ul> <p><b>StoreLocation</b> refers to the location of the certificate store that contains the certificate. Available options are:</p> <ul style="list-style-type: none"> <li>• User</li> <li>• Machine</li> </ul> <p><b>Cert Subject</b> refers to the subject of the certificate.</p>
<b>DigitalURL</b>	Read-Write String Property	<p>Gets or sets the URL that is used in your digital certificate to link to a location that you would like end users to visit to learn more about your product, organization, or company. Use a fully qualified URL—for example, <b>http://www.mydomain.com</b>.</p>
<b>EnableLangSelectionDialog</b>	Read-Write Boolean Property	<p>Gets or sets the Languages Dialog setting on the Build tab in the Releases view. This setting lets you specify whether you want your installation to display the language selection wizard page when the installation is run with a full user interface.</p>

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>LauncherPrivileges</b>	Read-Write String Property	<p>Gets or sets the Required Execution Level setting on the Setup.exe tab in the Releases view. This setting is where you specify the minimum level that is required by your project's Setup.exe file for running on Windows Vista and later platforms. The available options are:</p> <ul style="list-style-type: none"> <li>● <b>erelAsAdmin (2)</b>—Setup.exe requires administrative privileges to run. Administrators must authorize it; non-administrators must authenticate as an administrator.</li> <li>● <b>erelAsHighestAvail (1)</b>—Setup.exe prefers administrative privileges. Administrators must authorize it; non-administrators run it without administrative privileges.</li> <li>● <b>erelAsInvoker (0)</b>—Setup.exe does not require administrative privileges, and all users can run it without administrative privileges. Setup.exe does not display any UAC messages prompting for credentials or for consent. This is the default option for Advanced UI and Suite/Advanced UI projects.</li> </ul> <p>InstallShield embeds an application manifest in the Setup.exe launcher. This manifest specifies the selected execution level. Operating systems earlier than Windows Vista ignore the required execution level.</p>
<b>Name</b>	Read-Write String Property	Gets or sets the internal name for the release.
<b>PackageLocation</b>	Read-Write Boolean Property	<p>Gets or sets the run-time location for the packages that are configured in the Packages view of the project. Available options are:</p> <ul style="list-style-type: none"> <li>● <b>eplSourceMedia (0)</b>—Copy from source media.</li> <li>● <b>eplSetupExe (1)</b>—Extract from Setup.exe.</li> <li>● <b>eplWeb (2)</b>—Download from the Web.</li> <li>● <b>eplIndividual (3)</b>— Follow individual selections.</li> </ul> <p>To learn more, see <a href="#">Specifying the Run-Time Location for Advanced UI or Suite/Advanced UI Packages at the Release Level</a>.</p>

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>Password</b>	Read-Write String Property	<p>Gets or sets the password for your installation. Passwords are case-sensitive.</p> <p>This property is used only if you the value of the PasswordProtect property is True.</p> <p>To learn more, see <a href="#">Password-Protecting an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>PasswordProtect</b>	Read-Write Boolean Property	<p>Gets or sets the Password Protect Launcher setting on the Setup.exe tab in the Releases view. This setting lets you indicate whether you want to password-protect your installation.</p> <p>To learn more, see <a href="#">Password-Protecting an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>PathVariableOverrides</b>	Read-Write String Property	<p>Gets or sets the value of a path variable in your project for the specified release. If this property is used to set the value of a path variable, it overrides any value that is set in the Path Variables view.</p> <p>Note that you can use this variable to get or override user-defined path variables, environment variables, and registry variables that are configured in the Path Variables view; however, you cannot override predefined path variables such as <i>&lt;WindowsFolder&gt;</i>.</p> <p>Following is sample Visual Basic code that overrides the value of a path variable called PathVar1:</p> <pre>pISWiSuiteRelease.PathVariableOverrides = "PathVar1=C:\Test1" + vbCrLf + "PathVar2=C:\test2"</pre>

**Table 71** ▪ ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>PostBuildEvent</b>	Read-Write String Property	 <b><i>Edition</i></b> ▪ This property is available in the Premier edition of InstallShield.  Gets or sets the command that is run after InstallShield has built and signed the release.  To specify more than one command, enter each command on a separate line in the string. At build time, InstallShield runs each command in the order that they are listed. The build waits until a command finishes before proceeding to the next one.  When you are entering a command, you can use any path variables and environment variables that are defined in your project, instead of using a hard-coded path. You can also use certain variables that are defined specifically for build event commands. To learn more, see <a href="#">Specifying Commands that Run Before, During, and After Builds</a> .
<b>PreBuildEvent</b>	Read-Write String Property	 <b><i>Edition</i></b> ▪ This property is available in the Premier edition of InstallShield.  Gets or sets the command that is run before InstallShield starts building the release. This event runs after InstallShield creates the release folder and log file, but before InstallShield starts building the release.  To specify more than one command, enter each command on a separate line in the string. At build time, InstallShield runs each command in the order that they are listed. The build waits until a command finishes before proceeding to the next one.  When you are entering a command, you can use any path variables and environment variables that are defined in your project, instead of using a hard-coded path. You can also use certain variables that are defined specifically for build event commands. To learn more, see <a href="#">Specifying Commands that Run Before, During, and After Builds</a> .

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>PreProcessorDefines</b>	Read-Write String Property	 <p><b>Project</b> • This information applies to Suite/Advanced UI projects.</p> <p>Gets or sets the preprocessor variable definitions. Preprocessor variable definitions that are specified here apply only to the current release; they are not used when compiling the script for other releases. Use the following format, with no spaces before or after equals signs or commas:</p> <p>MYVARIABLE1=123,MYVARIABLE2</p> <p>Such variables can be tested in the script by #if and #ifdef statements that control the flow of the script.</p> <p>Entering the name of a preprocessor variable for this setting defines the variable. For example if you enter <b>MYVARIABLE</b> for this setting, the script commands in the following #ifdef loop are executed:</p> <pre>#ifdef MYVARIABLE     // Commands #endif</pre> <p>After you add or change a preprocessor variable definition for this setting, you must compile your installation for the addition or change to take effect.</p>
<b>ProductNameOverride</b>	Read-Write String Property	<p>Gets or overrides the product name that was specified in the General Information view with a new value for the selected release. For information on how the product name is used, see <a href="#">Specifying a Product Name</a>.</p>

**Table 71** ▪ ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>ProductVersionOverride</b>	Read-Write String Property	<p>Gets or overrides the product version that was specified in the General Information view with a new value for the selected release. The version must contain only numbers. The version number is typically in the format <i>aaa.bbb.ccccc</i> or <i>aaa.bbb.ccccc.ddddd</i>, where <i>aaa</i> represents the major version number, <i>bbb</i> represents the minor version number, <i>cccc</i> represents the build number, and <i>ddddd</i> represents the revision number. The maximum value for the <i>aaa</i> and <i>bbb</i> portions is 255. The maximum value for <i>cccc</i> and <i>ddddd</i> is 65,535.</p> <p>Note that although you can include the fourth field (<i>ddddd</i>), the installation does not use this part of the product version to distinguish between different product versions. To learn more, see <a href="#">Specifying the Product Version</a>.</p> <p>The product version that you specify is displayed on the Properties dialog box for Setup.exe. For more information, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>ReleaseFlags</b>	Read-Write String Property	<p>Gets or sets a string that contains the release flags that you want to use to filter your features. Separate multiple flags with a comma.</p> <p>Release flags enable you to customize your installation by including or excluding certain items in each release.</p> <p>Once you have assigned release flags to features and packages in the Advanced UI or Suite/Advanced UI project, you can create a release that includes features and packages based on those flags. By default, all features and packages are included in a release. Once you specify a flag for the ReleaseFlags property (or for the Release Flags setting on the Build tab in the Releases view), only unflagged items and items that contain the specified release flag are included in your installation.</p> <div>  <p><b>Note</b> ▪ If a release does not have release flags, it will include all applicable items that have release flags. To include only unflagged items, specify a flag that does not exist. For example, you might use <b>NoFlags</b>. This way, only unflagged items are built into a release.</p> </div>

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>SetupExeCompany</b>	Read-Write String Property	<p>Gets or sets the value to override the default company name for Setup.exe. Note that you must also select a value of True for the UseMyVersionInfo property.</p> <p>The company name is displayed on the Properties dialog box for the setup launcher; this Properties dialog box opens when end users right-click the Setup.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>SetupExeCopyright</b>	Read-Write String Property	<p>Gets or sets a custom copyright notice for Setup.exe. Note that you must also select a value of True for the UseMyVersionInfo property.</p> <p>The copyright is displayed on the Properties dialog box for the setup launcher; this Properties dialog box opens when end users right-click the Setup.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>SetupExeDescription</b>	Read-Write String Property	<p>Gets or sets a custom file description for Setup.exe. Note that you must also select a value of True for the UseMyVersionInfo property.</p> <p>The description is displayed on the Properties dialog box for the setup launcher; this Properties dialog box opens when end users right-click the Setup.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>SetupExeVersion</b>	Read-Write String Property	<p>Gets or sets the value to override the default product version and file version for Setup.exe with your own version number. Note that you must also select a value of True for the UseMyVersionInfo property.</p> <p>The product version and file version are displayed on the Properties dialog box for the setup launcher; this Properties dialog box opens when end users right-click the Setup.exe file and then click Properties.</p> <p>Note that the file version always contains four fields. If you specify fewer than four fields for your product version, the remaining fields are filled with zeros. For example, if you specify a product version of <b>1.1</b>, the file version that is used in the version resources of Setup.exe is <b>1.1.0.0</b>.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>SetupFileName</b>	Read-Write String Property	Gets or sets the file name—without the .exe file extension—that InstallShield should use for the setup launcher file that it generates at build time. If this setting is blank, InstallShield uses the default value of <i>Setup</i> , and the setup launcher file is called Setup.exe.
<b>Build64bitSetupExe</b>	Read-Write String Property	Gets or sets the value of the 64-Bit Setup Launcher setting for the current suite release. The possible values are: <ul style="list-style-type: none"> <li>● TRUE - to 64-bit Setup Launcher.</li> <li>● FALSE - to 32-bit Setup Launcher.</li> </ul>
<b>SetupIcon</b>	Read-Write String Property	<p>Gets or sets the release's Setup.exe Icon File setting, which specifies the fully qualified name of the file from which the executable file's icon is taken at build time. If the property's value is null, a default icon is used.</p> <p>By default, the icon with index 0 is used; to specify a different icon, add a comma (,) as well as the icon's index or resource ID (preceded by a minus sign) after the file name. For example, <b>C:\Temp\MyLibrary.dll,2</b> indicates the icon with an index of 2, and <b>C:\Temp\MyLibrary.dll,-100</b> indicates the icon with a resource ID of 100.</p> <p>Instead of hard-coding a path, you can use a path variable that is defined in the Path Variables view or part of the ISWiPathVariables collection. At build time, InstallShield replaces the path variable with the appropriate value.</p>
<b>SignatureDescription</b>	Read-Write String Property	<p>Gets or sets the signature description for the Setup.exe file. The description that you specify is displayed on the User Account Control (UAC) box to the right of the "Program Name:" label. The UAC dialog box opens when an end user launches the signed file and elevated privileges are required.</p> <p>If you leave this setting blank, InstallShield uses the name of the file without its extension as the description to the right of the "Program Name:" label on the UAC dialog box.</p>
<b>SignEnabled</b>	Read-Write Boolean Property	Gets or sets the Sign Setup.exe setting on the Signing tab in the Releases view. This setting lets you indicate whether you want to sign the Advanced UI or Suite/Advanced UI installation.
<b>SuiteGuidOverride</b>	Read-Write String Property	Gets or overrides the GUID that uniquely identifies the Advanced UI or Suite/Advanced UI installation.

**Table 71** ■ ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>UILanguages</b>	Read-Write String Property	<p>Gets or sets a comma-delimited string of decimal language identifiers of the user interface languages that are includes in a release.</p> <p>Note that if a language is not selected in the Setup Languages setting in the General Information view of the project, it is not a valid language for the UILanguages property.</p>
<b>UpdateUrl</b>	Read-Write String Property	<p>If you may want to make updates for your Advanced UI or Suite/Advanced UI setup launcher available for download when they are available, use this property to specify the absolute path, including the file name, for an updated Advanced UI or Suite/Advanced UI setup launcher. This support makes it possible for end users to easily obtain a newer version of your product before installing an earlier version.</p> <p>For more information about updates for your Advanced UI or Suite/Advanced UI installation, including requirements for the update, see <a href="#">Supporting Downloadable Updates for an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>UseMyVersionInfos</b>	Read-Write Boolean Property	<p>Gets or sets the Use Custom Version Properties setting on the Setup.exe tab in the Releases view. This setting lets you specify whether you want to override the default copyright notice and file description for Setup.exe with your own copyright notice and file description. If you specify a value of True, enter your own custom values for the SetupExeCopyright and SetupExeDescription properties.</p> <p>The copyright and description are displayed on the Properties dialog box for the setup launcher; this Properties dialog box opens when end users right-click the Setup.exe file and then click Properties.</p> <p>To learn more, see <a href="#">Customizing File Properties for the Setup Launcher</a>.</p>
<b>UsePathVariableTestValues</b>	Read-Write Boolean Property	<p>If you used test values for any of your path variables, set this property to True to set those variables to their actual values at this time.</p>

**Table 71** ▪ ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>VMConfig</b>	Read-Write String Property	 <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p>
		 <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Gets or sets the name of the group of VM configuration settings that you want to use when distributing the selected release to a VM.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>
<b>VMMachinePassword</b>	Read-Write String Property	 <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p>
		 <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>If a password is specified for the VM configuration that is selected through the VMConfig property, that password is considered to be the default value for the VMMachinePassword property. To override the password for the selected release, set the VMMachinePassword property.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

**Table 71** • ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>VMMachineUserName</b>	Read-Write String Property	 <b>Project</b> ▪ This is available in Suite/Advanced UI projects.  <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield. <p>If a user name is specified for the VM configuration that is selected through the VMConfig property, that user name is considered to be the default value for the VMMachineUserName property. To override the user name for the selected release, set the VMMachineUserName property.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>
<b>VMSnapShot</b>	Read-Write String Property	 <b>Project</b> ▪ This is available in Suite/Advanced UI projects.  <b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield. <p>Optionally gets or sets the name of the snapshot that you want to use for distributing the release.</p> <p>If a snapshot is specified for the VM configuration that is selected through the VMConfig property, the name of that snapshot is considered to be the default value for the VMSnapShot property.</p> <p>If no snapshot is specified for the VM configuration, InstallShield does not revert to a specific snapshot. InstallShield powers on the VM without reverting it to a specific snapshot, and copies your installation to the VM.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

**Table 71** ▪ ISWiSuiteRelease Object Members (cont.)

Name	Type	Description
<b>VMStageMachineCopyPath</b>	Read-Write String Property	 <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p>
		 <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>The copy path identifies the location on the VM where the release is to be distributed. The last subfolder in the path can be a path that InstallShield creates on the VM; the other folders in the path must already exist.</p> <p>If a destination path is specified for the VM configuration that is selected through the VMConfig property, that destination path is considered to be the default value for the VMStageMachineCopyPath property. To override the destination path for the selected release, set the VMStageMachineCopyPath property.</p> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>
<b>VMStagePostBuild</b>	Read-Write Boolean Property	 <p><b>Project</b> ▪ This is available in Suite/Advanced UI projects.</p>
		 <p><b>Edition</b> ▪ The Suite/Advanced UI project type is available in the Premier edition of InstallShield.</p> <p>Specify whether you want InstallShield to automatically distribute the selected release each time that it is successfully built. Distributing the release to the VM involves the following tasks:</p> <ol style="list-style-type: none"> <li>1. Revert the VM to the designated snapshot (if one is specified).</li> <li>2. Power on the VM.</li> <li>3. Copy the built release to the VM to make it available for testing.</li> </ol> <p>To learn more about VM distribution, see <a href="#">Distributing Releases to a Virtual Machine that InstallShield Provisions at Build Time or on Demand</a>.</p>

## Applies To

- [ISWiProject](#)

## Build Method (Advanced UI and Suite/Advanced UI)

---

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

---

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition of InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

To build a release in an *Advanced UI* or *Suite/Advanced UI* project, call the *Build* method.

## Syntax

*Build* ()

## Build Status Events

The *ISWiSuiteRelease* object uses the following build status events:

- *StatusMessage* (string *Message*, ref bool *Cancel*)
- *ProgressMax* (int *Max*, ref bool *Cancel*)
- *ProgressIncrement* (int *Increment*, ref bool *Cancel*)
- *TextCancel* (ref bool *Cancel*)
- *GetDotNetLibrary* (out object ???)
- *WarningMessage* (string *Message*)
- *ErrorMessage* (string *Message*)
- *IsCancelledByUserAnError* (ref bool *IsError*)
- *StatusMessageEx* (string *Message*, object *Tag*, ref bool *Cancel*)

These events occur during the build process; they provide status updates. You can set *pbCancel* to stop the build.

# Automation Collections for Advanced UI and Suite/Advanced UI Projects

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

Each Advanced UI or Suite/Advanced UI automation collection is a set of objects. For example, the ISWiSuiteFeatures collection is a set of ISWiSuiteFeature objects in the current project. This section describes each of the Advanced UI or Suite/Advanced UI automation collections.

## ISWiLanguages Collection

---

**Edition** ▪ Support for multilanguage installations is available with InstallShield Premier Edition.

---

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

---

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiLanguages collection contains all of the languages in the current language.

## Members

**Table 72** ▪ ISWiLanguages Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of string entries in the ISWiLanguages collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the language to retrieve the ISWiLanguage object.

## Applies To

- ISWiProject

## ISWiPathVariables Collection

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The ISWiPathVariables collection contains all of the Advanced UI or Suite/Advanced UI properties in the current project.

## Members

**Table 73** ▪ ISWiPathVariables Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of path variables in the ISWiPathVariables collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the path variable to retrieve the ISWiPathVariable object.

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteDFLFilters is a collection that contains all of the filters that are associated with a dynamic link for the additional files that a package in an Advanced UI or Suite/Advanced UI project requires.

### Members

**Table 80** ▪ ISWiSuiteDFLFilters Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteDFLFilters collection.
Item	Read-Only Property	Provide the index number or name of the dynamic file link to retrieve the ISWiSuiteDFLFilter object.

### Applies To

- ISWiSuitePackage

## ISWiSuiteDynamicFileLinks Collection

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteDynamicFileLinks is a collection that contains every dynamic file link in a folder in a package of an Advanced UI or Suite/Advanced UI project.

## Members

**Table 81** ▪ ISWiSuiteDynamicFileLinks Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteDynamicFileLinks collection.
Item	Read-Only Property	Provide the index number or name of the dynamic file link to retrieve the ISWiSuiteDynamicFileLink object.

## Applies To

- ISWiSuiteFolder

## ISWiSuiteEvents Collection

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteEvents is a collection that contains the events for your project or the events that are associated with a package in your project.

## Members

**Table 82** ▪ ISWiSuiteEvents Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteEvents collection.
Item	Read-Only Property	Provide the index number of the event to retrieve the ISWiSuiteEvent object.

## Applies To

- ISWiProject

- [ISWiSuitePackage](#)

## ISWiSuiteExitConditions Collection

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteExitConditions is a collection that contains all of the exit conditions in your project.

### Members

**Table 83** ▪ ISWiSuiteExitConditions Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteExitConditions collection.
<b>Item</b>	Read-Only Property	Provide the index number of the exit condition to retrieve the ISWiSuiteExitCondition object.

### Applies To

- [ISWiProject](#)

## ISWiSuiteFeatures Collection

**Project** ▪ This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** ▪ The *Advanced UI* project type is available in the *InstallShield*. The *Suite/Advanced UI* project type is available in the *Premier edition* of *InstallShield*. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteFeatures is a collection that contains every feature (as an ISWiSuiteFeature object) in your project.

When ISWiSuiteFeatures is a member of ISWiProject, it contains all of the root-level features in the project. To retrieve a collection of subfeatures, access the Features property of the ISWiSuiteFeature object. The result is an ISWiSuiteFeatures collection that contains the immediate subfeatures of the current root-level feature. Repeat for further levels of subfeatures.

## Members

**Table 84** • ISWiSuiteFeatures Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteFeatures collection.
Item	Read-Only Property	<p>Provide the index number or name of the feature to retrieve the ISWiSuiteFeature object. For example, the following statements create a copy of the first item in the collection and of the feature named Help_Files:</p> <pre>Set pFeat1 = m_ISWiProject.ISWiSuiteFeatures.Item(1)  Set pFeat2 = m_ISWiProject.ISWiSuiteFeatures.Item("Help_Files")</pre> <p>The name of the feature is case-sensitive—for example, “Help_Files” and “Help_files” are two different features.</p> <p>Item is the default property for ISWiSuiteFeatures, which means that the following two lines of code are equivalent:</p> <pre>m_ISWiProject.ISWiSuiteFeatures.Item("Help_Files") m_ISWiProject.ISWiSuiteFeatures("Help_Files").</pre>

## Applies To

- ISWiProject

## ISWiSuiteFiles Collection

**Project** • This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteFiles is a collection that contains all of the files in a folder of a package in an Advanced UI or Suite/Advanced UI project.

## Members

**Table 85** ▪ ISWiSuiteFiles Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteFiles collection.
Item	Read-Only Property	Provide the index number or name of the file to retrieve the ISWiSuiteFile object.

## Applies To

- ISWiSuiteFolder

# ISWiSuiteFolders Collection

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteFolders is a collection that contains all of the subfolders in a folder of a package in an Advanced UI or Suite/Advanced UI project.

## Members

**Table 86** • ISWiSuiteFolders Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteFolders collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the subfolder to retrieve the ISWiSuiteFolder object.

## Applies To

- [ISWiSuiteFolder](#)

## ISWiSuitePackages Collection

**Project** • This information applies to the following project types:

- *Advanced UI*
- *Suite/Advanced UI*

**Edition** • The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuitePackages is a collection that contains every package (as an ISWiSuitePackage object) in a Windows Installer transaction in your project.

## Members

**Table 87** • ISWiSuitePackages Collection Members

Name	Type	Description
<b>Count</b>	Read-Only Property	Use this property to return the total number of elements in the ISWiSuitePackages collection.
<b>Item</b>	Read-Only Property	Provide the index number or name of the transaction to retrieve the ISWiSuitePackage object.

## Applies To

- [ISWiProject](#)

# ISWiSuiteReleases Collection

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

ISWiSuiteReleases is a collection that contains all of the releases in your Advanced UI or Suite/Advanced UI project.

## Members

**Table 88** ▪ ISWiSuiteReleases Collection Members

Name	Type	Description
Count	Read-Only Property	Use this property to return the total number of elements in the ISWiSuiteReleases collection.
Item	Read-Only Property	Provide the index number or name of the release to retrieve the ISWiSuiteRelease object.

# Object Reference for Expressions in Advanced UI and Suite/Advanced UI Projects

**Project** ▪ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ▪ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

In various settings of Advanced UI and Suite/Advanced UI projects, you can embed object expressions to query target systems for information about a file, a registry entry, or other items. Object expressions use this convention:

```
[@Object(Parameters, ...).Property(Parameters, ...)]
```

Each object expression contains a reference to an object, which is a collection of object-specific properties. Objects and properties may contain parameters.

This section of the documentation explains each of the objects that are available for use in object expressions.

**Table 1** ▪ Objects That Are Available for Object Expressions

Object	Description
<b>Feature Object</b>	Check target systems for information about a feature in an Advanced UI or Suite/Advanced UI installation.
<b>File Object</b>	Check target systems for information about a file during an Advanced UI or Suite/Advanced UI installation.
<b>Parcel Object</b>	Check target systems for information about a package in an Advanced UI or Suite/Advanced UI installation.
<b>Platform Object</b>	Check target systems for operating system details during an Advanced UI or Suite/Advanced UI installation.
<b>Registry Object</b>	Check the registry on target systems during an Advanced UI or Suite/Advanced UI installation.

## Feature Object

To create an object expression that checks target systems for information about a feature in an Advanced UI or Suite/Advanced UI installation, use the Feature object. The Feature object has support for properties such as DisplayName, ActionState, and InstalledState.

## Syntax

```
[@Feature(FeatureName).ActionState]
```

```
[@Feature(FeatureName).AllowSelectionChange]
```

```
[@Feature(FeatureName).Cost]
```

```
[@Feature(FeatureName).Description]
```

```
[@Feature(FeatureName).DisplayName]
```

```
[@Feature(FeatureName).InstalledState]
```

```
[@Feature(FeatureName).Visible]
```

## Parameters

One parameter is available for the Feature object.

**Table 2** ■ Parameters for the Feature Object

Parameter	Description
<b>FeatureName</b>	Specify the name of the feature.

## Properties

The following properties are available for the Feature object.

**Table 3** ■ Properties for the Feature Object

Property	Description
<b>ActionState</b>	Retrieves the currently set action state of the feature. Valid values are: <ul style="list-style-type: none"> <li>● <b>0</b>—No action will be taken for the feature.</li> <li>● <b>1</b>—The feature will be installed.</li> <li>● <b>2</b>—The feature will be removed.</li> </ul>
<b>AllowSelectionChange</b>	Retrieves a Boolean value that indicates whether end users should be allowed to select or deselect the feature on the InstallationFeatures wizard page. Valid values are: <ul style="list-style-type: none"> <li>● <b>true</b>—End users should be able to select or deselect the feature through the wizard interface. This is the default option.</li> <li>● <b>false</b>—End users should not be able to select or deselect the feature through the wizard interface. If this feature is visible on the InstallationFeatures wizard page, it appears in a read-only state (either selected or deselected, based on other factors, such as the feature's condition).</li> </ul>
<b>Cost</b>	Retrieves how much space (in bytes) the feature requires on the target system if this value was specified in the Features view.

**Table 3** • Properties for the Feature Object (cont.)

Property	Description
<b>Description</b>	Retrieves the localized description of the feature.
<b>DisplayName</b>	Retrieves the localized display name of the feature.
<b>InstalledState</b>	Retrieves the installed state of the feature as determined by the package detection states of the packages in the feature. Valid values are: <ul style="list-style-type: none"> <li>● <b>0</b>—The feature is not currently installed.</li> <li>● <b>3</b>—The feature is installed.</li> </ul>
<b>Visible</b>	Retrieves a Boolean value that indicates whether the feature should be visible on the InstallationFeatures wizard page during installation.

## Examples

The following examples demonstrate use of the Feature object in object expressions.

**Table 4** • Sample Feature Object Expressions

Expression	Description
<b>[@Feature(FeatureABC).ActionState]</b>	Determine whether the Advanced UI or Suite/Advanced UI is installing the FeatureABC feature.
<b>[@Feature(FeatureABC).Cost]</b>	Determine how much space (in bytes) the feature requires.

# File Object

To create an object expression that checks target systems for information about a file during an Advanced UI or Suite/Advanced UI installation, use the File object. The File object has support for properties such as Date and Version.

## Syntax

```
[@File(FilePath,64Bit).Content]
```

```
[@File(FilePath,64Bit).Date(Parameter)]
```

```
[@File(FilePath,64Bit).Version]
```

## Parameters

The following parameters are available for the File object.

**Table 5** • Parameters for the File Object

Parameter	Description
<b>FilePath</b>	Specify the path to the file. You can use property directory identifiers such as [ProgramFilesFolder].
<b>64Bit</b>	<p>Use this optional Boolean parameter to indicate whether the file is in a 64-bit location, such as in the System32 folder on a 64-bit system. Valid options are:</p> <ul style="list-style-type: none"> <li>● <b>true</b>—Check the 64-bit location.</li> <li>● <b>false</b>—Check the 32-bit location.</li> </ul> <p>If you omit this property, or if the target system is running a 32-version of Windows, the installation checks the 32-bit location.</p>

## Properties

The following properties are available for the File object.

**Table 6** • Properties for the File Object

Property	Description
<b>Content</b>	If the file is a text file (for example, .txt, .htm, .xml, .config, .ini, or .sql), retrieves the contents of the file.
<b>Date</b>	<p>Retrieves the date and time for the file. Optional parameters that are available for this property are:</p> <ul style="list-style-type: none"> <li>● <b>modified</b>—Retrieves the date and time at which the file was last modified. This is the default parameter.</li> <li>● <b>access</b>—Retrieves the date and time at which the file was last accessed.</li> <li>● <b>create</b>—Retrieves the date and time at which the file was created.</li> </ul> <p>If you omit a parameter for the Date property, the File object returns the last-modified date.</p>
<b>Version</b>	Retrieves the version of the file. For an unversioned file, this property returns empty.

## Examples

The following examples demonstrate use of the File object in object expressions

**Table 7** • Sample File Object Expressions

Expression	Description
<b><code>[@File([ProgramFilesFolder]MyCompany\MyProduct.exe,false).Date(modified)]</code></b>	Obtain the last modified date and time for a file called MyProduct.exe.  On 32-bit target systems, the path may be this: C:\Program Files\MyCompany\MyProduct.exe  On 64-bit target systems, the path may be this: C:\Program Files (x86)\MyCompany\MyProduct.exe
<b><code>[@File([SystemFolder]notepad.exe).Version]</code></b>	Obtain the version number of notepad.exe in the System32 folder on 32-bit target systems or in the SysWOW64 folder on 64-bit target systems.
<b><code>[@File([SystemFolder]notepad.exe,true).Version]</code></b>	Obtain the version number of notepad.exe in the System32 folder on 32-bit and 64-bit target systems.

## Parcel Object

To create an object expression that checks target systems for information about a package in an Advanced UI or Suite/Advanced UI installation, use the Parcel object. The Parcel object has support for properties such as Eligible, ActionState, and DetectedState.

### Syntax

`[@Parcel(PackageGUID).ActionState]`

`[@Parcel(PackageGUID).DetectedState]`

`[@Parcel(PackageGUID).Eligible]`

`[@Parcel(PackageGUID).ExitCode]`

`[@Parcel(PackageGUID).Type]`

### Parameters

One parameter is available for the Parcel object.

**Table 8** • Parameters for the Parcel Object

Parameter	Description
<b>PackageGUID</b>	Specify the GUID of the package.

## Properties

The following properties are available for the Parcel object.

**Table 9** • Properties for the Parcel Object

Property	Description
<b>ActionState</b>	Retrieves the currently set action state of the package. This value may change, depending on when at run time the property is queried. Valid values are: <ul style="list-style-type: none"> <li>● <b>1</b>—The package will run its install operation.</li> <li>● <b>2</b>—The package will run its modify operation.</li> <li>● <b>3</b>—The package will run its repair operation.</li> <li>● <b>4</b>—The package will run its remove operation.</li> <li>● <b>5</b>—No action will be performed for the package.</li> </ul>
<b>DetectedState</b>	Retrieves the installed state of the package. Valid values are: <ul style="list-style-type: none"> <li>● <b>0</b>—The package is not installed.</li> <li>● <b>1</b>—The package is currently installed.</li> </ul>
<b>Eligible</b>	Retrieves a Boolean value that indicates whether the target system meets the requirements that are necessary for the package to be run.
<b>ExitCode</b>	Retrieves the exit code for the package once its scheduled operation has completed. The value of this property is indeterminate before package operations are run.
<b>Name</b>	Retrieves the display name of the package.
<b>Type</b>	Retrieves the type of package. Valid values are: <ul style="list-style-type: none"> <li>● <b>0</b>—Executable package (.exe)</li> <li>● <b>1</b>—Windows Installer package (.msi)</li> <li>● <b>2</b>—Patch package (.msp)</li> <li>● <b>3</b>—InstallScript package (.hdr)</li> <li>● <b>5</b>—Sideloaded Windows App package (.appx)</li> <li>● <b>6</b>—Web Deploy package (.zip)</li> </ul>

## Examples

The following examples demonstrate use of the Parcel object in object expressions.

**Table 10** ▪ Sample Parcel Object Expressions

Expression	Description
<code>[@Parcel(0F283EC0-E9D1-4D18-801D-0014F6CA96DF).DetectedState]</code>	Determine whether the referenced package is installed.
<code>[@Parcel(0F283EC0-E9D1-4D18-801D-0014F6CA96DF).ExitCode]</code>	Obtain the exit code for the package once its scheduled operation has completed.

## Platform Object

To create an object expression that checks target systems for operating system details during an Advanced UI or Suite/Advanced UI installation, use the Platform object. The Platform object has support for properties such as Architecture, FullVersion, and MajorVersion.

### Syntax

`[@Platform.Architecture]`

`[@Platform.BuildNumber]`

`[@Platform.CSDVersion]`

`[@Platform.FullVersion]`

`[@Platform.MajorVersion]`

`[@Platform.MinorVersion]`

`[@Platform.ProductType]`

`[@Platform.ServicePackVersion]`

`[@Platform.Value]`

### Parameters

The Platform object does not have any parameters.

### Properties

The following properties are available for the Platform object.

**Table 11** ▪ Properties for the Parcel Object

Property	Description
<b>Architecture</b>	Retrieves the architecture (x86, x64, IA64, ARM, or Unknown) of the machine on which the Advanced UI or Suite/Advanced UI installation is running.

**Table 11** • Properties for the Parcel Object (cont.)

Property	Description
<b>BuildNumber</b>	Retrieves the build number version of Windows on the machine on which the Advanced UI or Suite/Advanced UI installation is running.  For a list of valid build numbers, see the dwBuildNumber member of the OSVERSIONINFOEX structure that is documented in the MSDN Library.
<b>CSDVersion</b>	Retrieves the CSD version of Windows on the machine on which the Advanced UI or Suite/Advanced UI installation is running. Service Pack 2 is an example of a CSD version.
<b>FullVersion</b>	Retrieves the full version number of Windows on the machine on which the Advanced UI or Suite/Advanced UI installation is running. The value is calculated as MajorVersion X 100 + MinorVersion.  For example, the version number of Windows 8.1 is 6.3. The FullVersion value on a machine with Windows 8.1 is 603.
<b>MajorVersion</b>	Retrieves the major version number of Windows on the machine on which the Advanced UI or Suite/Advanced UI installation is running.
<b>MinorVersion</b>	Retrieves the minor version number of Windows on the machine on which the Advanced UI or Suite/Advanced UI installation is running.
<b>ProductType</b>	Retrieves the product type of the machine on which the Advanced UI or Suite/Advanced UI installation is running. Valid values are: <ul style="list-style-type: none"> <li>• <b>1</b>—Workstation</li> <li>• <b>2</b>—Domain controller</li> <li>• <b>3</b>—Server</li> </ul>
<b>ServicePackVersion</b>	Retrieves the service pack version of Windows on the machine on which the Advanced UI or Suite/Advanced UI installation is running.
<b>Value</b>	Retrieves the same value as the FullVersion property.

## Examples

The following examples demonstrate use of the Platform object in object expressions.

**Table 12** • Sample Platform Object Expressions

Expression	Description
<b>[@Platform.FullVersion]</b>	Obtain the version number of the target system.
<b>[@Platform.Architecture]</b>	Obtain the architecture of the target system.

# Registry Object

To create an object expression that checks the registry on target systems during an Advanced UI or Suite/Advanced UI installation, use the Registry object.

## Syntax

```
[@Registry(RegistryKeyPath, 64Bit).KeyValue(DataValueName)]
```

```
[@Registry(RegistryKeyPath, 64Bit).Value]
```

## Parameters

The following parameters are available for the Registry object.

**Table 13** ▪ Parameters for the Registry Object

Parameter	Description
<b>RegistryKeyPath</b>	Specify the full path of the registry key that you want to check on target systems. Use the following abbreviations for the root: <ul style="list-style-type: none"> <li>• HKCR</li> <li>• HKCU</li> <li>• HKLM</li> </ul>
<b>64Bit</b>	Use this optional Boolean parameter to indicate whether to check the 64-bit view of the registry. Valid options are: <ul style="list-style-type: none"> <li>• <b>true</b>—Check the 64-bit view of the registry.</li> <li>• <b>false</b>—Check the 32-bit view of the registry.</li> </ul> If you omit this property, or if the target system is running a 32-version of Windows, the installation checks the 32-bit view of the registry.

## Properties

The following properties are available for the Registry object.

**Table 14** ▪ Properties for the Registry Object

Property	Description
<b>KeyValue</b>	Retrieve the value data of the value that is passed as a parameter for the KeyValue property.
<b>Value</b>	Retrieve the value data of the registry key's default value.

## Examples

The following examples demonstrate use of the Registry object in object expressions.

**Table 15** ▪ Sample Registry Object Expressions

Expression	Description
<b>[@Registry(HKLM\Software\Microsoft\Windows NT\CurrentVersion, false).KeyValue(RegisteredOwner)]</b>	<p>On 32-bit target systems, obtain the value data of the RegisteredOwner value for the following registry key:</p> <p>HKLM\Software\Microsoft\Windows NT\CurrentVersion</p> <p>On 64-bit target systems, obtain the value data of the RegisteredOwner value for the following registry key:</p> <p>HKLM\Software\Wow6432Node\Microsoft\Windows NT\CurrentVersion</p>
<b>[@Registry(HKLM\Software\[COMPANY]\[PRODUCT], true).Value]</b>	<p>On 32-bit and 64-bit target systems, obtain the value data of the default value for the following registry key:</p> <p>HKLM\Software\My Company Name\My Product Name</p>
<b>[@Registry(HKCR\Software\My Company Name\My Product Name, false).KeyValue(MyFile[\[1[\]].exe)]</b>	<p>On 32-bit target systems, obtain the value data of the MyFile[1].exe value for the following registry key:</p> <p>HKCU\Software\My Company Name\My Product Name</p> <p>On 64-bit target systems, obtain the value data of the MyFile[1].exe value for the following registry key:</p> <p>HKLM\Software\Wow6432Node\My Company Name\My Product Name</p> <p>To avoid treating the square brackets in the data value name as parameter parse indicators, the square brackets are escaped as shown in the sample expression.</p>

# InstallShield Custom Action Reference

This section describes each of the built-in InstallShield custom actions that are added automatically to InstallShield projects to support different functionality.

**Windows Logo** - If you are applying for the Windows logo, the intended behavior of each custom action in your installation must be documented. This does not apply to custom action types 19 (displays an error, returns failure, and ends the installation), 35 (sets the installation directory), or 51 (sets a property). **ISICE10** validates that each custom action is documented.

## **\_serial\_verifyCA\_isx**

Decreases the value of the property SERIALNUMVALRETRYLIMIT by 1.

## **\_serial\_verifyCA\_isx\_helper**

Decreases the value of the property SERIALNUMVALRETRYLIMIT by 1.

## **CheckForProductUpdates**

Uses FlexNet Connect to check for product updates.

This custom action launches an executable file called `Agent.exe`, and it passes the following:

```
/au[ProductCode] /EndOfInstall
```

## **CheckForProductUpdatesOnReboot**

Uses FlexNet Connect to check for product updates on reboot.

This custom action launches an executable file called `Agent.exe`, and it passes the following:

```
/au[ProductCode] /EndOfInstall /Reboot
```

## **DLLWrapCleanup**

Standard DLL wrapper that cleans extracted data.

This is a Windows Installer DLL custom action. The name of the DLL file is `dllwrap.dll`, and its entry point is `DLLWrapCleanup`.

## **DLLWrapStartup**

Standard DLL wrapper that extracts data that describes calls.

This is a DLL custom action. The name of the DLL file is `dllwrap.dll`, and its entry point is `DLLWrapStartup`.

## **ISChainPackageCommit**

Removes extracted files from a multi-package transaction.

## ISChainPackagePrepare

Prepares and extracts files for a multi-package transaction.

## ISChainPackageRollback

Removes extracted files from a multi-package transaction.

## ISComponentServiceCosting

Extracts information from the ISComPlusApplication table and saves it in a temporary file for COM+ applications.

This is a Windows Installer DLL custom action. The name of the DLL file is `iscomsrv.dll`, and its entry point is `ISComponentServiceCosting`.

## ISComponentServiceFinalize

Commits COM+ applications during installation and uninstallation.

This is a Windows Installer DLL custom action. The name of the DLL file is `iscomsrv.dll`, and its entry point is `ISComponentServiceFinalize`.

## ISComponentServiceInstall

Installs COM+ applications during an installation.

This is a DLL custom action. The name of the DLL file is `iscomsrv.dll`, and its entry point is `ISComponentServiceInstall`.

## ISComponentServiceRollback

Rolls back COM+ applications during a failed installation or uninstallation.

This is a DLL custom action. The name of the DLL file is `iscomsrv.dll`, and its entry point is `ISComponentServiceRollback`.

## ISComponentServiceUninstall

Removes COM+ applications during uninstallation.

This is a DLL custom action. The name of the DLL file is `iscomsrv.dll`, and its entry point is `ISComponentServiceUninstall`.

## ISIISCleanup

Removes temporary files and registry entries for an IIS installation.

This is a DLL custom action. The name of the DLL file is `IISHelper.dll`, and its entry point is `ISIISCleanup`.

## ISIISCosting

Creates a list of actions in a temporary file for an IIS installation. Sets the `CustomActionData` property for other IIS actions.

This is a DLL custom action. The name of the DLL file is `IISHelper.dll`, and its entry point is `ISIISCosting`.

## ISIIInstall

Creates Web sites, applications, virtual directories, and other items for an IIS installation.

This is a DLL custom action. The name of the DLL file is `IISHelper.dll`, and its entry point is `ISIIInstall`.

## ISIISRollback

Removes Web sites, applications, virtual directories, and other items during rollback for IIS.

This is a DLL custom action. The name of the DLL file is `IISHelper.dll` and its entry point is `ISIISRollback`.

## ISIISUninstall

Removes Web sites, applications, virtual directories, and other items during uninstallation for IIS.

This is a DLL custom action. The name of the DLL file is `IISHelper.dll`, and its entry point is `ISIISUninstall`.

## ISInstallPrerequisites

Launches the installation of prerequisites that are associated with features.

This is a DLL custom action. The name of the DLL file is `PrqLaunch.dll`, and its entry point is `InstallPrerequisites`.

## ISJITCompileActionAtInstall

Precompiles .NET assemblies at installation time.

This custom action launches a Microsoft executable file called `ngen.exe`.

## ISJITCompileActionAtUnInstall

Deletes a precompiled .NET assemblies at uninstallation time.

This custom action launches a Microsoft executable file called `ngen.exe`.

## ISLockPermissionsCost

Sets the `CustomActionData` property for the `ISLockPermissionsInstall` action.

This is a DLL custom action. The name of the DLL file is `ISLockPermissions.dll`, and its entry point is `ISLockPermissionsCostAction`.

## ISLockPermissionsInstall

Sets permissions when the product is installed.

This is a DLL custom action. The name of the DLL file is `ISLockPermissions.dll`, and its entry point is `ISLockPermissionsInstallAction`.

## ISNetApiInstall

Creates users and groups from an .ini file.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetAPI.dll`, and its entry point is `ISNetApiInstall`.

## ISNetApiRollback

Rolls back changes for users and groups.

This is a DLL custom action. The name of the DLL file is ISNetAPI.dll, and its entry point is ISNetApiRollback.

## ISNetCreateIniForOneUser

Extracts operations to a temporary file for users and groups.

This is a DLL custom action called ISNetAPI.dll.

## ISNetDeleteIniFile

Cleans up temporary files for users and groups.

This is a DLL custom action called ISNetAPI.dll.

## ISNetGetGroups

Puts groups into a combo box.

This is a Windows Installer DLL custom action. The name of the DLL file is ISNetAPI.dll, and its entry point is ISNetGetGroups.

## ISNetGetServers

Puts a list of servers into a combo box.

This is a Windows Installer DLL custom action. The name of the DLL file is ISNetAPI.dll, and its entry point is ISNetGetServers.

## ISNetGetUsers

Puts a list of users into a combo box.

This is a Windows Installer DLL custom action. The name of the DLL file is ISNetAPI.dll, and its entry point is ISNetGetUsers.

## ISNetSetLogonName

Stores the user, group, and server properties that were entered in the LogonInformation dialogs.

This is a Windows Installer DLL custom action. The name of the DLL file is ISNetAPI.dll, and its entry point is ISNetSetLogonName.

## ISNetValidateLogonName

Verifies that a valid user name, server, and password combination were entered in the LogonInformation dialogs.

This is a Windows Installer DLL custom action. The name of the DLL file is ISNetAPI.dll, and its entry point is ISNetValidateLogonName.

## ISNetValidateNewUserInfo

Stores the user, group, and server properties that were entered in the LogonInformation dialogs.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetAPI.dll`, and its entry point is `ISNetValidateNewUserInfo`.

### **ISNetworkSharesCosting**

Extracts information from the `ISNetworkShares` table and saves it in a temporary file for network sharing.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetworkShares.dll`, and its entry point is `ISNetworkSharesCosting`.

### **ISNetworkSharesFinalize**

Cleans up temporary files for configuring network shares.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetworkShares.dll`, and its entry point is `ISNetworkSharesFinalize`.

### **ISNetworkSharesInstall**

Configures network sharing for one or more folders.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetworkShares.dll`, and its entry point is `ISNetworkSharesInstall`.

### **ISNetworkSharesRollback**

Rolls back network sharing for one or more folders.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetworkShares.dll`, and its entry point is `ISNetworkSharesRollback`.

### **ISNetworkSharesUninstall**

Removes network sharing for one or more folders.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISNetworkShares.dll`, and its entry point is `ISNetworkSharesUninstall`.

### **ISPrint**

Prints the contents of a `ScrollableText` control on a dialog.

This is a Windows Installer DLL custom action. The name of the DLL file is `SetAllUsers.dll`, and its entry point is `PrintScrollableText`.

### **ISQuickPatchFinalize**

Cleans shared reference counts for a `QuickPatch`.

This is a Windows Installer DLL custom action. The name of the DLL file is `QuickPatchHelper.dll`, and its entry point is `ISQuickPatchFinalize`.

### **ISQuickPatchFixShortcut**

Reinstalls shortcuts for a `QuickPatch`.

This is a Windows Installer DLL custom action. The name of the DLL file is `QuickPatchHelper.dll`, and its entry point is `ISQuickPatchFixShortcut`.

### **ISQuickPatchHelper**

Applies clean feature states for a QuickPatch.

This is a Windows Installer DLL custom action. The name of the DLL file is `QuickPatchHelper.dll`, and its entry point is `ISQuickPatchHelper`.

### **ISQuickPatchInit**

Cleans component and feature states for a QuickPatch.

This is a Windows Installer DLL custom action. The name of the DLL file is `QuickPatchHelper.dll`, and its entry point is `ISQuickPatchInit`.

### **ISQuickPatchInit9X**

Cleans component and feature states for a QuickPatch.

This is a Windows Installer DLL custom action. The name of the DLL file is `QuickPatchHelper.dll`, and its entry point is `ISQuickPatchInit9X`.

### **ISQuickPatchInit9X2**

Cleans component and feature states for a QuickPatch.

This is a Windows Installer DLL custom action. The name of the DLL file is `QuickPatchHelper.dll`, and its entry point is `ISQuickPatchInit9X2`.

### **ISRunSetupTypeAddLocalEvent**

Runs the `AddLocal` events that are associated with the Next button on the `SetupType` dialog. This action needs to be called when the installation does not display the `SetupType` dialog.

This is a Windows Installer DLL custom action. The name of the DLL file is `ISXExpHlp.dll`, and its entry point is `RunSetupTypeAddLocalEvent`.

### **ISSearchReplaceCosting**

Creates a temporary file that has a list of changes that need to be made in text files.

This is a DLL custom action. The name of the DLL file is `isschrpl.dll`, and its entry point is `ISSearchReplaceCosting`.

### **ISSearchReplaceFinalize**

Cleans up temporary files for text file changes.

This is a DLL custom action. The name of the DLL file is `isschrpl.dll`, and its entry point is `ISSearchReplaceFinalize`.

## ISSearchReplaceInstall

Applies text file changes when the product is installed.

This is a DLL custom action. The name of the DLL file is `isschrp1.dll`, and its entry point is `ISSearchReplaceInstall`.

## ISSearchReplaceRollback

Rolls back text file changes and cleans up temporary files for text file changes.

This is a DLL custom action. The name of the DLL file is `isschrp1.dll`, and its entry point is `ISSearchReplaceRollback`.

## ISSearchReplaceUninstall

Applies text file changes when the product is uninstalled.

This is a DLL custom action. The name of the DLL file is `isschrp1.dll`, and its entry point is `ISSearchReplaceUninstall`.

## ISSelfRegisterCosting

Extracts operations to a temporary file for self-registration.

This is a Windows Installer DLL custom action. The name of the DLL file is `isregsvr.dll`, and its entry point is `ISSelfRegisterCosting`.

## ISSelfRegisterFiles

Registers self-registering files.

This is a Windows Installer DLL custom action. The name of the DLL file is `isregsvr.dll`, and its entry point is `ISSelfRegisterFiles`.

## ISSelfRegisterFinalize

Cleans up temporary file from self-registration.

This is a Windows Installer DLL custom action. The name of the DLL file is `isregsvr.dll`, and its entry point is `ISSelfRegisterFinalize`.

## ISSetAllUsers

Sets `ALLUSERS` per upgrade or initial installation requirements.

This is a DLL custom action. The name of the DLL file is `SetAllUsers.dll`, and its entry point is `SetAllUsers`.

## ISSetTARGETDIR

Sets `TARGETDIR` to `[INSTALLDIR]`.

This is a DLL custom action. The name of the DLL file is `SetAllUsers.dll`, and its entry point is `SetTARGETDIR`.

## ISSetupFilesCleanup

Cleans up the temp directory of support files.

This is a DLL custom action. The name of the DLL file is SFHelper.dll, and its entry point is SFCleanupEx.

## ISSetupFilesExtract

Extracts support files to a temp directory.

This is a DLL custom action. The name of the DLL file is SFHelper.dll, and its entry point is SFStartupEx.

## ISSQLQueryDatabases

Finds database catalogs that are available on a specified database server.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLQueryDatabases.

## ISSQLServerCosting

Extracts operations to a temporary file for SQL scripts.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLServerCosting.

## ISSQLServerFilteredList

Finds available servers for SQL scripts.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLServerFilteredList.

## ISSQLServerFinalize

Cleans up temporary files and the state for SQL scripts.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLServerFinalize.

## ISSQLServerInitialize

Adds property names for SQL login password to MsiHiddenProperties.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLServerInitialize.

## ISSQLServerInstall

Runs SQL scripts during an installation.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLServerInstall.

## ISSQLServerList

Finds available servers.

This is a DLL custom action. The name of the DLL file is issqlsrv.dll, and its entry point is ISSQLServerList.

## ISSQLServerRemoveLoginInfo

Removes SQL database login credentials from the Windows registry during an uninstallation.

This is a DLL custom action. The name of the DLL file is `issqlsrv.dll`, and its entry point is `ISSQLServerRemoveLoginInfo`.

## ISSQLServerRollback

Runs SQL scripts during a failed installation or uninstallation.

This is a DLL custom action. The name of the DLL file is `issqlsrv.dll`, and its entry point is `ISSQLServerRollback`.

## ISSQLServerRollbackLoginInfo

During a failed installation or uninstallation, rolls back SQL database login credentials that are stored in the Windows registry.

This is a DLL custom action. The name of the DLL file is `issqlsrv.dll`, and its entry point is `ISSQLServerRollbackLoginInfo`.

## ISSQLServerUninstall

Runs SQL scripts during an uninstallation.

This is a DLL custom action. The name of the DLL file is `issqlsrv.dll`, and its entry point is `ISSQLServerUninstall`.

## ISSQLServerValidate

Tests server connections.

This is a DLL custom action. The name of the DLL file is `issqlsrv.dll`, and its entry point is `ISSQLServerValidate`.

## ISSQLServerWriteLoginInfo

Writes SQL database login credentials to the Windows registry during an installation.

This is a DLL custom action. The name of the DLL file is `issqlsrv.dll`, and its entry point is `ISSQLServerWriteLoginInfo`.

## ISUnSelfRegisterFiles

Unregisters self-registering files.

This is a DLL custom action. The name of the DLL file is `isregsvr.dll`, and its entry point is `ISUnSelfRegisterFiles`.

## ISVerifyScriptingRuntime

Verifies that an InstallScript MSI installation was launched using `Setup.exe`, and if not, it displays the message contained in the property `STANDARD_USE_SETUPEXE`. This custom action is included in all InstallScript MSI projects, and it is scheduled for the beginning of the User Interface sequence.

**Note** ▪ The *ISVerifyScriptingRuntime* custom action is called in an *InstallScript MSI* installation in which the *InstallScript UI* style is the traditional style (which uses the *InstallScript* engine as an external UI handler). It is not called for the new style (which uses the *InstallScript* engine as an embedded UI handler).

To learn more, see [Using the InstallScript Engine as an External vs. Embedded UI Handler for InstallScript MSI Installations](#).

## ISXmlAppSearch

Performs a system search for XML: finds file, performs XPath queries, and stores the results in properties. Driven by the *ISXmlLocator* table.

This is a DLL custom action. The name of the DLL file is *isxmlcfg.dll*, and its entry point is *ISXmlAppSearch*.

## ISXmlCosting

Extracts operations to a temporary file for XML file changes.

This is a DLL custom action. The name of the DLL file is *isxmlcfg.dll*, and its entry point is *ISXmlCosting*.

## ISXmlFinalize

Cleans up temporary files for XML file changes.

This is a DLL custom action. The name of the DLL file is *isxmlcfg.dll*, and its entry point is *ISXmlFinalize*.

## ISXmlInstall

Applies XML file changes.

This is a DLL custom action. The name of the DLL file is *isxmlcfg.dll*, and its entry point is *ISXmlInstall*.

## ISXmlRollback

Rolls back XML file changes.

This is a DLL custom action. The name of the DLL file is *isxmlcfg.dll*, and its entry point is *ISXmlRollback*.

## ISXmlUnInstall

Uninstalls XML file changes.

This is a DLL custom action. The name of the DLL file is *isxmlcfg.dll*, and its entry point is *ISXmlUnInstall*.

## LaunchProgramFileFromSetupCompleteSuccess

Launches an executable file at the end of an installation.

This is a Windows Installer DLL custom action. The name of the DLL file is *SerialNumCAHelper.dll*, and its entry point is *LaunchProgram*.

## LaunchReadmeFileFromSetupCompleteSuccess

Launches a readme file at the end of an installation.

This is a Windows Installer DLL custom action. The name of the DLL file is `SerialNumCAHelper.dll`, and its entry point is `LaunchReadMe`.

### setAllUsersProfile2K

Initializes the `ALLUSERSPROFILE` directory identifier for Windows 2000 or later.

### SetAllUsersProfileNT

Initializes the `ALLUSERSPROFILE` directory identifier for Windows NT 4.

### SetARPINSTALLLOCATION

Sets the value of the `ARPINSTALLLOCATION` property to the fully qualified path for the application's primary folder.

### setUserProfileNT

Initializes the `USERPROFILE` directory identifier.

### ShowMsiLog

Displays the Windows Installer log file in Notepad if the end user selects the **Show the Windows Installer log** check box in the `SetupCompleteSuccess`, `SetupCompleteError`, or `SetupInterrupted` dialogs and then clicks Finish. This works only with Windows Installer 4.0 and later.

### WiseScriptFinalize

Cleans up temporary files for a WiseScript custom action.

This is a DLL custom action. The name of the DLL file is `WiseScriptBridge.dll`, and its entry point is `WiseScriptFinalize`.

### WiseScriptInitialize

Extracts required files for a WiseScript custom action.

This is a DLL custom action. The name of the DLL file is `WiseScriptBridge.dll`, and its entry point is `WiseScriptInitialize`.

### WiseScriptRollback

Cleans up temporary files for a WiseScript custom action.

This is a DLL custom action. The name of the DLL file is `WiseScriptBridge.dll`, and its entry point is `WiseScriptFinalize`.

# Command-Line Tools

In addition to its graphical user interface, InstallShield provides several command-line programs that you can use during build time, for instance, as part of a batch process, or during run time to customize the behavior of your installation.

## Authoring-Time Programs

**Table 1** • Descriptions of Authoring-Time Programs

Task	Program
Scan an IIS Web site and record its settings so that you can import them into an InstallShield project	iisscan.exe

## Build-Time Programs

**Table 2** • Descriptions of Build-Time Programs

Task	Program
Compile an InstallScript file (.rul)	Compile.exe
Build a release; if applicable, also compile the InstallScript	ISCmdBld.exe
Build a release (available for legacy InstallScript projects)	ISBuild.exe
Sign an already-built InstallScript release	iSign.exe
Build a release (InstallScript self-extracting executable files)	ReleasePackager.exe
Modify a Setup.ini file that is embedded in a Basic MSI or InstallScript MSI Setup.exe file	SetupIni.exe

## Run-Time Programs

**Table 3** • Descriptions of Run-Time Programs

Task	Program
Run a Setup.exe installation and pass command-line parameters (Basic MSI, InstallScript, and InstallScript MSI projects)	Setup.exe
Run a Setup.exe installation and pass command-line parameters (Advanced UI and Suite/Advanced UI projects)	Setup.exe
Run an installation (InstallScript projects)	Setup.exe (InstallScript projects)
Run an .msi package	MsiExec.exe
Run a patch package (Windows Installer-based projects) and pass command-line parameters	Update.exe

# Compile.exe

InstallShield includes a command-line compiler that you can invoke from the Command Prompt window or from a DOS batch file. This program, called `Compile.exe`, is in the following folder:

*InstallShield Program Files Folder/System*

---

**Note** ▪ When you build a release from the command line using `ISCmdBld.exe`, the build engine automatically compiles your script; therefore, you do not need to use `Compile.exe` directly unless you want to use compiler options that are different from those specified for the project in InstallShield. For more information, see [ISCmdBld.exe](#).

## Syntax

`Compile script_file [iswi_obl_file] [isrt_obl_file] [ifx_obl_file] switches`

You can pass any or all of your command-line parameters to `Compile.exe` in the form of a command file. To specify a command file to `Compile.exe`, use the following syntax:

`Compile @command_file`

In this example, *command\_file* is the name of a text file, including any extension. You can specify an absolute or relative path with the file name.

You can specify all or part of the command line in a command file. You can use more than one command file in a `Compile` command. `Compile.exe` accepts the command file's input as if it were specified in that location on the command line.

In the command file, each parameter must begin and end on the same line—you cannot use the backslash (\) to combine a parameter across two lines. In the command file, arguments can be separated by spaces or tabs (as on the command line) and by newline (\n) characters.

## Parameters

The following parameters are available for use with the compiler.

**Table 4** • Command-Line Parameters for Compile.exe

Parameter	Description
<b>script_file</b>	<p>Specifies the name of the setup script. Note the following:</p> <ul style="list-style-type: none"> <li>• The file name can include a drive designation and an absolute or relative path. If the file name is unqualified, the compiler will search for the script in the current directory of the current drive.</li> <li>• If the specified setup script uses #include directives to include other files in the setup, and if the file names specified by #include statements do not include a path, you must specify the location of those files with the -i switch unless they reside in the current directory. Note that included files may themselves specify #include directives; be sure the -i switch specifies a search path that can be used to find all included source files.</li> <li>• Long path and file names must be enclosed in double quotation marks.</li> <li>• By default, the setup script created as part of a new InstallShield project is named setup.rul.</li> </ul>
<b>isrt_obl_file</b>	<p>Specifies the name of the library file Isrt.obl. It is not necessary to include the full path for the library file, as long as the path is identified with the -libpath switch.</p> <p>Isrt.obl is in the following directory:</p> <p><i>InstallShield Program Files Folder\Script\Isrt\Lib</i></p> <p>This parameter is required unless you are using the -c or -l switch.</p>
<b>ifx_obl_file</b>	<div>  <p><b>Project</b> • This parameter applies to InstallScript projects.</p> </div> <p>Specifies the name of the library file Ifx.obl. It is not necessary to include the full path for the library file, as long as the path is identified with the -libpath switch.</p> <p>Ifx.obl is in the following directory:</p> <p><i>InstallShield Program Files Folder\Script\Ifx\Lib</i></p> <p>This parameter is required unless you are using the -c or -l switch.</p>

**Table 4** • Command-Line Parameters for Compile.exe (cont.)

Parameter	Description
<b>iswi_obl_file</b>	 <p><b>Project</b> ▪ This parameter applies to the following project types:</p> <ul style="list-style-type: none"> <li>• Basic MSI</li> <li>• InstallScript MSI</li> </ul> <p>Specifies the name of the library file Iswi.obl. It is not necessary to include the full path for the library file, as long as the path is identified with the -libpath switch.</p> <p>Iswi.obl is in the following directory:</p> <p><i>InstallShield Program Files Folder\Script\Iswi\Lib</i></p> <p>This parameter is required unless you are using the -c or -l switch.</p>
<b>ifxobject_obl_file</b>	 <p><b>Project</b> ▪ This parameter applies to InstallScript Object projects.</p> <p>Specifies the name of the library file Ifxobject.obl. It is not necessary to include the full path for the library file, as long as the path is identified with the -libpath switch.</p> <p>Ifxobject.obl is in the following directory:</p> <p><i>InstallShield Program Files Folder\Script\Ifx\Lib</i></p> <p>This parameter is required unless you are using the -c or -l switch.</p>

## Switches

You can pass the following switches to the compiler. If you are not specifying the full path to the script files and library files, you must specify the location of the folders that contain those files by using the `-i` and `-libpath` switches (as noted in the `-i` and `-libpath` descriptions below). All of the other switches are optional.

**Table 5** ▪ Switches for Compile.exe

Switch	Description
<b>/d or -d&lt;variable name=preprocessor define&gt;</b>	<p>Provides a preprocessor definition that is applicable to your InstallScript. Following is an example:</p> <pre>Compile.exe -dVARIABLENAME=Value</pre> <p>The variable name must be a valid InstallScript identifier; the value must be a constant. No space is permitted between the switch and the expression or within the expression.</p> <p>If you reference the preprocessor in InstallScript, use either of the following formats:</p> <ul style="list-style-type: none"> <li>• <code>#ifdef VARIABLENAME</code></li> <li>• <code>#if VARIABLENAME=Value</code></li> </ul> <p>That is, for <code>#ifdef</code> statements, you can use just the value name. For <code>#if</code> statements, use a name=value pair.</p> <p>This parameter is optional.</p> <div>  <p><b>Note</b> ▪ <i>It is recommended that you use this command-line parameter only if a preprocessor is not defined in either of the following areas in InstallShield:</i></p> <ul style="list-style-type: none"> <li>• On the Compile/Link tab of the Settings dialog box, which is displayed when you click Settings on the Build menu</li> <li>• For Basic MSI and InstallScript MSI projects: In the Preprocessor Defines setting for the product configuration in the Releases view</li> </ul> <p><i>If you define a preprocessor in either of these areas in InstallShield and then you use the -d command-line parameter to define the same preprocessor, Compile.exe displays a cannot-define-symbol message to inform you that the preprocessor cannot be redefined through an InstallShield project or product configuration setting.</i></p> </div>
<b>/e or -e</b>	<p>Specifies the maximum number of error messages. The default value is 50. When the maximum number of error messages has been generated, compilation stops.</p>
<b>/g or -g</b>	<p>Specifies that a debugging information file should be produced. This file is given the name of the installation and extension <code>.dbg</code>.</p>

**Table 5** ▪ Switches for Compile.exe (cont.)

Switch	Description
<b>/gi or -gi</b>	<p>Specifies that debugging information should be included in the compiled script file, so a debugging information file is not needed.</p> <p>This option makes the compiled script larger and the installation slower, and makes it easier for others to reverse engineer your code, so it should typically not be used when creating your final installation for distribution to end users.</p>
<b>/i or -i&lt;search path&gt;</b>	<p>Specifies a search path—a list of paths, each separated by a semicolon—that identifies the directories to search for source files that have been included in the main installation's InstallScript code through #include statements. Long path names must be enclosed in double quotation marks.</p> <div>  </div> <p><b>Project</b> ▪ For InstallScript and InstallScript Object projects, you must specify the full paths for the following folders:</p> <ul style="list-style-type: none"> <li>● InstallShield Program Files Folder\Script\Ifx\Include</li> <li>● InstallShield Program Files Folder\Script\Isrt\Include</li> </ul> <p>For Basic MSI and InstallScript MSI projects, you must specify the full paths for the following folders:</p> <ul style="list-style-type: none"> <li>● InstallShield Program Files Folder\Script\Iswi\Include</li> <li>● InstallShield Program Files Folder\Script\Isrt\Include</li> </ul> <p>The aforementioned directories contain the script header files for built-in InstallScript functionality. If you do not specify these folders, compiler errors occur.</p>

**Table 5** ▪ Switches for Compile.exe (cont.)

Switch	Description
<b>/libpath or -libpath&lt;path&gt;</b>	<p>Specifies a single path that identifies a directory to search for libraries such as Ifx.obl, Isrt.obl, or a custom library file. To specify multiple directories, use the -libpath switch multiple times. Long path names must be enclosed in double quotation marks.</p>  <p><b>Project</b> ▪ For InstallScript and InstallScript Object projects, you must specify the full paths for the following folders (unless you have used the full path with the library file names):</p> <ul style="list-style-type: none"> <li>● InstallShield Program Files Folder\Script\Ifx\Lib</li> <li>● InstallShield Program Files Folder\Script\Isrt\Lib</li> </ul> <p>For Basic MSI and InstallScript MSI projects, you must specify the full paths for the following folders (unless you have used the full path with the library file names):</p> <ul style="list-style-type: none"> <li>● InstallShield Program Files Folder\Script\Iswi\Lib</li> <li>● InstallShield Program Files Folder\Script\Isrt\Lib</li> </ul> <p>The aforementioned directories contain the libraries that define the built-in InstallScript functions. If you do not specify these folders or the full paths with the library names, compiler errors occur.</p>
<b>/o or -o&lt;compiled script file name&gt;</b>	<p>Specifies the file name to assign to the compiled script. Note the following:</p> <ul style="list-style-type: none"> <li>● The file name can include a drive designation and an absolute or relative path. If a path is not specified, the compiler will store the compiled script in the current directory.</li> <li>● If this parameter is not specified, the compiled script is given the name of the script file and the extension .inx and is stored in the current directory.</li> <li>● Long path and file names must be enclosed in double quotation marks.</li> </ul>
<b>/q or -q</b>	<p>Suppresses the output of the copyright message and version information.</p>
<b>/v or -v</b>	<p>Sets the warning level to one of the following values:</p> <ul style="list-style-type: none"> <li>● <b>0</b>—Displays no warning messages.</li> <li>● <b>1</b>—Displays any system warning message that InstallShield is unable to handle.</li> <li>● <b>2</b>—Displays Level 1 messages, plus a message if string length exceeds the limit.</li> <li>● <b>3</b>—Displays all warning messages. This is the default setting.</li> </ul>

**Table 5** • Switches for Compile.exe (cont.)

Switch	Description
<b>/w or -w</b>	Specifies the maximum number of warning messages. The default value is 50. When the maximum number of warning messages has been generated, compilation stops.

## Additional Information

- When specifying file names, you can use either short or long file names; however, long file names must be enclosed within double quotation marks.
- If you specify a relative path to a file name (for example `..\..\My Functions`), that path must be relative to the current directory of the current drive at the time that you invoke the compiler.

## Examples

### Sample Command Line for an InstallScript Project

The following command line for an InstallScript project compiles the Setup.rul script file that is located in the C:\InstallShield 2021 Projects\My InstallScript Project\script files folder:

```
"C:\Program Files\InstallShield\2021\System\Compile.exe"
"C:\InstallShield 2021 Projects\My InstallScript Project\script files\setup.rul"
ifx.obl
isrt.obl
-libpath"C:\Program Files\InstallShield\2021\Script\Ifx\Lib"
-libpath"C:\Program Files\InstallShield\2021\Script\Isrt\Lib"
-i"C:\Program Files\InstallShield\2021\Script\Ifx\Include"
-i"C:\Program Files\InstallShield\2021\Script\Isrt\Include"
-i"C:\InstallShield 2021 Projects\My InstallScript Project\script files"
```

### Sample Command Line for an InstallScript MSI or Basic MSI Project

The following command line for an InstallScript MSI or Basic MSI project compiles the Setup.rul script file that is located in the C:\InstallShield 2021 Projects\My New Project\script files folder:

```
"C:\Program Files\InstallShield\2021\System\Compile.exe"
"C:\InstallShield 2021 Projects\My New Project\script files\setup.rul"
ISWI.obl
isrt.obl
-libpath"C:\Program Files\InstallShield\2021\Script\Iswi\Lib"
-libpath"C:\Program Files\InstallShield\2021\Script\Isrt\Lib"
-i"C:\Program Files\InstallShield\2021\Script\Ifx\Include"
-i"C:\Program Files\InstallShield\2021\Script\Isrt\Include"
-i"C:\InstallShield 2021 Projects\My New Project\script files"
```

# ISCmdBld.exe

You can build a release from the command line using ISCmdBld.exe for Windows Installer-based projects and for InstallScript projects. If your project includes InstallScript, ISCmdBld.exe also compiles it before building the release.

## Syntax

The following statement illustrates running ISCmdBld.exe to build the release **Othello Beta**:

```
ISCmdBld.exe -p "C:\InstallShield 2021 Projects\My Othello Project\Othello.ism" -r "Othello Beta" -c
COMP -a "Build 245"
```

The first parameter in the example above, starting with -p, is the path to the .ism file that you would like to build. Next, -r Othello Beta is the name of the release. The parameter -c COMP specifies that you would like your package to be compressed into one file. Finally, -a "Build 245" points to the specific product configuration.

If a command-line build completes without any errors, InstallShield sets the environment variable ERRORLEVEL to 0. If an error occurs during a command-line build, ERRORLEVEL is set to 1. If ERRORLEVEL is set to any other value, this typically indicates an invalid parameter was passed to ISCmdBld.exe, and the specific cause of the error is displayed in the Command Prompt window in which ISCmdBld.exe was running.

## Command-Line Parameters

**Project** ▪ Some of the ISCmdBld.exe command-line parameters are applicable to only certain project types.

**Table 6** ▪ ISCmdBld.exe Command-Line Parameters

Parameter	Project Type	Description
<b>-a &lt;product configuration&gt;</b>	Basic MSI, InstallScript MSI, Merge Module	This parameter specifies the product configuration for the release. If it does not exist, it is created. Although this parameter is not required, you should include it if you are including the parameter for the release name.
<b>-b &lt;build location&gt;</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/Advanced UI	<p>The fully qualified path to the folder where you want the output folders and files to be placed. UNC paths are acceptable. The built installation's files will be located in the Disk Images\Disk1 subfolder of the location that you specify.</p> <p>This parameter is optional. If it is left unspecified, the build will place the build package and files in the directory specified in the File Locations tab of the Options dialog box.</p> <p>Enclose long file names in quotation marks.</p>
<b>-c &lt;release configuration&gt;</b>	Basic MSI, InstallScript MSI	<p>This parameter enables you to specify whether your release is compressed into one file or remains uncompressed in multiple files. The valid arguments for this parameter are COMP and UNCOMP. To specify that your release be compressed into one file, use the COMP argument. If you do not want your release compressed, use the UNCOMP argument.</p> <p>If the parameter is omitted for a release that already exists, the configuration is based on what was specified in the InstallShield interface. If the parameter is omitted for a new release, the files remain uncompressed.</p>

**Table 6 •** ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-d &lt;variable name=preprocessor define&gt;</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object	<p>Use this parameter to provide a preprocessor definition that is applicable to your InstallScript. To specify more than one preprocessor definition, separate each with a comma, as in the following example:</p> <pre>ISCmdBld.exe -d VARIABLENAME1=Value1,VARIABLENAME2=Value2</pre> <p>If you reference the preprocessor in InstallScript, use either of the following formats:</p> <ul style="list-style-type: none"> <li>• <code>#ifdef VARIABLENAME</code></li> <li>• <code>#if VARIABLENAME=Value</code></li> </ul> <p>That is, for <code>#ifdef</code> statements, you can use just the value name. For <code>#if</code> statements, use a name=value pair.</p> <p>This parameter is optional.</p> <div data-bbox="756 846 792 892" data-label="Image"></div> <p><b>Note •</b> <i>It is recommended that you use this command-line parameter only if a preprocessor is not defined in either of the following areas in InstallShield:</i></p> <ul style="list-style-type: none"> <li>• On the Compile/Link tab of the Settings dialog box, which is displayed when you click Settings on the Build menu</li> <li>• For Basic MSI and InstallScript MSI projects: In the Preprocessor Defines setting for the product configuration in the Releases view</li> </ul> <p><i>If you define a preprocessor in either of these areas in InstallShield and then you use the -d command-line parameter to define the same preprocessor, ISCmdBld.exe displays a cannot-define-symbol message to inform you that the preprocessor cannot be redefined through an InstallShield project or product configuration setting.</i></p>
<b>-e &lt;Y/N&gt;</b>	Basic MSI, InstallScript MSI, Merge Module	<p>For installation projects, this parameter specifies whether you want to create a Setup.exe file along with your installation. Specify <code>-e Y</code> to build Setup.exe or <code>-e N</code> to just create an installation.</p> <p>For merge module projects, the meaning of <code>-e</code> is different from installation projects. Specifying <code>-e n</code> will cause the merge module to be built and then copied to the merge modules folder. Specifying <code>-e Y</code> will cause the merge module to only be built but not copied to the merge modules folder.</p>

**Table 6** • ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-f &lt;release flags&gt;</b>	Advanced UI, Basic MSI, InstallScript MSI, Suite/ Advanced UI	Use this parameter to specify any release flags that you would like to include in your release. Separate multiple flags with commas.
<b>-fv &lt;version number&gt;</b>	Basic MSI, InstallScript MSI	<p>If you want to override the default file version for <b>Setup.exe</b> with your own version number, use this parameter to specify the file version, such as <code>-fv 2.5.0.0</code>. This is an optional parameter.</p> <div>  <p><b>Note</b> • The file version always contains four fields. If you specify fewer than four fields for your file version, the remaining fields are filled with zeros. For example, if you specify a file version of 1.1, the file version that is used in the version resources of <b>Setup.exe</b> is 1.1.0.0.</p> </div>
<b>-g &lt;minimum target MSI version&gt;</b>	Basic MSI, InstallScript MSI, Merge Module	Use this parameter to specify the minimum version of Windows Installer that the installation requires on the target machine—for example, <code>2.0.2600.0</code> . This parameter is optional. The default is the latest version of Windows Installer that the InstallShield interface supports.
<b>-h</b>	Basic MSI, InstallScript MSI	To skip the upgrade validators at the end of the build, use this parameter.
<b>-i &lt;.ini file path&gt;</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	<p>Instead of passing all of your parameters on the command line, you can include them all in an initialization (.ini) file and call that file from the command line. For more information, see <a href="#">Passing Command-Line Build Parameters in an .ini File</a>.</p> <p>Absolute and relative paths are acceptable.</p> <p>Enclose long file names in quotation marks.</p>
<b>-j &lt;minimum target Microsoft .NET Framework version&gt;</b>	Basic MSI, InstallScript MSI	This parameter specifies the minimum version of the .NET Framework that the installation requires on the target machine—for example, <code>1.0.3705.2</code> . This parameter is optional. The default is the latest version of the .NET Framework that the InstallShield interface supports.

**Table 6 •** ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-l &lt;path variable&gt;="new path"</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/Advanced UI	<p>Use this parameter to override a path variable that has been specified in the Path Variables view. You can specify this parameter multiple times, once for each path variable override. For example:</p> <pre>ISCmdBld.exe -l VariableName="C:\Path" -l VariableName2="C:\Path2"</pre> <p>To reference a file in a sibling project that is within the same Visual Studio solution folder, use the predefined path variable called VSSolutionFolder. For more information, see <a href="#">Using the VSSolutionFolder Path Variable with Visual Studio Solutions</a>.</p>
<b>-licCheckTimeOut &lt;seconds&gt;</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/Advanced UI	<p>Use this parameter to set the time period to check the availability of the license from the license server.</p> <p>For example, in the following command line, IsCmdBld waits for the license availability in the configured license server for the 40 secs and checks the availability in 15 secs intervals. If the license is available before 40 secs, then the build continues with the available license else the build fails with the existing reason (failed to get the license).</p> <pre>ISCmdBld.exe -p "C:\InstallShield 2021 projects\TestProj.ism" -licCheckTimeOut 40</pre>
<b>-m &lt;.cub file name&gt;</b>	Basic MSI, InstallScript MSI, Merge Module	<p>Use this parameter if you want to validate the installation or merge module package after it is built. Pass the path of the .cub file name with this parameter.</p> <p>Absolute and relative paths are acceptable. To use multiple .cub files, separate each path with a semicolon (;). Enclose long file names in quotation marks.</p> <p>For example, in the following command line, the -m parameter indicates that validation should be performed with the InstallShield Validation Suite for Windows 7 (ISWin7.cub) and the Full MSI Validation Suite (darice.cub):</p> <pre>ISCmdBld.exe -m "..\Support\Validation\ISWin7.cub;..\Support\Validation\darice.cub"</pre>

**Table 6 •** ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-n</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	<p>Specify this parameter if you do not want Setup.ru1 to be compiled as part of the build process.</p> <p>Note that if you are building from the command line and specifying an .ini file with the build settings, you can specify the following in the [Project] section of the .ini file, instead of adding the -n command line build flag:</p> <pre>[Project] CompileScript=No</pre> <p>Like the command-line build flag, this CompileScript keyword helps you specify whether Setup.ru1 should be compiled as part of the build process.</p>  <p><b>Note •</b> The -n parameter cannot be used with the -q3 parameter.</p>
<b>-o &lt;merge module search path&gt;</b>	Basic MSI, InstallScript, InstallScript MSI	<p>This parameter specifies one or more comma-delimited folders that contain the merge module files (.msm) that are referenced by your project.</p> <p>InstallShield provides additional ways for specifying the folders that contain merge modules. For more information, see <a href="#">Specifying the Directories that Contain Merge Modules</a>.</p>
<b>-p &lt;project location&gt;</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/ Advanced UI	<p>Pass the path to the project (.ism) file. This path can be fully qualified, relative, or just the file name. If only the project file name is passed, the file is retrieved relative to the current working directory. For example:</p> <pre>ISCmdBld.exe -p "C:\InstallShield 2021 Projects\MyProject1\MyProject1.ism"</pre> <p>UNC paths are also acceptable. Enclose long file names in quotation marks.</p> <p>This is the only required parameter.</p>
<b>-patch_config &lt;patch configuration&gt;</b>	Basic MSI, InstallScript MSI	<p>Use this parameter to build a standard patch. Pass the name of the patch configuration in the Patch Design view that you want to build. For example, the following command line builds the patch configuration called Version 1.2 in the MyProject1.ism project:</p> <pre>ISCmdBld.exe -p "C:\InstallShield 2021 Projects\MyProject1\MyProject1.ism" -patch_config "Version 1.2"</pre>

**Table 6** • ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-prqpath</b> <b>&lt;InstallShield</b> <b>prerequisite search</b> <b>path&gt;</b>	Basic MSI, InstallScript, InstallScript MSI	<p>This parameter specifies one or more comma-delimited folders that contain the InstallShield prerequisite files (.prq) that are referenced by your project.</p> <p>InstallShield provides additional ways for specifying the folders that contain InstallShield prerequisite files. For more information, see <a href="#">Specifying the Directories that Contain InstallShield Prerequisites</a>.</p>
<b>-q1</b>	Basic MSI, InstallScript MSI, Merge Module	<p>Builds only the Windows Installer tables for your release. If you have not built this installation already, a new .msi file is created, but no files are added to your installation. If you have built your installation already, the .msi file is updated when all the tables are built, but, again no files are transferred. Ideally, this option is to be used to test the user interface of your installation.</p> <p></p> <p><b>Note</b> ▪ The -q1 parameter cannot be used with the -q2 or -q3 parameters.</p>
<b>-q2</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	<p>For Basic MSI, InstallScript MSI, and Merge Module projects: Builds the Windows Installer tables and refreshes files. This option rebuilds your .msi file and updates the Files table, including any new or changed files in your installation. Changed files are updated only if the size or time stamp differs from the copy already included in the build. References to deleted files are removed from the installation, but the file remains in the build location. This type of build can be run only after a complete build has been performed, and it works only when the media is an uncompressed network image.</p> <p>For InstallScript and InstallScript Object projects: Rebuilds only those portions of the release that have changed since the last build. If this parameter is not used, the entire file media library is rebuilt.</p> <p></p> <p><b>Note</b> ▪ The -q2 parameter cannot be used with the -q1 or -q3 parameters.</p>

**Table 6** • ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-q3</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	<p>Compiles only Setup.rul.</p> <p>For Basic MSI projects, this parameter also streams ISSetup.dll into the Binary table of the .msi package, if one was previously built.</p>  <p><b>Note</b> ▪ The -q3 parameter cannot be used with the -q2 or -q3, or -n parameters.</p>  <p><b>Note</b> ▪ This parameter does not upgrade the project. If your project was created with InstallShield Developer 8 or earlier, you should upgrade it to the latest version of InstallShield before using -q3. For example, use -u to upgrade.</p>
<b>-r &lt;release name&gt;</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/ Advanced UI	<p>The release name as specified in the Releases view. You can use an existing release name or create a new one.</p> <p>Although this parameter is not required, you should include it if you are including -a, the parameter for product configurations.</p>
<b>-s</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	<p>This parameter enables you to build your release in silent mode. Silent builds are useful if you want to run the build without displaying any errors or warning messages.</p> <p>This parameter is optional.</p>
<b>-se or -SE</b>	Basic MSI, InstallScript, InstallScript MSI, Suite/ Advanced UI, QuickPatch, Merge Module	<p>This parameter allows you to run the build without displaying any information except error messages. Use this parameter to build and get only build errors (errors, fatal errors, and validation errors).</p> <p>This parameter is optional.</p>

**Table 6 •** ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-t &lt;Microsoft .NET Framework path&gt;</b>	Basic MSI, InstallScript MSI	<p>Regasm.exe and InstallUtilLib.dll are utilities that are included with each version of the .NET Framework. This parameter specifies the path for the directory that contains the installed 32-bit version of these files that you want to use at build time for releases that include .NET installer classes and COM interop. This is not the path to .NET Framework redistributable files.</p>  <p><b>Note</b> ▪ If you are using InstallShield on a 64-bit system, ISCmdBld.exe determines the location of the corresponding 64-bit version of the .NET Framework based on the path that you specify for this parameter, and ISCmdBld.exe uses the 64-bit location of Regasm.exe and InstallUtilLib.dll when appropriate.</p>
<b>-u</b>	Basic MSI	This parameter enables you to upgrade—but not build—your release. You can use this parameter to upgrade an installation project that you created using InstallShield—Windows Installer Edition version 2.03 or earlier.
<b>-v</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/ Advanced UI	This parameter enables you to create a verbose build log file that may be useful if Revenera Support is helping you troubleshoot an issue with your installation.
<b>-w</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	This parameter treats warnings that occur during the build process as errors. Each warning increments the error count by one.
<b>-x</b>	Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module	If you want the build to stop when it encounters an error, use the -x parameter. If you want the build to stop when it encounters a warning, use this parameter in conjunction with the -w parameter.

**Table 6 •** ISCmdBld.exe Command-Line Parameters (cont.)

Parameter	Project Type	Description
<b>-y &lt;product version&gt;</b>	Advanced UI, Basic MSI, InstallScript MSI, Merge Module, Suite/ Advanced UI	<p>This parameter enables you to specify a product version from the command line. This is especially helpful if you want to increment the build version (the third field) of the product version. For example, to set the product version to 1.0.5:</p> <pre>ISCmdBld.exe -y "1.0.5"</pre> <p>For information on valid product version numbers, see <a href="#">Specifying the Product Version</a>.</p> <p>This parameter is optional.</p>
<b>-z &lt;property name=property value&gt;</b>	Advanced UI, Basic MSI, InstallScript MSI, Merge Module, Suite/ Advanced UI	<p>In Basic MSI, InstallScript MSI, and Merge Module projects, this parameter enables you to override the value of a Windows Installer property. In Advanced UI and Suite/Advanced UI projects, this parameter enables you to override the value of an Advanced UI or Suite/Advanced UI property.</p> <p>For example, to set the value of the property called <code>PropertyName</code> to <code>PropertyValue</code>, use the following command line:</p> <pre>ISCmdBld.exe -z PropertyName=PropertyValue</pre> <p>If you want to set the value to a string that includes one or more spaces, use quotation marks; for example, to set the value of the property called <code>PropertyName</code> to <code>My Property Value</code>, use the following command line:</p> <pre>ISCmdBld.exe -z "PropertyName=My Property Value"</pre> <p>If you specify a property that does not exist in the Property table, InstallShield creates the property in the installation that it builds.</p> <p>If you specify both the <code>-y</code> parameter to override the product version, and the <code>-z</code> parameter to override the <code>ProductVersion</code> property, InstallShield uses the value specified for the <code>-y</code> parameter.</p> <p>This parameter is optional.</p>
<b>cert_password</b>	Advanced UI, Basic MSI, InstallScript, InstallScript MSI, InstallScript Object, Merge Module, Suite/ Advanced UI	<p>This parameter specifies the digital certificate password, this is an optional parameter. If it is not specified, the password configured in the project is used to sign the files.</p>

# ISBuild.exe

**Project** ▪ This information applies to InstallShield projects.

ISBuild.exe is a command-line tool that is available for legacy InstallShield projects. The following parameters are associated with ISBuild.exe:

**Table 7** ▪ Command-Line Parameters for ISBuild.exe

Parameter	Description
<b>-p &lt;project file&gt;</b>	<p>This specifies the fully qualified path and file name of the project file. By default, the project file is in the following location:</p> <p>C:\InstallShield 2021 Projects\Project Name\Project File</p> <p>This parameter should be enclosed in quotation marks.</p>
<b>-m &lt;media name&gt;</b>	<p>This specifies the media name for the media that will be built. This parameter should be enclosed in quotation marks.</p>
<b>-b &lt;build location&gt;</b>	<p>This specifies the fully qualified path to the folder where you want the output folders and files to be placed. This parameter is optional.</p>
<b>-s</b>	<p>This runs ISBuild.exe in silent mode. This parameter is optional.</p>
<b>-r</b>	<p>This indicates that the media should refresh the build. The default is a complete rebuild. This parameter is optional.</p>

# IISscan.exe

**Edition** ▪ The ability to import IIS data into an InstallShield project is available only in the Premier edition of InstallShield.

The IIS scanner (IISscan.exe) is a tool that scans an IIS Web site and records the values of the settings that you can configure in the Internet Information Services view in InstallShield. IISscan.exe creates an XML file that contains all of the values. You can use this XML file to import the values into the Internet Information Services view. Then you can modify the settings as needed.

When you use IISscan.exe to scan a Web site, you must place the IISscan.exe file on the machine that contains the IIS Web site.

**Note** ▪ IISscan.exe requires administrative privileges. Therefore, you may need to launch it from an elevated Command Prompt window.

IISscan.exe is installed in the following location:

*InstallShield Program Files Folder\System*

## Syntax

```
iisscan.exe -website "Site Name" -outfile "C:\PathToFile\FileName.xml"
```

## Parameters

**Table 8** • Command-Line Parameters for IISscan.exe

Parameter	Description
<b>-website</b>	Specify the name of the Web site on the IIS server that you want to scan.
<b>-outfile</b>	Specify the full path and name of the XML file that you want the scanner to create.  This parameter is optional. If you do not pass this parameter, the IIS scanner records the IIS settings in a file called iisscan.xml in the same directory that contains the IIS scanner.

**Tip** • InstallShield lets you configure filters if you want to prevent certain IIS data—such as Web sites, applications, virtual directories, application pool, or any of their settings—from ever being imported into the Internet Information Services view. To learn more, see [Filtering IIS Data When Importing a Web Site and Its Settings into an InstallShield Project](#).

# iSign.exe

**Project** • This information applies to the following project types:

- InstallScript
- InstallScript Object

Use the command-line tool iSign.exe to digitally sign a release of an InstallScript project from the command line after you have built the release.

iSign.exe is in the following directory:

*InstallShield Program Files Folder\System*

iSign.exe lets you choose between the following options:

- You can specify the .pfx certificate file on your machine that you want to use for signing.
- You can reference a certificate store that contains the certificate that you want to use for signing.

## Syntax

```
iSign.exe [options] PathToData1.hdrFile
```

For example, for signing with a .pfx file:

```
iSign.exe -pfx "C:\Temp\MyFile.pfx" -p "Password" "C:\InstallShield 2021\MyProject\Media\Release 1\Disk
Images\Disk1\data1.hdr"
```

For signing with a certificate in a certificate store:

```
iSign.exe -store "Root" -sl "Machine" ss "My Certificate" "C:\InstallShield 2021\MyProject\Media\Release
1\Disk Images\Disk1\data1.hdr"
```

## Command-Line Parameters

Following is a list of the parameters that you can use with iSign.exe. Note that some are available only if you are using a .pfx file, and some are available only if you are using a certificate in a certificate store.

**Table 9** • Command-Line Parameters for iSign.exe

Parameter	Signing Method	Description
<b>-pfx &lt;path to .pfx file&gt;</b>	.pfx file	Specify the fully qualified path to the .pfx file that contains the certificate that you want to use to sign your release.
<b>-p &lt;password&gt;</b>	.pfx file	<p>If the .pfx file that you are using has a password, specify it with this parameter.</p> <p>If your certificate is protected by a password but you do not enter it for this parameter, signing with a .pfx file fails.</p>  <p><b>Note</b> ▪ This parameter is not applicable if the certificate that you are using for signing is in a certificate store. Note that if the certificate was imported into the store with password protection, you will be prompted to enter the password while signing with iSign.exe.</p>
<b>-store &lt;store name&gt;</b>	certificate in certificate store	<p>Specify the name of the certificate store that contains the certificate that you want to use. Available options are:</p> <ul style="list-style-type: none"> <li>• My</li> <li>• Root</li> <li>• Trust</li> <li>• CA</li> </ul>
<b>-sl &lt;store location&gt;</b>	certificate in certificate store	<p>Specify the location of the certificate store that contains the certificate that you want to use. Available options are:</p> <ul style="list-style-type: none"> <li>• User</li> <li>• Machine</li> </ul>
<b>-ss &lt;subject&gt;</b>	certificate in certificate store	Specify the subject of the certificate that you want to use. This parameter is applicable if the certificate is in a certificate store.

# ReleasePackager.exe

---

**Project** ▪ *This information applies to InstallScript projects.*

Use ReleasePackager.exe to build a self-extracting executable file from the command line. This can be useful if you are building from a batch file.

ReleasePackager.exe is installed in the following location:

*InstallShield Program Files Folder\System*

## Syntax

```
ReleasePackager.exe "disk_images_folder" "package_file" ["icon_file" [icon_index]]
```

## Parameters

**Table 10** • Command-Line Parameters for ReleasePackager.exe

Parameter	Description
<b>disk_images_folder</b>	This optional parameter specifies the folder that contains the disk images to be incorporated in the self-extracting executable file. A typical value is:  C:\InstallShield 2021 Projects\ProjectName\Media\Releasename\Disk Images
<b>package_file</b>	This parameter specifies the fully qualified name of the self-extracting executable file. A typical value is:  C:\InstallShield 2021 Projects\Projectname\Media\Releasename\Package\Packagename.exe
<b>icon_file</b>	This optional parameter specifies the fully qualified name of the file that contains the icon you want to use for your self-extracting executable file.
<b>icon_index</b>	This optional parameter specifies the numeric index of the icon from <i>icon_file</i> that you want to use for your self-extracting executable file. If you do not specify an index, the icon at index 0 is used.
<b>-s</b>	This optional parameter is available for running ReleasePackager.exe in silent mode. To pass this parameter to ReleasePackager.exe, the syntax is as follows:  ReleasePackager.exe "disk_images_folder" "package_file" ["icon_file" [icon_index]] -s  Note that the -s parameter must be specified after the other parameters. If you do not want to specify an icon file or icon index, you must specify the default values of a null string ("") for the icon file and 0 for the icon index.

## Example

```
ReleasePackager.exe "C:\InstallShield 2021 Projects\My Project\Media\My Release\Disk Images"
"C:\InstallShield 2021 Projects\My Project\Media\My Release\Package\MyPackage.exe"
"C:\My Icon Files\MyIcons.dll" 2 -s
```

## SetupIni.exe

**Project** • This information applies to the following project types:

- Basic MSI
- InstallScript MSI

SetupIni.exe is a command-line tool that enables you to modify a Setup.ini file that is embedded in a Setup.exe or Update.exe file. Setup.ini is an initialization file that is created during the build process of installation projects to control certain elements of the installation.

SetupIni.exe is installed in the following location:

*InstallShield Program Files Folder\System*

## Syntax

SetupIni.exe *PathToSetup.exe Section Key Value*

## Parameters

**Table 11** • Command-Line Parameters for SetupIni.exe

Parameter	Description
<b>PathToSetup.exe</b>	Specify the path and file name to the Setup.exe file that contains the Setup.ini file that you want to modify.  If the path contains spaces, enclose it within quotation marks.
<b>Section</b>	Specify the name of the section that you want to modify.
<b>Key</b>	Specify the name of the key whose value you want to set.
<b>Value</b>	Specify the value that you want to use for the specified key.  If the value contains spaces, enclose it within quotation marks.

## Example

```
SetupIni.exe "C:\InstallShield 2021 Projects\My Project\Media\My Release\Package\MySetup.exe" Startup
CmdLine MYPROPERTY="MyValue"
```

# MsiExec.exe Command-Line Parameters

MsiExec.exe is the executable program of the Windows Installer used to interpret installation packages and install products on target systems. After you [build your release](#), you can install your Windows Installer package (.msi) from the command line.

Your Windows Installer package can be accessed from the folder that contains your built release. The default location is as follows:

```
C:\InstallShield 2021 Projects\ProjectName\ReleaseName\DiskImages\Disk1\ProductName.msi
```

After building a release of your product, you can install it from the command line:

```
msiexec /i "C:\InstallShield 2021 Projects\ProjectName\ReleaseName\DiskImages\Disk1\ProductName.msi"
```

The table below provides a detailed description of MsiExec.exe command-line parameters.

**Table 12** • MsiExec.exe Command-Line Parameters

Parameter	Description
<b>/i &lt;package&gt; or &lt;product code&gt;</b>	<p>Use this format to install the product Othello:</p> <pre>msiexec /i "C:\InstallShield 2021 Projects\Othello\Trial Version\Release\DiskImages\Disk1\Othello Beta.msi"</pre> <p>Product Code refers to the GUID that is automatically generated in the Product Code property of your product's project view.</p>
<b>/f [p o e d c a u m s v] &lt;package&gt; or &lt;product code&gt;</b>	<p>Installing with the /f option will repair or reinstall missing or corrupted files.</p> <p>For example, to force a reinstall of all files, use the following syntax:</p> <pre>msiexec /fa "C:\InstallShield 2021 Projects\Othello\Trial Version\Release\DiskImages\Disk1\Othello Beta.msi"</pre> <p>Use the aforementioned syntax in conjunction with the following flags:</p> <ul style="list-style-type: none"> <li>● <b>p</b> reinstalls a file if it is missing</li> <li>● <b>o</b> reinstalls a file if it is missing or if an older version of the file is present on the user's system</li> <li>● <b>e</b> reinstalls a file if it is missing or if an equivalent or older version of the file is present on the user's system</li> <li>● <b>c</b> reinstalls a file if it is missing or if the stored checksum of the installed file does not match the new file's value</li> <li>● <b>a</b> forces a reinstall of all files</li> <li>● <b>u</b> or <b>m</b> rewrite all required user registry entries</li> <li>● <b>s</b> overwrites any existing shortcuts</li> <li>● <b>v</b> runs your application from the source and re-caches the local installation package</li> </ul>
<b>/a &lt;package&gt;</b>	<p>The /a option allows users with administrator privileges to install a product onto the network.</p>

Table 12 ▪ MsiExec.exe Command-Line Parameters (cont.)

Parameter	Description
<code>/x &lt;package&gt; or &lt;product code&gt;</code>	<p>The <code>/x</code> option uninstalls a product.</p> <div></div> <p><b>Project ▪</b> For InstallScript MSI projects in which the InstallScript UI style is the new style (which uses the InstallScript engine as an embedded UI handler): If you try to uninstall the product through the command line using the statement <code>Msiexec.exe /x {ProductCode}</code>, the uninstallation may be successful. However, the Windows Installer displays an error dialog near the end of the uninstallation. The error dialog indicates that the Windows Installer service could not be accessed.</p> <p>To perform an uninstallation from the command line in this scenario, the current recommended method is to use one of the following:</p> <pre>msiexec.exe /i {ProductCode} REMOVE=ALL</pre> <pre>msiexec.exe /x {ProductCode} /qn</pre> <p>This is not necessary if your InstallScript MSI project is using the traditional style for the InstallScript UI (which uses the InstallScript engine as an external UI handler).</p> <p>To learn more, see <a href="#">Using the InstallScript Engine as an External vs. Embedded UI Handler for InstallScript MSI Installations</a>.</p>
<code>/j [u m] &lt;package&gt;</code> <code>/j [u m] &lt;package&gt; /t &lt;transform list&gt;</code> <code>/j [u m] &lt;package&gt; /g</code> <code>/j &lt;language ID&gt;</code>	<p>Building with the <code>/j &lt;package&gt;</code> option advertises the components of your application on the end user's computer</p> <ul style="list-style-type: none"><li>• <code>u</code> advertises components only to the current user</li><li>• <code>m</code> advertises components to all users of the computer</li><li>• <code>g</code> specifies language ID</li><li>• <code>t</code> applies a transform to your advertised product</li></ul> <p>Transforms allow the synchronization of applications across different languages. For example, if you upgrade the English version of your product, you could apply a transform to automatically upgrade the French version of your product.</p>

**Table 12** • MsiExec.exe Command-Line Parameters (cont.)

Parameter	Description
<b>/L[i w e r u c m o p v x + ! *] &lt;log file&gt;</b>	<p>Use the /L option to specify the path to the log file. Optionally include one or more of the following flags to indicate which information to record in the log file:</p> <ul style="list-style-type: none"> <li>• i logs status messages.</li> <li>• w logs non-fatal warning messages.</li> <li>• e logs any error messages.</li> <li>• a logs the commencement of action sequences.</li> <li>• r logs action-specific records.</li> <li>• u logs user requests.</li> <li>• c logs initial user interface parameters.</li> <li>• m logs out-of-memory messages.</li> <li>• o logs out-of-disk-space messages.</li> <li>• p logs all of the properties and their values at the end of the installation.</li> <li>• v logs verbose output.</li> <li>• x logs extra debugging information.</li> <li>• + appends the information to an existing log file.</li> <li>• ! flushes each line to the log.</li> <li>• * is a wild-card character that enables you to log all information (excluding the verbose output that v provides and the extra debugging information that x provides).</li> </ul> <p>For example, to generate a log file that logs everything verbosely, use the following:</p> <pre>/L*v "C:\MyLogFiles\package.log"</pre>
<b>/p &lt;patch package&gt;</b>	<p>Use the /p option to apply a patch to an installed product. To patch an installed administrative image, combine this option with /a as shown:</p> <pre>/p PatchPackage /a Package</pre>

**Table 12** • MsiExec.exe Command-Line Parameters (cont.)

Parameter	Description
<b>/q [n b r f]</b>	<p>The /q option is used to set the user interface level in conjunction with the following flags:</p> <ul style="list-style-type: none"> <li>• q or qn creates no user interface</li> <li>• qb creates a basic user interface</li> </ul> <p>The following user interface settings display a modal dialog box at the end of installation:</p> <ul style="list-style-type: none"> <li>• qr displays a reduced user interface</li> <li>• qf displays a full user interface</li> <li>• qn+ displays no user interface</li> <li>• qb+ displays a basic user interface</li> </ul>
<b>/? or /h</b>	Either command displays Windows Installer copyright information
<b>/y &lt;file name&gt;</b>	This command calls the DllRegisterServer entry-point function of the DLL or OCX file specified in <file name>.
<b>/z &lt;file name&gt;</b>	This command calls the DllUnregisterServer entry-point function of the DLL or OCX file specified in <file name>.
<b>/n {product code}</b>	<p>The /n &lt;product code&gt; option is available for patches that are created in the Patch Design view for <b>Basic MSI projects that support the installation of multiple instances of a product</b>.</p> <p>Use the /n option with the /p option to specify the product code of the instance to which you want to apply a patch. For example:</p> <pre>msiexec /p mypatch.msp /n {00000001-0002-0000-0000-624474736554}</pre>
<b>TRANSFORMS</b>	<p>Use the TRANSFORMS command-line parameter to specify any transforms that you would like applied to your base package. Your transform command-line call might look something like this:</p> <pre>msiexec /i "C:\InstallShield 2021 Projects\Othello\Trial Version\Release\DiskImages\Disk1\Othello.msi" TRANSFORMS="New Transform 1.mst"</pre> <p>You can separate multiple transforms with a semicolon. Because of this, it is recommended that you do not use semicolons in the name of your transform because the Windows Installer service will interpret those incorrectly.</p>

**Table 12** ▪ MsiExec.exe Command-Line Parameters (cont.)

Parameter	Description
<b>Properties</b>	<p>All public properties can be set or modified from the command line. Public properties are distinguished from private properties by the fact that they are in all capital letters. For example, COMPANYNAME is a public property.</p> <p>To set a property from the command line, use the following syntax: <i>PROPERTY=VALUE</i>. If you wanted to change the value of COMPANYNAME, you would enter:</p> <pre>msiexec /i "C:\InstallShield 2021 Projects\Othello\Trial Version\Release\DiskImages\Disk1\Othello.msi" COMPANYNAME="My Software Company"</pre>

For information on passing MsiExec.exe command-line parameters through Setup.exe, see [Setup.exe and Update.exe Command-Line Parameters](#).

## Setup.exe and Update.exe Command-Line Parameters

Setup.exe can accept a number of command-line parameters. Update.exe (available only for Basic MSI and InstallScript MSI projects) accepts nearly all of the same command-line parameters. Using these parameters, end users can specify such data as the language that the installation should run in and whether to launch Setup.exe silently. For Basic MSI and InstallScript MSI, end users can also pass parameters through Setup.exe to the included .msi file.

**Note** ▪ Command-line options that require a parameter must be specified with no space between the option and its parameter. For example, *Setup.exe /v "ALLUSERS=2"* is valid, while *Setup.exe /v "ALLUSERS=2"* is not. Quotation marks around an option's parameter are required only if the parameter contains spaces. If a path within a parameter contains spaces, you may need to use quotation marks within quotation marks, as in the following example:

```
Setup.exe /v"INSTALLDIR=\"c:\My Files\""
```

**Project** ▪ Some of the command-line options apply to only certain project types. Project-specific information is listed for each option.

### Built-In Command-Line Parameters

This section describes valid command-line parameters for Setup.exe. The parameters are organized into the following categories:

- [Silent Installations](#)
- [Special Installation Modes](#)
- [Passing Data to the Installation](#)

- [Download and Cache Locations \(Basic MSI and InstallScript MSI Projects\)](#)
- [Debugging](#)
- [SMS Data](#)
- [Minimum UI](#)
- [Miscellaneous](#)

## Silent Installations

**Table 13** • Parameters for Silent Installations

Parameter	Project Type	Description
<b>/p"password"</b>	Basic MSI, InstallScript MSI	<p>If you configured the password-related settings for your release on the <a href="#">Setup.exe tab in the Releases view</a>, the end user must specify the password with the /p option when running the installation silently. A typical command is as follows:</p> <pre>Setup.exe /s /p"password"</pre>
<b>/r</b>	InstallScript, InstallScript MSI	<p>Use this command line to run the installation in record mode.</p> <p>In order to run an InstallScript MSI or InstallScript installation in silent mode, you must first run Setup.exe with the /r option to generate a response file, which stores information about the data entered and options selected by the user at run time.</p> <p>Launching an InstallScript MSI or InstallScript installation with the /r parameter displays all the run-time dialogs and stores the data in a file called <a href="#">Setup.iss</a>, created inside the system's Windows folder. To specify an alternative response file name and location, use the /f1 option, described below.</p> <p>Basic MSI projects do not create or use a response file for silent installations.</p>

**Table 13** ■ Parameters for Silent Installations (cont.)

Parameter	Project Type	Description
<b>/s</b>	Basic MSI, InstallScript, InstallScript MSI	<p>For an InstallScript MSI or InstallScript project, the command Setup.exe /s runs the installation in silent mode, by default based on the responses contained in a response file called Setup.iss in the same directory. (Response files are created by running Setup.exe with the /r option.) To specify an alternative file name or location of the response file, use the <a href="#">/f1 option</a>.</p> <p>The command Setup.exe /s also suppresses the Setup.exe initialization dialog for a Basic MSI installation, but it does not read a response file. To run a Basic MSI installation silently, use the following command line:</p> <pre>Setup.exe /s /v/qn</pre> <p>To specify the values of public properties for a silent Basic MSI installation, you can use a command such as the following one:</p> <pre>Setup.exe /s /v"/qn INSTALLDIR=D:\Destination"</pre> <div data-bbox="805 949 844 995" data-label="Image"></div> <p><b>Note</b> ■ Using this command-line parameter to launch an installation that includes an InstallShield prerequisite does not automatically run the prerequisite installation silently. You may also need to specify a valid silent command-line parameter for the InstallShield prerequisite in the <b>Specify the command line for the application when the setup is running in silent mode</b> setting on the <a href="#">Application to Run tab</a> in the InstallShield Prerequisite Editor.</p> <p>For more information, see <a href="#">Specifying Command-Line Parameters for an InstallShield Prerequisite</a>.</p>
<b>/f1</b>	InstallScript, InstallScript MSI	<p>Using the /f1 option enables you to specify where the <a href="#">response file</a> is (or where it should be created) and what its name is, as in the following example:</p> <pre>Setup.exe /s /f1"C:\Temp\Setup.iss"</pre> <p>Specify an absolute path; using a relative path gives unpredictable results. The /f1 option is available both when creating a response file (with the /r option) and when using a response file (with the /s option).</p>

**Table 13** ■ Parameters for Silent Installations (cont.)

Parameter	Project Type	Description
<b>/f2</b>	InstallScript, InstallScript MSI	<p>When running an InstallScript MSI or InstallScript installation in silent mode (using the <code>/s</code> option), the log file <b>Setup.log</b> is by default created in the same directory and with the same name (except for the extension) as the response file. The <code>/f2</code> option enables you to specify an alternative log file location and file name, as in the following example:</p> <pre>Setup.exe /s /f2"C:\Setup.log"</pre> <p>Specify an absolute path; using a relative path gives unpredictable results.</p>

Special Installation Modes

Table 14 • Parameters for Special Installation Modes

Parameter	Project Type	Description
/a	Basic MSI, InstallScript MSI	 <b>Note</b> ▪ The /a parameter does not work with Update.exe. Update.exe launches a patch that accesses and modifies an existing cached .msi file on the system, and an administrative installation does not cache the .msi file.  The /a option causes Setup.exe to perform an administrative installation. An administrative installation copies (and uncompresses) your data files to a directory that is specified by the user, but it does not create shortcuts, register COM servers, or create an uninstallation log.
		 <b>Tip</b> ▪ If an installation contains InstallShield prerequisites and you want to extract them from Setup.exe, add a path after the /a parameter to extract the prerequisites to that location. A sample command is Setup.exe /a"C:\temp".
/j	Basic MSI, InstallScript MSI	The /j option causes Setup.exe to perform an advertised installation. An advertised installation creates shortcuts, registers COM servers, and registers file types, but does not install your product's files until the user invokes one of these "entry points."
/x	Basic MSI, InstallScript MSI	The /x option causes Setup.exe to uninstall a previously installed product.

**Table 14** • Parameters for Special Installation Modes (cont.)

Parameter	Project Type	Description
<b>/uninst</b>	InstallScript, InstallScript MSI (if the InstallScript user interface (UI) style is the traditional style, which uses the InstallScript engine as an external UI handler)	<div>  <p><b>Important</b> • This parameter does not apply to InstallScript MSI projects in which the InstallScript UI style is the new style (which uses the InstallScript engine as an embedded UI handler). To learn more, see <a href="#">Using the InstallScript Engine as an External vs. Embedded UI Handler for InstallScript MSI Installations</a>.</p> <p>The /uninst option is provided for compatibility with earlier versions of InstallShield. This option causes the InstallScript engine to execute the event handler function OnUninstall, whose default code uninstalls the previously installed product.</p> </div> <div>  <p><b>Project</b> • Note that in InstallScript MSI installations, the /uninst parameter does not invoke the InstallScript engine uninstall behavior that processes install log and removes any resources that were created and logged through script. However, the /removeonly option does invoke this behavior.</p> </div>
<b>/removeonly</b>	InstallScript, InstallScript MSI	The /removeonly option sets the REMOVEONLY system variable equal to a non-zero value. The default code for the OnMaintUIBefore event handler function conditionally displays the <b>SdWelcomeMaint</b> dialog, depending on the value of REMOVEONLY.

Table 14 • Parameters for Special Installation Modes (cont.)

Parameter	Project Type	Description
<code>/instance=&lt;InstanceId&gt;</code>	Basic MSI	<p>The <code>/instance=&lt;InstanceId&gt;</code> option—which is available for <a href="#">Basic MSI projects that support the installation of multiple instances of a product</a>—lets you specify which instance you want to install, update, or uninstall. <code>&lt;InstanceId&gt;</code> represents the value of the <code>InstanceId</code> property that identifies the instance. Whenever you use this option and include a valid <code>InstanceId</code> value, the installation suppresses the instance selection dialog.</p> <p>For example, the following sample command line installs the instance that has 2 as the value of the <code>InstanceId</code> property:</p> <pre>Setup.exe /instance=2</pre> <p>Use <i>default</i> to identify the instance that is installed by the base installation package, as in the following example:</p> <pre>Setup.exe /instance=default</pre> <p>To specify the instance that you want to uninstall, include the <code>/x</code> option with the <code>/instance=&lt;InstanceId&gt;</code> option.</p> <p>For more information, see <a href="#">Naming an Instance</a> and <a href="#">Run-Time Behavior for Installing Multiple Instances of a Product</a>.</p>

## Passing Data to the Installation

**Table 15** ■ Parameters for Passing Data to the Installation

Parameter	Project Type	Description
<code>/v</code>	Basic MSI, InstallScript MSI	<p>Use the <code>/v</code> option to pass command-line options and values of public properties through to <code>Msiexec.exe</code>.</p> <p>If you want to pass more than one argument to <code>Msiexec.exe</code>, you can use the <code>/v</code> option multiple times at the command line, once for each argument. For example:</p> <pre>Setup.exe /v"/l*v c:\test.log" / v"MYPROPERTY1=value1" /v"/qb"</pre> <p>As an alternative, you can pass multiple arguments through the <code>/v</code> option as in the following example:</p> <pre>Setup.exe /v"/l*v c:\test.log MYPROPERTY1=value1 /qb"</pre> <div>  <p><b>Note</b> ■ If you pass the <code>/v</code> parameter at the command prompt when launching <code>Setup.exe</code>, any parameters that are specified for the <code>CmdLine</code> keyname in <code>Setup.ini</code> are ignored. To learn more, see <a href="#">Setup.ini</a>.</p> </div>
<code>/v"ISSCRIPTCMDLINE=\"&lt;Option1&gt;&lt;Option2&gt;\""</code>	Basic MSI projects that have InstallScript custom actions	<p>This option specifies command-line parameters to be passed to the script. Any property supported by InstallScript MSI (where appropriate) can be specified. (The most common ones are <code>/d</code> and <code>/z</code>.)</p> <p>For example, the following indicates that you want to debug the script, and that the <code>CMDLINE</code> variable should contain <code>TEST</code>.</p> <pre>Setup.exe /v"ISSCRIPTCMDLINE=\"-d -zTEST\""</pre> <p>Note that as shown above, when you want to specify that a double quote character is not a delimiter for the command line but a delimiter for the property, use <code>\"</code>.</p> <p>Note also that as with any public Windows Installer property, this property should be specified with all uppercase letters.</p>

**Table 15** ■ Parameters for Passing Data to the Installation (cont.)

Parameter	Project Type	Description
<b>/z</b>	InstallScript MSI	<p>The <code>/z</code> option is used to pass data to the InstallScript system variable <code>CMDLINE</code>, as in the following example:</p> <pre>Setup.exe /z"My Custom Data"</pre> <p>When this command line is used, the variable <code>CMDLINE</code> contains the string <code>My Custom Data</code>.</p>

## Download and Cache Locations (Basic MSI and InstallScript MSI Projects)

**Table 16** ▪ Parameters for Download and Cache Locations

Parameter	Project Type	Description
<b>/ua</b> <b>/uw</b>	Basic MSI, InstallScript MSI	<p>In the Release Wizard, you can specify download locations for the Windows Installer installers InstMsiA.exe and InstMsiW.exe. A user can specify an alternative URL at run time using the /ua option (for the InstMsiA.exe location) and /uw option (for the InstMsiW.exe location), as in the following example:</p> <pre>Setup.exe /uw"http://www.otherlocation.com/engines"</pre> <p>The file name is not necessary.</p>  <p><b>Note</b> ▪ You must specify the full URL with the parameters.</p>
<b>/um</b>	Basic MSI, InstallScript MSI	<p>In the Release Wizard, for a Web Downloader build, you can specify a <b>download location</b> for your .msi database. A user can specify an alternative URL using the /um option, as in the following example:</p> <pre>Setup.exe /um"http://www.otherlocation.com/packages/product.msi"</pre>  <p><b>Note</b> ▪ You must specify the full URL with the parameter.</p>
<b>/b</b>	Basic MSI, InstallScript MSI	<p>In the Release Wizard, for a Downloader build, you can specify whether to cache the contents of a compressed package on the local system. With the /b option, the user can specify the directory in which to cache the installation files, as in the following example:</p> <pre>Setup.exe /b"C:\CacheDirectory"</pre>  <p><b>Note</b> ▪ You must specify the full URL with the parameter.</p>

Debugging

Table 17 ■ Parameters for Debugging

Parameter	Project Type	Description
/d	Basic MSI projects with InstallScript custom actions, InstallScript, InstallScript MSI	<p>For an InstallScript project, running the command Setup.exe /d runs the installation program with the InstallScript Debugger.</p> <div></div> <p><b>Note</b> ■ Debugging InstallScript code requires the debug-information file Setup.dbg to be available. In addition, in order to debug an installation on a system other than your development machine, you need to copy certain files from your development machine to the debugging machine. To learn more, see <i>Debugging an Installation on Any Computer</i>.</p> <p>For a Basic MSI project, the following command runs your InstallScript custom actions in the InstallScript Debugger:</p> <pre>Setup.exe /v"ISSCRIPTDEBUG=1 ISSCRIPTDEBUGPATH=\"path-to-Setup.dbg\""</pre>

**Table 17** ■ Parameters for Debugging (cont.)

Parameter	Project Type	Description
<b>/debuglog</b>	Basic MSI, InstallScript MSI	<p>The /debuglog parameter lets you generate a log file for Setup.exe.</p> <p>To generate a log named InstallShield.log in the same directory as the Setup.exe file, pass just the command-line parameter. Note that this does not work if the Setup.exe file is in a read-only location. For example:</p> <pre>setup.exe /debuglog</pre> <p>To specify the name and location of the log file, pass the path and name, as in the following example:</p> <pre>Setup.exe /debuglog"C:\PathToLog\setupexe.log"</pre> <p>To generate a log file for the feature prerequisites in the installation, use the /v parameter to set the ISDEBUGLOG property to the full path and file name for the log file, as follows:</p> <pre>Setup.exe /debuglog"C:\PathToSetupLogFile\setup.log" /v"ISDEBUGLOG=prereq.log"</pre> <p>You can use directory properties and environment variables in the path for the feature prerequisite log file.</p> <p>Additionally, use the option /newlog with the /debuglog parameter or set the <b>Always Create Debug Log</b> option to Yes in the IDE setting to overwrite the existing debug log and create the log(s) newly.</p> <p>To overwrite the existing log named InstallShield.log in the same directory as the Setup.exe file, pass just the command-line parameter. For example, setup.exe /debuglog /newlog.</p> <p>To specify the name and location of the existing log file to overwrite, pass the path and name, as in the following example:</p> <pre>setup.exe /debuglog"C:\PathToLog\setupexe.log" /newlog</pre> <div>  <p><b>Note</b> ■ The message “The setup command line is invalid. The Setup cannot proceed” will be shown when /newlog option was not used with /debuglog parameter or the <b>Always Create Debug Log</b> option is not set to Yes.</p> </div>

## SMS Data

**Table 18** - Parameters for SMS Data

Parameter	Project Type	Description
<b>/m</b>	InstallScript, InstallScript MSI	<p>The /m option causes Setup.exe to generate an SMS Management Information Format (.mif) file. Following is a typical command:</p> <pre>Setup.exe /m"SampleApp"</pre> <p>Including the ".mif" file extension is not necessary.</p>
<b>/m1</b>	InstallScript, InstallScript MSI	<p>Using the /m1 parameter (along with /m) enables you to specify a serial number to be written to the .mif file. A typical command is as follows:</p> <pre>Setup.exe /m"SampleApp" /m1"1234-5678"</pre>
<b>/m2</b>	InstallScript, InstallScript MSI	<p>Using the /m2 parameter (along with /m) enables you to specify a locale string to be written to the .mif file. A typical command is as follows:</p> <pre>Setup.exe /m"SampleApp" /m2"ENU"</pre>

## Minimum UI

**Table 19** - Parameters for Minimum UI

Parameter	Project Type	Description
<b>/passive</b>	Advanced UI, Suite/ Advanced UI	<p>Use the /passive parameter to runs a suite installer setup in a minimum UI mode (just displaying a progress panel):</p> <pre>Setup.exe /passive</pre> <p>To uninstall using a minimum UI mode, use the following command:</p> <pre>Setup.exe /passive /remove</pre>

## Miscellaneous

**Table 20** ■ Parameters for Miscellaneous

Parameter	Project Type	Description
<b>/delayedstart:&lt;number of seconds&gt;</b>	InstallScript	<p>Specifies the amount of time (in seconds) by which initialization of the installation is delayed after Setup.exe is launched.</p>  <p><b>Note</b> ■ Using the <i>-delayedstart</i> option is recommended when manually launching an additional installation after reboot (for example, by using the <i>RunOnce</i> key). The delay allows the operation system to initialize completely; this prevents the problems—such as Remote Procedure Call (RPC) errors—that can occur if an installation initializes before the operating system has initialized completely. The recommended delay length is 30 seconds.</p> <p>Note that this option is not needed when the installation starts automatically after reboot (for example, due to a call to <b>SdFinishReboot</b> before reboot).</p>
<b>/runfromtemp</b>	Basic MSI, InstallScript, InstallScript MSI	<p>This parameter allows the setup author to always clone the setup and run it from the temporary directory, even if the setup does not meet the conditions for running from the temporary directory. This parameter is ignored if the setup is a self-extracting executable file (.exe).</p>
<b>/Clone_wait</b>	InstallScript, Basic MSI, InstallScript MSI, Suite/Advanced UI	<p>This parameter indicates that the original setup should wait for the cloned setup process to complete before exiting.</p> <p>By default, the original setup is enabled to wait for the completion of the installation process.</p> <p>For more information on <i>Clone_wait</i>, see <a href="#">Changing the Default Clone_wait Parameter for the Setup</a>.</p>
<b>/extract_all:&lt;path&gt;</b>	InstallScript	<p>Specifies that a self-extracting package's files should not be run but simply extracted to the location that is specified by &lt;path&gt;.</p>

**Table 20** ■ Parameters for Miscellaneous (cont.)

Parameter	Project Type	Description
/h	Basic MSI, InstallScript MSI	The build engine automatically creates an installation that supports Setup.exe cloning in cases where cloning is required (for example, multi-disk installations). If you need to do this manually, pass /h to Setup.exe and it will clone itself to a temporary location and run from that location.

**Table 20** ■ Parameters for Miscellaneous (cont.)

Parameter	Project Type	Description
<b>/hide_progress</b>	Basic MSI, InstallScript, InstallScript MSI	<p>Suppresses the display of any small and standard progress dialogs that might be shown during initialization.</p> <p>The small progress dialog is usually used for installations that display a splash screen during initialization, since a standard-size progress dialog does not leave any space for the splash screen. Specifying the /hide_progress option hides the small progress dialog for those installations, so end users would see just the splash screen without any progress indication.</p> <p></p> <p><b>Note</b> ■ For InstallScript installations: If you specify /hide_progress and include a splash screen in your InstallScript installation, the length of time that the splash screen is displayed depends on whether <b>SmallProgress=Y</b> or <b>SmallProgress=N</b> is specified in Setup.ini.</p> <ul style="list-style-type: none"> <li>• If <b>SmallProgress=Y</b> is specified, the splash screen is shown for as long as the progress dialog would have been displayed if /hide_progress was not specified.</li> <li>• If <b>SmallProgress=N</b> is specified, the splash screen is shown for the length of time specified in the <b>SplashTime</b> key; thus, using /hide_progress and <b>SmallProgress=Y</b> at the same time is not recommended.</li> </ul> <p>For InstallScript MSI installations: If you include a splash screen, the installation automatically switches to the small progress dialog, and the splash screen is shown only during the time that the progress dialog is displayed. Note that this is true even if /hide_progress is specified. Therefore, it is recommended that you avoid using /hide_progress with a splash screen in InstallScript MSI installations.</p>
<b>/hide_splash</b>	InstallScript, InstallScript MSI	<p>Suppresses the display of the splash screen if one is included.</p>

**Table 20** ■ Parameters for Miscellaneous (cont.)

Parameter	Project Type	Description
<b>/hide_usd</b>	InstallScript	Suppresses display of the dialog that is displayed by an update-enabled installation to let the end user select which instance of your product will be updated. This dialog is displayed by default when an update-enabled installation detects multiple previous instances. When this command-line option is used and an update-enabled installation detects multiple previous instances, the installation creates a new instance.
<b>/ig{InstanceGUID}</b>	InstallScript	Specifies the value of the system variable INSTANCE_GUID; for example, -ig{722C7440-B317-4B3B-AECA-0199EA4E7CDB}. If this option is not used, the installation automatically assigns a value to INSTANCE_GUID (for multi-instance installations, this value is a newly generated GUID; for standard installations, this value is the same as the value of PRODUCT_GUID). This option is useful if you have created an installation launcher—that is, a custom application that runs before your installation does to perform pre-setup tasks, such as determining the instance GUID that you want to use for the installation. Do not specify anything other than a valid GUID with this option.
<b>/installfromweb"PathToDisk1Files"</b>	InstallScript	This option is similar to the media_path option except that this option forces the installation to behave like a launched One-Click Install installation, even if the path to the media files is not a URL. Use this option if you are launching the installation from a Web page manually. In addition, this option is added automatically if the built-in Setup.ocx file is used to launch the installation.

**Table 20** ■ Parameters for Miscellaneous (cont.)

Parameter	Project Type	Description
<code>/media_path"PathToDisk1Files"</code>	InstallScript	This option indicates that the installation should look for the Disk1 files in the location that is specified. Note that only the Setup.exe file needs to be in the original launch location; the installation obtains all other required files from the specified location (including Setup.exe, which must be present in the media location). You can specify a URL as the path to the media files; in this case, the installation behaves like a launched One-Click Install installation, which always shows the security dialog. To learn more about the behavior of One-Click Install installations, see <a href="#">One-Click Install Installations in InstallScript Projects</a> .
<code>/L&lt;LanguageID&gt;</code>	Basic MSI, InstallScript, InstallScript MSI	<p>This option indicates that the installation should run in the specified language as specified. You can specify the language ID as either a hexadecimal or decimal number. If you specify the hexadecimal number, be sure to precede the value with <code>0x</code>. For example, the following commands indicate that the installation should be run in German:</p> <pre>Setup.exe -L0x0407 Setup.exe -L1031</pre> <p>Note that if you specify a language ID that is not supported by the installation or you specify an invalid language ID, the parameter is ignored. Also note that if this parameter is specified and it is valid, the language dialog (if enabled) is automatically suppressed.</p>
<code>/w</code>	Basic MSI, InstallScript MSI	<p>For a Basic MSI project, the <code>/w</code> option forces Setup.exe to wait until the installation is complete before exiting.</p> <div>  <p><b>Note</b> ■ If you are using the <code>/w</code> option in a batch file, you may want to precede the entire Setup.exe command-line option with <code>start /WAIT</code>. A properly formatted example of this usage is as follows:</p> <pre>start /WAIT setup.exe /w</pre> </div>

**Table 20** ■ Parameters for Miscellaneous (cont.)

Parameter	Project Type	Description
<b>/SMS</b>	InstallScript MSI	For an InstallScript MSI project, Setup.exe automatically waits for the installation to finish before exiting, so this option (used by earlier versions of InstallShield Professional) is no longer necessary.

## User-Defined Command-Line Parameters

**Project** ■ This information about user-defined command-line parameters applies to InstallScript projects.

For user-defined command-line parameters in InstallScript MSI projects, use the `-z` command-line parameter that is described above.

Along with the command-line parameters that are listed above, `-bd`, `-f`, and `-zi` are command-line parameters that are reserved for use in InstallScript projects. User redefinition of these command-line parameters, either uppercase or lowercase, can cause errors.

You can define your own command-line arguments, which are copied to the system variable `CMDLINE` as at run time. Like predefined command-line parameters, you can pass custom arguments directly to Setup.exe, place them in Setup.ini, or (for testing purposes while you are using the InstallShield IDE) place them in the Settings dialog box, which is displayed when you click Settings on the Build menu in InstallShield.

**Note** ■ Setup.exe initializes correctly even on systems with more than 256 MB of memory and always stays in memory until the setup is complete. Due to the nature of DOS, when you launch Setup.exe from the command line, a DOS prompt is quickly returned although Setup.exe is still in memory.

## Advanced UI and Suite/Advanced UI Setup.exe Command-Line Parameters

**Project** ■ This information applies to the following project types:

- Advanced UI
- Suite/Advanced UI

**Edition** ■ The Advanced UI project type is available in the InstallShield. The Suite/Advanced UI project type is available in the Premier edition of InstallShield. For information about the differences between these two project types, see [Advanced UI Projects vs. Suite/Advanced UI Projects](#).

The Setup.exe setup launcher for Advanced UI and Suite/Advanced UI installations can accept a number of command-line parameters. Note that passing undefined parameters or invalid property definitions results in an invalid command-line error.

**Table 21** ▪ Parameters for Advanced UI and Suite/Advanced UI Setup Launchers

Parameter	Description
<b>/d</b> <b>/d"PathTo.dbgFile"</b>	<p>The /d parameter lets you debug the InstallScript actions in your Suite/Advanced UI installation with the InstallScript Debugger.</p>  <p><b>Note</b> ▪ <i>Debugging InstallScript code requires the debug-information file Setup.dbg to be available. In addition, in order to debug an installation on a system other than your development machine, you need to copy certain files from your development machine to the debugging machine. To learn more, see <a href="#">Debugging an Installation on Any Computer</a>.</i></p> <p>The following command runs your InstallScript custom actions in the InstallScript Debugger:</p> <pre>Setup.exe /d</pre> <p>If the installation is located in a path at which they were originally compiled, you also need to specify the path to your debug symbols file (.dbg):</p> <pre>Setup.exe /d"Path-to-Setup.dbg"</pre> <p>For more information about InstallScript actions in Suite/Advanced UI projects, see <a href="#">Working with an Action that Runs InstallScript Code in a Suite/Advanced UI Installation</a>.</p> <p>For more information on debugging issues, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>/debuglog</b> <b>/debuglog"PathToLog"</b>	<p>The /debuglog parameter lets you generate a log file for Setup.exe.</p> <p>To generate a log named InstallShield.log in the same directory as the Setup.exe file, pass just the command-line parameter. Note that this does not work if the Setup.exe file is in a read-only location. For example:</p> <pre>Setup.exe /debuglog</pre> <p>To specify the name and location of the log file, pass the path and name, as in the following example:</p> <pre>Setup.exe /debuglog"C:\PathToLog\setupexe.log"</pre> <p>For more information, see <a href="#">Troubleshooting Issues with an Advanced UI or Suite/Advanced UI Installation</a>.</p>

**Table 21** ■ Parameters for Advanced UI and Suite/Advanced UI Setup Launchers (cont.)

Parameter	Description
<b>/language:LCID</b>	<p>The <code>/language</code> parameter indicates that the installation should run in the specified language as specified. Specify the language ID as a decimal number. For example, to indicate that the installation should be run in German, pass the language ID as follows:</p> <pre>Setup.exe /language:1031</pre> <p>Note that if you specify a language ID that is not supported by the installation or you specify an invalid language ID, the parameter is ignored. Also note that if this parameter is specified and it is valid, the language wizard page (if enabled) is automatically suppressed.</p>
<b>/log</b> <b>/log"PathToPackageLog"</b> <b>/log:"PathToPackageLog"</b>	<p>The <code>/log</code> parameter lets you generate a log file for each package in the Advanced UI or Suite/Advanced UI installation for which logging is enabled.</p> <p>To generate package log files in a particular folder, pass the folder path with the <code>/log</code> parameter to the Advanced UI or Suite/Advanced UI Setup.exe file. You can optionally separate the <code>/log</code> parameter and the path with a colon. For example, both of the following command lines generate a log file in the PathToLogFiles folder:</p> <pre>Setup.exe /log"C:\PathToLogFiles"</pre> <pre>Setup.exe /log:"C:\PathToLogFiles"</pre> <p>Note that the path to the log file location must already exist.</p> <p>To generate package log files in the %TEMP% directory, leave out the path. For example:</p> <pre>Setup.exe /log</pre> <p>Note that logging must be enabled for a package, and the package's logging-related settings (which vary, depending on whether the package is an .msi package, an .msp package, some other type of package) must be configured in the Packages view. For more information, see <a href="#">Supporting the Creation of Package Log Files for Command-Line Launching of an Advanced UI or Suite/Advanced UI Installation</a>.</p>
<b>/password:MyPassword</b>	<p>If you configured the password-related settings for your release on the <a href="#">Setup.exe tab in the Releases view</a>, the end user must specify the password with the <code>/password</code> parameter at run time during a silent installation. A typical command is as follows:</p> <pre>Setup.exe /silent /password:MyPassword</pre>

**Table 21** • Parameters for Advanced UI and Suite/Advanced UI Setup Launchers (cont.)

Parameter	Description
<b>PropertyName=Value</b> <b>/PropertyName=Value</b> <b>PropertyName=</b>	<p>You can pass properties to the Advanced UI or Suite/Advanced UI installation in more than one way. Following are examples:</p> <p>Setup.exe MyPropertyName=MyPropertyValue</p> <p>Setup.exe /MyPropertyName:MyPropertyValue</p> <p>To clear the value of a property, even if it is set by the Advanced UI or Suite/Advanced UI Setup.xml file, use the following syntax:</p> <p>Setup.exe MyPropertyName=</p> <p>The following properties have special meaning to the Advanced UI or Suite/Advanced UI installation when they are passed on the command line:</p> <ul style="list-style-type: none"> <li>● <b>ISFeatureInstall</b>—This property provides a comma-delimited list of feature names that are to be installed with the current installation operation. It is intended for a silent first-time installation.</li> <li>● <b>ISFeatureRemove</b>—This property provides a comma-delimited list of feature names that are to be removed with the current installation operation. It is intended for maintenance installations.</li> </ul> <p>For more information, see <a href="#">Advanced UI and Suite/Advanced UI Property Reference</a>.</p>
<b>/remove</b>	The /remove parameter uninstalls the packages that are currently installed on the target system and that were installed by the Advanced UI or Suite/Advanced UI installation. This option also removes the Advanced UI or Suite/Advanced UI installation's entry in Add or Remove Programs if the maintenance condition in the Advanced UI or Suite/Advanced UI Setup.xml file is false.
<b>/repair</b>	The /repair parameter repairs the packages that are currently on the target system and that were installed by the Advanced UI or Suite/Advanced UI installation.
<b>/silent</b>	The /silent parameter runs the installation without a user interface.

**Table 21** ■ Parameters for Advanced UI and Suite/Advanced UI Setup Launchers (cont.)

Parameter	Description
<b>/stage_only</b>	<p>The <code>/stage_only</code> parameter runs the staging part of the Advanced UI or Suite/Advanced UI installation, in which the Advanced UI or Suite/Advanced UI installation copies its packages to a directory that is specified by the user on the BrowseStageFolder wizard page.</p> <p>If any of the packages are compressed into the Advanced UI or Suite/Advanced UI Setup.exe file, the <code>/stage_only</code> option also extracts the packages from the Setup.exe file before copying them to the staging directory.</p> <p>In addition, if any of the packages are located on the Web, the <code>/stage_only</code> option downloads the packages and adds them to the staging directory.</p> <p>Note that this option does not run the packages in the Advanced UI or Suite/Advanced UI installation. Furthermore, it does not uncompress any of the packages. Thus, if you are creating a patch for an Advanced UI or Suite/Advanced UI installation and you need to generate an uncompressed .msi package for a package in your Advanced UI or Suite/Advanced UI installation, for example, use the stage-only option. Then perform an administrative installation for the .msi package.</p> <div data-bbox="626 940 670 989" data-label="Image"></div> <p><b>Tip</b> ■ The <code>ISRootStagePath</code> property stores the path to the folder that contains the copied files. To specify a default value for this property, set this property from the command line while passing the <code>/stage_only</code> parameter, as shown in the following example:</p> <pre>Setup.exe /stage_only ISRootStagePath="C:\MyStagingArea"</pre>
<b>/SuiteGUID</b>	<p>The <code>/SuiteGUID</code> parameter retrieves the Suite GUID from Setup.exe and the GUID saves into SuiteGUID.log file under Setup.exe location.</p>

For information on how to specify command lines that you want an Advanced UI or Suite/Advanced UI installation to use when launching one of its packages, see [Passing Command-Line Parameters to a Package in an Advanced UI or Suite/Advanced UI Installation](#).

## Setup.exe (InstallScript Projects)

Setup.exe is the main installation executable file; it performs installation initialization and launches the installation engine to execute the installation on the target system.

When you create and build a release, Setup.exe and other setup engine redistributable files are placed in the Disk1 folder. You must ship these files on Disk1 of your distribution media.

**Note** ■ You can rename Setup.exe to any valid file name, such as `Install.exe`. Note that for the installation to be launched by another installation using the `DoInstall` function, the launched installation's Setup.ini file must have the new file name in the `[Startup]` section's `LauncherName` key.

You can pass command-line options directly to Setup.exe, or you can place them in Setup.ini. For testing purposes, while you are using InstallShield, you can pass command-line options to Setup.exe through the Run/Debug tab of the Settings dialog box, which is displayed when you click Settings on the Build menu.

---

**Note** ▪ *A self-extracting executable file accepts any command-line parameter that Setup.exe accepts.*

For a list of supported parameters, see [Setup.exe and Update.exe Command-Line Parameters](#).

# Frequently Asked Questions

This section lists common questions (sorted by topic) and provides links to answers. Where the techniques or steps to perform a specific task are different in different project types, answers for each project type are displayed.

## Project Types

- [Which project type should I use?](#)
- [How do I convert my project to a different project type?](#)
  - [Why do I get “error C8025 ‘INSTALLDIR’: undefined identifier” when compiling my script after conversion?](#)
  - [Why do I get the following error: “String PRODUCT\\_NAME was not found in string table”?](#)

## Files and Folders

- [What is the difference between INSTALLDIR and TARGETDIR?](#)
- [How does Windows Installer determine whether to overwrite an existing file?](#)
- [How do I register a COM server?](#)
- [How do I install, start, stop, delete, uninstall, or configure a Windows service?](#)
- [How do I create an empty folder?](#)
- [How do I set a key file for a dynamic file link?](#)
- [What happens if I put more than one executable file in the same component?](#)

## Features and Components

- [How do I conditionally select a feature?](#)
- [How do I conditionally hide a feature?](#)
- [Why should I use uppercase directory identifiers when setting component destinations?](#)

- [How do I change the value in the Link To column for a component?](#)

## Redistributables

- [How do I add the Windows Installer to my project?](#)
- [How do I add the .NET Framework to my project?](#)

## Shortcuts

- [How do I create an Internet shortcut?](#)
- [How do I create a shortcut to a folder?](#)

## Registry

- [How do I read data from the registry?](#)
- [How do I write a property's value to the registry?](#)

## InstallScript

- [How do I find out what sort of built-in functions are available in the InstallScript language?](#)
- [What is the maximum number of statements that I can use in a compiled script file? What other limits exist for InstallScript?](#)

## INI Files

- [How do I read data from an .ini file?](#)
- [How do I get all key names from an .ini file?](#)

## Properties

- [How do I get or set a Windows Installer property in InstallScript?](#)
- [Why does my deferred custom action show a blank value for a Windows Installer property?](#)

## Conditions

- [How do I detect administrator privileges?](#)
- [How do I detect a first-time installation?](#)
- [How do I call a function only during the installation sequence?](#)
- [How do I detect if the user has selected a specific feature?](#)
- [How do I detect if the user is running a particular operating system?](#)

## End-User Interface

- [How do I populate a list box at run time?](#)
- [How do I display a file browse dialog?](#)
- [How do I display a network browse dialog?](#)

## Custom Actions

- How do I search for a file on the end user's system?
- How do I launch my application after the installation is complete?
- How do I place a file in the .msi database and extract it during run time?
- How do I exit the installation from within a custom action?
- How can I use the INSTALLDIR variable after I have created a custom action that runs VBScript code?
- How can I change ODBC properties (like DBQ and SystemDB) through script?

## SQL Scripts

- How do I override the default SQL run-time behavior?
- How can I control the execution of a SQL script based on certain conditions in an InstallScript project?
- How do I enforce a server-side installation in an InstallScript project?
- How do I enforce a SQL server-side installation in a Windows Installer-based project?
- How do I handle SQL run-time errors?
- How do I ensure that my SQL scripts run only against a full of SQL Server?

## Building Releases

- How do I build my release from the command line?
- How do I change project settings from the command line?

## Deployment

- How do users run my installation in silent mode?

## Uninstallation

- How do I remove files that were created by my product?
- How do I remove registry data created by my product?

Answers to many other questions are available in the [Knowledge Base](#).

# Glossary

**Table 1** • InstallShield Glossary

Term	Definition
<b>.bin file</b>	A binary file that is executable on UNIX platforms. Application files usually have a .bin extension.
<b>.bmp file</b>	A bitmap file of an image represented as an array of bits. In bitmap graphics, an image is displayed on the screen as a collection of tiny squares called pixels, which together form a pattern. Each pixel in the image corresponds with one or more bits.
<b>.cab file</b>	See <a href="#">cabinet file</a> .
<b>.command file</b>	A command file that is executable on Mac OS X platforms. Application files usually have a .command extension.
<b>.cub file</b>	A validation module that stores and provides access to custom actions for internal consistency evaluators (ICEs). See also <a href="#">custom action</a> and <a href="#">internal consistency evaluator</a> .
<b>.exe file</b>	An executable binary file on Windows platforms. Application files usually have an .exe file extension.
<b>.gif file</b>	A graphics interchange format file supported on the Web. This type of file is in a bit-mapped graphics file format used for displaying bitmap images. These files use lossless compression, a method of compression in which no data is lost. This type of file supports up to 256 colors; it also supports transparency, where the background color can be set to transparent to let the color on the underlying page show through. This type of file format is more suitable than the .jpg file format for images with only a few distinct colors, such as line drawings.

Table 1 • InstallShield Glossary

Term	Definition
<b>.idt file</b>	An exported Windows Installer database table.
<b>.ism file</b>	The working file that InstallShield uses to store project information. When you build a release, InstallShield uses the .ism file to create an .msi file for distribution.
<b>.jar file</b>	A Java archive file that contains the classes, images, and sound files for an installation, zipped up into a single file.
<b>.jpg file</b>	Also known as JPEG, which is the abbreviation for Joint Photographic Experts Group, the original name of the committee that wrote the standard. This type of file is one of the image file formats supported on the Web. The file uses lossy compression, a type of compression in which color and grayscale continuous-tone images are compressed and some data is lost to eliminate redundant or unnecessary information. These images support 16 million colors and are best suited for photographs and complex graphics.
<b>.mif file</b>	A management information format file used to describe a hardware or software component.
<b>.msi file</b>	The Windows Installer installation package in its finished state. It includes installation resource files and can have compressed within it all of the application's data files. The .msi file is the one that is distributed to the end users and will interact with the Windows Installer service to install your application on their machines.
<b>.msm file</b>	The database file of a merge module. This type of file contains all of the installation properties and installation logic for the module. See also <a href="#">merge module</a> .
<b>.msp file</b>	A Windows Installer patch file. This type of file consists of a summary information stream, transform substorages, and cabinet files. An .msp file contains at least one database transform that adds patching information to the database of its target installation package. The installer uses this patching information to apply the patch files that are stored in the cabinet files.
<b>.mst file</b>	A transform package. This type of file is a simplified Windows Installer database that contains the differences between two .msi databases. Transforms enable administrators to apply modified settings to a database when they are deploying an installation package. See also <a href="#">transform</a> .
<b>.NET</b>	An operating system platform that Microsoft created for connecting information, people, systems, and devices. The .NET environment enables developers to build, create, and deploy their applications and Web services using whatever languages they prefer via the common language run time.

Table 1 • InstallShield Glossary

Term	Definition
<b>.NET Compact Framework</b>	A scaled-down version of the .NET Framework designed to run on resource-constrained devices, such as mobile devices. The .NET Compact Framework is currently available only for Pocket PC and Windows CE .NET devices, with support for more devices forthcoming.
<b>.NET Framework</b>	A programming infrastructure that Microsoft created for building, deploying, and running applications and services that use .NET technologies such as Web services. The .NET Framework consists of three main parts: the common language run time, a hierarchical set of unified class libraries, and a componentized version of Active Server Pages called ASP.NET.
<b>.ocx file</b>	An object linking and embedding (OLE) custom control file. This type of file is a cross-platform COM file that is called by an application to perform a function, such as the ability to resize windows.
<b>.p12 file</b>	A certificate file that conforms to public-key cryptography standard (PKCS) number 12, which specifies a portable format for securely storing or transporting a user's private keys, certificates, miscellaneous secrets, and other information.
<b>.pcp file</b>	A Windows Installer patch creation properties file.
<b>.prq file</b>	A prerequisite file that contains information about a base application or component that must be installed on the target machine before the main application can be installed. Including setup prerequisites in installation projects enables developers to chain multiple installer files together into a single executable file.
<b>.reg file</b>	See <a href="#">registry file</a> .
<b>.scm file</b>	A ScreenCam movie file.
<b>.wmf file</b>	A Windows metafile format file. This type of graphics file is used to exchange graphics information between Microsoft Windows-based applications.
<b>absolute path</b>	An absolute path includes all of the information necessary to locate a file by starting at the root directory of a specified drive. For example, C:\Program Files\InstallShield is the absolute path to the InstallShield folder when it is installed on drive C.
<b>accessibility</b>	The capacity or tendency to be available to all people, including those with disabilities.
<b>acquisition phase</b>	The phase of the installation process during which the installer queries the database for instructions. The acquisition phase is followed by the execution phase.

**Table 1** - InstallShield Glossary

Term	Definition
<b>action</b>	A command that performs an operation at a particular point during the execution of an installation or uninstallation wizard. Developers of installation packages can use built-in standard actions and create their own custom actions. Actions may display progress to the end user or allow the end user to cancel the operation.
<b>active directory</b>	A structure supported by Microsoft Windows 2000 that enables administrators to track and locate any object on a network. Active Directory is the directory service used in Windows 2000 Server for distributed computing environments.
<b>active template library (ATL)</b>	A set of classes for writing COM controls, resulting in smaller binaries than, for example, MFC.
<b>ActiveX</b>	A set of object-oriented programming technologies and tools. ActiveX enables developers to write applications so that other applications and the operating system can call them. ActiveX technology makes it possible to create interactive Web pages that look and behave like applications, rather than static pages.
<b>administration</b>	The act or process of managing something.
<b>administration sequence</b>	The list of actions that are executed when a user launches your installation with the / a command-line option. This is useful for network administrators who want to provide a common installation point on the network and prepare different installation criteria for multiple users. Each Administration sequence consists of a User Interface sequence and an Execute sequence.
<b>administrative installation</b>	Copies and uncompresses your data files to a directory specified by the user, but does not create shortcuts, register COM servers, or create an uninstallation log.
<b>administrative privileges</b>	The highest level of permission that can be granted to a computer user. Levels of permissions are necessary in networked environments to ensure system security and prevent damage to computer hardware and software. A user with administrative privileges can perform tasks such as install and uninstall software and change a computer's configurations. Administrative privileges usually pertain to Windows NT 4.0, 2000, or XP machines as opposed to Windows 95, 98, or ME machines.
<b>advertised shortcut</b>	A shortcut to a product or feature that is not installed until the first time that the end user launches the shortcut. At run time of an installation, if the end user selects the "This feature will be installed when required" option for the product or the feature containing the shortcut, the shortcut is created but the component's files are not installed until the end user launches the shortcut. The first time the shortcut is launched, the Windows Installer service installs the component's files and other data and then the shortcut launches the target file. Every time the shortcut is used from then on, it behaves like a normal shortcut.

Table 1 • InstallShield Glossary

Term	Definition
<b>advertisement</b>	A type of “just-in-time” installation in which features are not installed immediately during the installation process. Instead, they are installed on the fly when they are requested. When you enable feature advertisement, the feature is advertised, regardless of the mode in which the installation is running, as long as no other factors prevent it from being advertised. If you launch MsiExec.exe from the command line with the /jm option, the feature is advertised to the end user’s machine. If you use the /ju function, the feature is advertised to the current end user. In the Custom Setup dialog, the end user can control which features are immediately installed and which are available later. The two types of advertising are assigning and publishing. See also <a href="#">assigning</a> ; <a href="#">publishing</a> .
<b>advertisement sequence</b>	The advertisement sequence contains the list of actions that are executed when a user launches your installation with the /j command-line option. Validation rule ICE78 requires the advertisement user interface sequence to be empty.
<b>advertising</b>	The process of presenting to end users features that are not installed immediately during the installation process. Instead, these features are installed on the fly when they are requested. See also <a href="#">advertisement</a> .
<b>AlwaysInstallElevated</b>	A user policy that can be configured for Windows platforms under the following registry keys: HKEY_LOCAL_MACHINE\Software\Polices\Microsoft\Windows\Installer and HKEY_CURRENT_USER\Software\Polices\Microsoft\Windows\Installer. To install a package with elevated (system) privileges, set the AlwaysInstallElevated value under both of these registry keys to 1.
<b>American Standard Code for Information Interchange (ASCII)</b>	The code that represents letters, numbers, punctuation marks, and other characters such as numbers, with each character assigned a value between 0 to 127. This code enables different types of computers and computer applications to exchange data.
<b>animation</b>	Multiple graphic images that are alternately changed and displayed at a specified number of frames per second to produce the illusion of movement.
<b>API</b>	See <a href="#">application programming interface</a> .
<b>app paths</b>	The registry key that Windows uses to find your application and its .dll files if their locations are not already in the system’s path. App paths entries can be set through the component’s advanced settings.
<b>application programming interface (API)</b>	A set of routines that an application uses to communicate with the computer’s operating system and that the operating system uses to make services available to the application.
<b>ASCII</b>	See <a href="#">American Standard Code for Information Interchange</a> .

**Table 1** - InstallShield Glossary

Term	Definition
<b>assigning</b>	A type of advertisement. If an administrator assigns an application to a machine, the installation program automatically runs the next time that the machine starts or restarts. If the administrator assigns an application to a user, the installation program places a shortcut on the Start menu of the user's machine. When the user selects the shortcut or launches a document associated with the assigned application, the application is installed.
<b>asynchronous execution</b>	A custom action that independently continues with the execution of its thread while the installer executes the main installation.
<b>ATL</b>	See <a href="#">active template library</a> .
<b>autonomic computing</b>	A self-managed computing model named after, and patterned on, the human body's autonomic nervous system. An autonomic computing system would control the functioning of computer applications and systems without input from users, similar to the way that the human body's autonomic nervous system regulates and protects the body.
<b>auto-repair</b>	The automatic restoring of an application to its original state by the installer. A partial or complete application reinstallation might be required if any files associated with any feature are missing or corrupted.
<b>basic UI</b>	One level of the installer's internal user interface (UI) capabilities. Typically, installation packages that are built with the basic UI level display built-in modeless dialog that show progress messages and disc prompt messages. They do not display any authored dialogs.
<b>billboards</b>	Images, such as marketing messages, that can be displayed during installation.
<b>Binary table</b>	A table that holds the binary data for items such as bitmaps and icons. It also contains data for custom actions.
<b>bitmap</b>	A representation of an image presented as an array of bits. In bitmap graphics, an image is displayed on the screen as a collection of tiny squares called pixels, which together form a pattern. Each pixel in the image corresponds with one or more bits.
<b>cabinet file</b>	A single file that holds a number of compressed files. During installation of an application, the compressed files are decompressed and copied to your computer. Cabinet files are efficient because they save space and time when distributing software. A cabinet file usually has the file extension <code>.cab</code> . Missing or corrupt files may prevent installations from completing. It may be necessary to replace missing or corrupt operating system files or InstallShield files by extracting them from a cabinet file.

**Table 1** • InstallShield Glossary

Term	Definition
<b>cache</b>	A cache (pronounced <i>cash</i> ) is a temporary storage area for frequently accessed data. The purpose of caching is to store frequently used information in a location that is easy to access, resulting in a faster-running computer. There are two types of cache: memory cache and disc cache. Memory cache stores the data and the address of where the data is stored in main memory. Memory caching is useful because most applications access the same data repeatedly. Disc caching uses the main memory. It is used to hold information that has recently been requested from the hard disc or has previously been written to the hard disc. In general, installations usually use the disc cache. When data is read from or written to main memory, a copy is also saved in the memory cache. When data is called for, the computer first checks the memory cache, then the disc cache, and finally main memory.
<b>caption</b>	A text heading in a window. The windows caption is what users click and drag to position the active window on the screen.
<b>CBT</b>	See <a href="#">computer-based training</a> .
<b>CD</b>	See <a href="#">compact disc</a> .
<b>CD browser</b>	A graphical user interface that is launched when a CD is inserted in the drive. It is used to launch one or more applications on the CD.
<b>CD-ROM</b>	See <a href="#">compact disc read-only memory</a> .
<b>checksum</b>	A calculated figure that is applied to data to test for possible corruption. The checksum is derived by sequentially combining bytes of data in the file in a systematic manner. After transmission or storage compression, the checksum calculation is performed again and the result is compared with the previous outcome. If the numbers do not match, this indicates that there is likely an error in the stored or transmitted data.
<b>column</b>	A vertical set of information.
<b>COM</b>	See <a href="#">component object model</a> .
<b>COM file</b>	Binary software components containing reusable code that can be shared across products. A popular example of a COM file is a Microsoft Excel spreadsheet when it is embedded in a Word document. In this example, Excel acts as the COM server and Word acts as the client.
<b>COM server</b>	An executable file that exposes objects to other applications according to the Component Object Model (COM) specification. The types of objects exposed by a COM server may include ActiveX controls, ActiveX documents, Automation objects, or MTS components.

Table 1 • InstallShield Glossary

Term	Definition
<b>COM+ file</b>	An extended COM file. With regard to installations, COM+ adds greater support for building distributed components. For example, you can create appID keys and values in the registry and thereby configure various COM components to run remotely or with special privileges.
<b>command</b>	<p>(1) An instruction given to a computer.</p> <p>(2) An instruction that the operating system executes from the command line or a Command Prompt window to perform a specific task. If errors occur during installation, you may, for example, need to execute commands to run utilities, search your computer's directories, or delete files.</p>
<b>command line</b>	The area of the Command Prompt window in which commands are typed. A command line is used to pass commands to executable files (for example, .exe, .bin).
<b>command prompt window</b>	The Command Prompt window is the interface to MS-DOS. To access the Command Prompt window, click Run on the Start menu, and then type <b>command.com</b> in Windows 95, 98, and ME or <b>cmd.exe</b> in Windows NT, 2000, or XP. If errors occur during installation, you may need to open the Command Prompt window to enter commands to run utilities or search your computer's directories, for example.
<b>command-line option</b>	A command-line option is an argument to a command that changes how the command is executed. See also <a href="#">command</a> .
<b>commit execution</b>	Execution of a Windows Installer action upon completion of the InstallFinalize action, which occurs when the installation has completed transferring files, registering COM servers, and creating shortcuts and registry entries.
<b>committing databases</b>	Accumulated changes made in a Windows Installer database. The changes are not reflected in the actual database until the database is committed, that is, until <b>MsiDatabaseCommit</b> is called.
<b>compact disc (CD)</b>	A disc used for electronically recording, storing, and playing back audio, video, and other information in digital form.
<b>compact disc read-only memory (CD-ROM)</b>	A type of compact disc that is only readable.
<b>component</b>	Elements of the application from the installation developer's perspective. Components are not visible to the end user. When the end user selects a feature for installation, the installer determines which components are associated with that feature, and then those components are installed. Components of an application would contain, for example, the executable binary files, data files, shortcuts, help system files, and registry entries.

Table 1 • InstallShield Glossary

Term	Definition
<b>component object model (COM)</b>	A Microsoft-developed software architecture that enables the creation of component-based applications. Component-based applications allow other components and other applications to use their features, adding functionality to these programs.
<b>compress</b>	Take one or more files and create a new file whose size is less than the total size of the original file(s) and from which the original file(s) can be re-created.
<b>computer-based training (CBT)</b>	Any instruction delivered by computer. CBTs often use graphics, sound, animation, and interaction to train people.
<b>condition</b>	A statement of logic that compares the value of a property to a fixed value or determines whether the property is defined. The condition must evaluate to true if the object, feature, component, action, or other item associated with the condition is to be installed or performed.
<b>conditional installation</b>	Installation of certain items only if certain conditions are met. For example, if an operating system condition is associated with the installation of an application, the application is installed on a target machine only if that target machine is running the specified operating system.
<b>consume</b>	What an installation does to a redistributable package such as a merge module or InstallShield object.
<b>context menu</b>	A context menu, also known as a right-click menu or a pop-up menu, opens when a user right-clicks an item on the desktop, in Windows Explorer, or in an application.
<b>converted project</b>	(1) A file that has been transformed from one type of file to another.  (2) The Open MSI/MSM Wizard in InstallShield is a tool that converts .msi files and merge module (.msm) files to InstallShield installation projects (.ism files) that you can modify and build in InstallShield.
<b>costing</b>	File costing is the process that InstallShield uses to determine the total disc space that a current installation requires.
<b>custom action</b>	An action that is created by an installation author as opposed to a standard action that is built into a Windows installer. The action encapsulates a function performed during the installation, uninstallation, or maintenance of an application.
<b>database</b>	A discrete collection of data in a database management system (DBMS).
<b>database function</b>	A function that operates on a database.
<b>database handle</b>	A quantity that specifies a database when a database function is called.

Table 1 • InstallShield Glossary

Term	Definition
<b>database management system (DBMS)</b>	A set of applications that control the organization, storage, and retrieval of data for many users.
<b>DBMS</b>	See <a href="#">database management system</a> .
<b>DCOM</b>	See <a href="#">distributed component object model</a> .
<b>DCOM file</b>	Software components that are able to communicate across a network. DCOM, previously called network OLE, allows the components for a single application to be distributed across multiple networked computers.
<b>decompress</b>	The reverse process of compression, which minimizes the size of a file by removing its space characters. This process returns the file to its original state.
<b>deferred execution</b>	Execution of an installer action upon execution of the installation script.
<b>dependency</b>	A software object that is required by another software object.
<b>dialog</b>	Windows of information that display to the end user during installation and uninstallation. They enable the end user to interact with the operation by reading or specifying information. See also <a href="#">wizard</a> .
<b>dialog box</b>	A window that displays within an application interface that enables users to enter information or specify commands.
<b>differential release</b>	A release that contains only those files that were absent from one or more of a specified set of existing releases. A differential release is used to update the versions of your product that were installed by those existing releases.
<b>digital signing</b>	To assure end users that the code within your application has not been tampered with or altered since publication, you can digitally sign your application. When you do so, end users are presented with a digital certificate when they download your product.
<b>distributed component object model (DCOM)</b>	An extension of the component object model (COM), a Microsoft-developed software architecture that enables the creation of component-based applications.
<b>distribution media</b>	A CD-ROM or other format of media deployed to users.
<b>DLL</b>	See <a href="#">dynamic link library</a> .
<b>drag</b>	The act of selecting an item and moving it to another location.
<b>dynamic link library (DLL)</b>	A shared, code-base file containing functions that can be called from other applications.

Table 1 • InstallShield Glossary

Term	Definition
<b>edit field object</b>	An interactive object that lets the user enter text into a field.
<b>elevated privileges</b>	Privileges that are higher than standard privileges, and are usually temporarily. Privileges are permissions to perform certain actions on a system.
<b>end user</b>	The person who installs or uninstalls your product.
<b>end user machine</b>	The machine onto which an end user installs or from which uninstalls your product.
<b>engine</b>	A program that performs essential functions and coordinates the overall operation of other programs. Engines work behind the scenes. InstallShield uses the InstallScript engine (ISScript.msi) and the Windows Installer engine to drive installations. InstallShield also has its own proprietary engine called ikernel.
<b>environment variable</b>	A variable that can be accessed by multiple programs on the target system.
<b>EXE media type</b>	All of the installation and uninstallation files that are contained in a single, self-extracting file.
<b>executable (.bin) file</b>	A file that contains a program that can run on UNIX platforms.
<b>executable (.exe) file</b>	A file that contains a program that can run on Windows platforms.
<b>execution phase</b>	The phase during which an installer's actions are executed.
<b>execution script</b>	Installer actions for a Windows Installer installation. The execution script is generated during the acquisition phase of installation and executed during the execution phase.
<b>expand</b>	<p>(1) To restore a compressed file to its original size. A compressed file is a single file that contains one or more other files, for example, a cabinet file. Compressed files are reduced in size, thus, saving space.</p> <p>(2) A DOS command used to restore compressed files. During an installation, missing or corrupted operating system files or InstallShield files may need to be expanded from a compressed file to enable the installation to complete.</p>
<b>extensible markup language (XML)</b>	<p>(1) A programming language that is essentially a simplified version of standard generalized markup language (SGML). It enables developers to create customized tags to organize and deliver content efficiently.</p> <p>(2) The format of the output of MultiPlatform projects.</p> <p>(3) Windows-based projects created in InstallShield can be converted to XML so that they can be saved in source code control software.</p>
<b>extensible stylesheet language (XSL)</b>	A language used to describe how XML information should be presented.

**Table 1** - InstallShield Glossary

Term	Definition
<b>external user interface</b>	The user interface developed by the author of an installation package. It does not use the internal user interface capabilities that are available with the installer.
<b>extract</b>	To remove, or decompress, a file from a compressed file, such as a cabinet file. A compressed file is a single file that contains one or more other files. Compressed files are reduced in size, thus, saving space. To use a file that has been compressed, it must first be “pulled out” of the compressed file. A command-line utility called <code>Extract.exe</code> can be used to extract files. During installation, missing or corrupted operating system files or InstallShield files may need to be extracted from a compressed file to enable the installation to complete.
<b>false positive</b>	A false positive is something that gives the appearance of being true by a test, but in reality is not. Most cases of false positives are found in anti-virus software. For example, anti-virus software may claim that it has found a virus in an InstallShield file, but in fact, this is not the case; their virus definitions need to be updated.
<b>feature</b>	Logical representations of the functionality of the product. For example, an installation could consist of a database, the main application files, and the help system files. Database, Application, and Help System would all be features of the product. Although features are visible to the end user, the actual files that comprise the features are within the components of the features. See also <a href="#">component</a> .
<b>file</b>	An element of data storage in a file system.
<b>file extension</b>	The portion of a file name, following the final point, that indicates the kind of data stored in the file.
<b>InstallShield scripting run time</b>	See <a href="#">IDriver.exe</a> .
<b>formatted</b>	When data has been divided or arranged for storage or display.
<b>full update</b>	An installation that installs an updated version of your product over an earlier version.
<b>full user interface (UI)</b>	One level of the installer’s internal user interface (UI) capabilities. Installation packages that are built with the full UI level can display both the modal and modeless dialogs that have been included in the internal UI.
<b>gallery</b>	A collection of available resources that can be shared.
<b>globally unique identifier (GUID)</b>	A long string of numbers created by InstallShield to uniquely identify your product from others. Enter string GUIDs throughout InstallShield in the following format: {XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX}.
<b>GUI</b>	Graphical user interface.

Table 1 • InstallShield Glossary

Term	Definition
<b>GUID</b>	See <a href="#">globally unique identifier</a> .
<b>hard drive</b>	The primary storage device on a computer. A hard drive contains disks on which data is read from and written to magnetically. The term “hard” differentiates the aluminum or glass disks used in a hard drive from floppy disks, which are made of plastic.
<b>hotfix</b>	A quick, important fix for a bug whose deployment cannot wait until the next release of the application. Most hotfixes are in the form of small patches and can be downloaded from the software vendor’s Web site.
<b>HTML</b>	See <a href="#">hypertext markup language</a> .
<b>hypertext markup language (HTML)</b>	A language used to create Web pages with hyperlinks and markup for text formatting.
<b>IAT</b>	See <a href="#">import address table</a> .
<b>ICE</b>	See <a href="#">Internal Consistency Evaluator</a> .
<b>IDE</b>	See <a href="#">interactive development environment</a> and <a href="#">integrated development environment</a> .
<b>IDriver.exe</b>	The InstallShield scripting run-time engine. It is required on a computer to run some installations created with InstallShield. IDriver.exe is located in one or both of the following common file locations by default: C:\Program Files\Common Files\InstallShield\Driver\7\Intel 32 or C:\Program Files\Common Files\InstallShield\Driver\8\Intel 32. Some installation error messages may reference IDriver.exe.
<b>IE</b>	See <a href="#">Internet Explorer</a> .
<b>ikernel.exe</b>	The InstallShield engine. See also <a href="#">engine</a> .
<b>immediate execution</b>	Installation phase terminology that generally refers to custom actions that are immediately executed when the installer builds the script in an InstallScript project.
<b>import address table (IAT)</b>	The table used to import .dll files or executable files.
<b>indirect build</b>	A full build that creates references to the payload files only. This means that at installation time, the payload must be in the same place where it was at build time. For example, if your payload is on a network server, then the installation looks for the payload on that same network server.

**Table 1** - InstallShield Glossary

Term	Definition
<b>install level</b>	A feature's install level partly determines whether it is selected by default for installation. That value is compared to the Windows Installer property INSTALLLEVEL to determine which features are selected for installation: if a feature's install level property is less than or equal to the value of the INSTALLLEVEL, the feature will be installed.
<b>installation</b>	The transfer of a program and its constituent files, features, and components from source media to a target system. See also <a href="#">installation process</a> .
<b>installation package</b>	One or more files that are used together to install or uninstall an application.
<b>installation process</b>	The entire process of installing the contents of a package or application onto a target computer. The installation process consists of the acquisition phase, the execution phase, and, if the installation attempt is not successful, rollback.
<b>installation project</b>	The entire collection of source files, dialogs, actions, and conditions that make up your installation and uninstallation while it is under construction.
<b>installation sequence</b>	The sequence in which an applications files are installed, acitons are executed, and dialogs display at run time. The installation sequence runs by default when the installation is launched, for example, by double-clicking the installation launcher.
<b>installation type</b>	A predefined group of features from which the end user can select to install or uninstall.
<b>installation-on-demand</b>	A Windows Installer capability that makes it possible to offer functionality to users and applications in the absence of the files themselves.
<b>INSTALLDIR</b>	A system variable that specifies the root destination directory for an installation.
<b>installer</b>	An installation and configuration service on a computer.
<b>installer database</b>	A database that contains all the necessary information for the installation of an application. It consists of many interrelated tables that together comprise a relational database of information necessary to install a group of applications.
<b>installer function</b>	The application programming interface called by an application to obtain installer services.
<b>installer package authoring tool</b>	A third-party tool that lets users create installation packages.
<b>installer properties</b>	Variables that are used during the installation.
<b>INSTALLLEVEL</b>	Initial level at which features are selected "ON" for installation by default.

Table 1 • InstallShield Glossary

Term	Definition
<b>integrated development environment (IDE)</b>	A software program's interface. Also referred to as an <a href="#">interactive development environment</a> .
<b>interactive development environment (IDE)</b>	A software program's interface. Also referred to as an <a href="#">integrated development environment</a> .
<b>interface</b>	The point at which independent systems communicate with each other. The user interface of an application often consists of toolbars, menus, buttons, windows, and other items.
<b>Internal Consistency Evaluator (ICE)</b>	Tests that can be run on a Windows Installer database (using Orca, Msival2, or the InstallShield Premier or InstallShield) to warn about potential (or actual) authoring errors.
<b>internal source files</b>	Files that are included in the installation archive file.
<b>internal user interface</b>	Built-in capabilities of an installer that can be used to create a graphical user interface that is displayed to the end user during installation.
<b>internet Explorer (IE)</b>	The browser developed by Microsoft and distributed with their Windows operating systems.
<b>ISM</b>	See <a href="#">.ism file</a> .
<b>isolated application</b>	An application that has been modified so that it always loads the versions of components, such as .dll files, with which it was originally developed and tested.
<b>ISScript.msi</b>	InstallScript engine installer. ISScript.msi installs the required files to run an installation. The InstallScript engine is also known as the InstallShield Scripting Run Time. InstallScript is a programming language used to create installations.
<b>JAR</b>	Acronym for Java archive file. See also <a href="#">.jar file</a> .
<b>Java Archive</b>	See <a href="#">.jar file</a> .
<b>Java Native Interface (JNI)</b>	A Java specification that enables Java code to call native code in a shared library. Native code in the JNI library can also invoke Java code through JNI.
<b>Java Virtual Machine (JVM)</b>	A simulated computer that interprets Java programs compiled into bytecode. The Java programs are usually stored in .class files.
<b>JNI</b>	See <a href="#">Java Native Interface</a> .
<b>JPEG</b>	See <a href="#">.jpg file</a> .

**Table 1** • InstallShield Glossary

Term	Definition
<b>JVM</b>	See <a href="#">Java Virtual Machine</a> .
<b>KB</b>	See <a href="#">knowledge base</a> .
<b>key file</b>	A unique file for each component that Windows Installer uses to detect the component's presence. In order to create advanced component settings or shortcuts, a key file must be specified.
<b>key path</b>	A unique registry value for each component that Windows Installer uses to detect the component's presence. A component can have either a key file or a key path, but not both.
<b>knowledge base (KB)</b>	A collection of technical information, instructions, and articles that are beyond the scope of the software's help information. The Knowledge Base features tips, tricks, and techniques, answers to Frequently Asked Questions, and articles on both technical and design issues. Revenera posts periodic updates to the Knowledge Base Articles on its <a href="http://www.installshield.com">Web site (http://www.installshield.com)</a> .
<b>left-click</b>	The act of selecting the left button on a mouse.
<b>library</b>	A collection of similar objects that are stored for occasional use, such as programs in source code or object code form, data files, scripts, and templates. A program library is a collection of (usually) precompiled, reusable programming routines that a programmer can "call" when writing code.
<b>load-ordering group</b>	One service may require another service to already be running before it starts. For this reason, services need to be grouped and set to load in a specific order. Service load-ordering groups are listed under HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\ServiceGroupOrder. The service's Start Type property determines when it loads within its group.
<b>localization</b>	The process of adapting a product or service to a particular language and culture.
<b>log database (LogDB)</b>	A database that is on the target machine and contains a log of everything that was configured to be logged during installation and uninstallation.
<b>log file</b>	File containing a record of the activity that occurred during a software process (such as an installation, a build, a download) on a computer workstation or Web server. For example, Web servers maintain log files listing every request made to the server, summarizing files that were copied; bytes that were transferred; or which pages, images, and files are requested. A build log file lists all features, setup types, merge modules, dynamic links, and files included in the build.
<b>LogDB</b>	See <a href="#">log database</a> .

Table 1 • InstallShield Glossary

Term	Definition
<b>logging</b>	The process of recording the activity of a software process (such as an installation, a build, or a download) in a log file.
<b>macro</b>	An instruction that represents a sequence of instructions.
<b>maintenance mode</b>	When a user runs an installation program a second (or later) time for a product already installed on their system, the installation runs in maintenance mode. Maintenance mode enables the user to modify feature selections from the first-time installation, repair the features already installed, or remove the entire program.
<b>major upgrade</b>	A comprehensive update of the product that warrants a change in the ProductCode property. A new product code is required if you want to have two versions of a product installed on the same machine.
<b>managed application</b>	An application is called a “managed application” if elevated (system) privileges are used to install the application.
<b>MD</b>	See <a href="#">media descriptor</a> .
<b>media descriptor (MD)</b>	The semantics of an installable unit (IU). It provides a mapping of the elements in the deployment descriptor (DD) to some physical source for the data, which is usually files.
<b>merge module (MM)</b>	A package containing all of the logic and files needed to install distinct pieces of functionality such as run-time .dll files and virtual machines. Merge modules are built once and can be added to any installation project.
<b>metafile</b>	An image saved using the standard Windows metafile format. A metafile is a set of drawing instructions. Windows metafiles have a .wmf file extension.
<b>MFC</b>	See <a href="#">Microsoft Foundation Classes</a> .
<b>Microsoft Data Engine (MSDE)</b>	A fully SQL Server–compatible data engine for building desktop and shared solutions. It provides an easy migration path to SQL Server 7.0. Solutions built with MSDE can be migrated to full SQL Server 7.0 without requiring a change in a single line of code.
<b>Microsoft Developer Network (MSDN)</b>	A set of online and offline services designed to help developers write applications using Microsoft products and technologies.
<b>Microsoft disc operating system (MS-DOS)</b>	The first operating system created by Microsoft. MS-DOS is the underlying operating system of Windows 95, 98, and ME. Windows NT, 2000, and XP operating systems support existing DOS applications.
<b>Microsoft Foundation Classes (MFC)</b>	A huge set of C++ classes that developers can use to write Win32 applications. To run an application that uses MFC, the MFC engine has to be installed on a target system.
<b>MIDI</b>	See <a href="#">musical instrument digital interface</a> .

**Table 1** - InstallShield Glossary

Term	Definition
<b>migrating</b>	The process of moving from the use of one operating environment to another that is, in most cases, thought to be a better one. For example, moving from Windows NT Server to Windows 2000 Server would be considered a migration because it involves ensuring that new features are exploited and that old settings do not require changing; it also involves taking steps to ensure that current applications continue to work in the new environment. Migration could also mean moving from Windows NT to a UNIX-based operating system (or the reverse). You can also migrate data from one kind of database to another kind of database. This usually requires converting the data into some common format that can be output from the old database and input into the new database. Migration is also used to refer simply to the process of moving data from one storage device to another.
<b>MIME</b>	See <a href="#">multipurpose internet mail extensions</a> .
<b>minor upgrade</b>	An update to a product in which the changes made to the installation do not warrant a change in the Product Code.
<b>MM</b>	See <a href="#">merge module</a> .
<b>modal</b>	Requires the user to interact with it before the application can continue, restricting the user's activities with other windows or dialog boxes. See also <a href="#">modeless</a> .
<b>modeless</b>	Enables the user to interact with other windows and dialog boxes. See also <a href="#">modal</a> .
<b>MSDE</b>	See <a href="#">Microsoft Data Engine</a> .
<b>MSDE named instance</b>	A named instance of an installation of the Microsoft data engine (MSDE). See also <a href="#">named instance</a> .
<b>MSDE object template</b>	A base for the MSDE merge module. When you add the MSDE merge module to a Windows Installer project or an InstallScript project, the InstallShield application starts with a base file (or stub) for this merge module. You need to configure this merge module, and then the application can apply your settings to the base file.
<b>MSDN</b>	See <a href="#">Microsoft Developer Network</a> .
<b>MS-DOS</b>	See <a href="#">Microsoft disc operating system</a> .
<b>MS-DOS prompt</b>	The Microsoft Disc-Operating System (MS-DOS) prompt is the visual indicator in the Command Prompt window signaling that MS-DOS is ready to accept a new command. The default MS-DOS prompt is C: >, followed by a blinking cursor.
<b>MSI</b>	See <a href="#">.msi file</a> .
<b>MSM</b>	See <a href="#">.msm file</a> .
<b>MSP</b>	See <a href="#">.msp file</a> .

Table 1 • InstallShield Glossary

Term	Definition
<b>MST</b>	See <a href="#">.mst file</a> .
<b>multimedia</b>	A collection of various media such as sound, video, graphics, and animation used together to convey a message.
<b>multipurpose Internet mail extensions (MIME)</b>	The standard used by Web servers to identify the files that they are sending to Web clients. The MIME standard is a way of specifying both the type of file being sent and the method that should be used to turn it back into its original form.
<b>musical instrument digital interface (MIDI)</b>	A protocol designed for recording and playing back music on digital synthesizers. Unlike .wav files, which are digital recordings of actual sound (voice or music), MIDI files simply define the instruments and notes that are to be played, and how they should be played. A synthesizer (generally part of a MIDI-capable sound board) on the end-user's system reads the MIDI instructions and plays the music. Since MIDI files contain only instructions and not the actual music, they are many times smaller than digital audio files of the same duration. MIDI files also use less processor power to play.
<b>named instance</b>	An instance is a complete and independent installation of SQL Server on a given server. One default instance and any number (up to 16) of named instances can be installed on a single server. Apart from the management tools and client connectivity components that are shared between instances, each instance is effectively standalone. Each instance has its own security, can be started and stopped independently, and can even be service packed independently of other instances on the same server.
<b>nested installation</b>	A type of custom action that installs or removes another installation package (sometimes called the child product) from within a running installation (called the parent product).
<b>network</b>	A network is two or more computers connected together to share hardware, software, and information. During installation, it may be necessary to move installation files that are on a network to your computer's hard drive to install the software properly.
<b>NT service</b>	An application that is installed on Windows NT to run as a service, meaning that once it is installed, execution is automatic and transparent to any user, and a user does not have to log in for the service to start. NT manages services that are defined and described in the registry.
<b>object</b>	A package containing all of the logic and files needed to install distinct pieces of functionality.
<b>One Really Cool Application (ORCA)</b>	An external tool for editing Windows Installer files.

Table 1 • InstallShield Glossary

Term	Definition
<b>One-Click Install</b>	With a One-Click Install installation, the end user can download an application with minimal effort and can begin using the application immediately. The installation is automatically downloaded, uncompressed, and then executed automatically, with minimal user input. End users are not asked to specify a download location, and they are not required to manually launch the installation.
<b>operating system (OS)</b>	The software that controls the operation of a computer and directs the processing of programs by assigning storage space in memory and controlling input and output functions.
<b>ORCA</b>	See <a href="#">One Really Cool Application</a> .
<b>OS</b>	See <a href="#">operating system</a> .
<b>package</b>	All of the files needed to run an installation, including the installation database file, your application's files (separate from the installation database file or compressed into it), and an executable file (which may have all of the above files compressed inside it).
<b>package code</b>	The globally unique identifier for an installation package. See also <a href="#">globally unique identifier (GUID)</a> .
<b>panel</b>	A window within a wizard that contains one or more related settings that an end user can configure. See also <a href="#">wizard</a> .
<b>parent/child installation</b>	See <a href="#">nested installation</a> .
<b>patch</b>	A special type of installation package that contains just the bits and portions of the application that is necessary to either update the application's files and installation to a specific version or to fix a bug in an earlier version.
<b>patch file</b>	A patch package used for patching. A patch package (.msp) file contains the transforms and instructions necessary for upgrading one or more installed versions of a product. Windows Installer uses a patch package to patch local or administrative installations. A patch package does not include a database like a regular installation package. Instead it contains at minimum one database transform that adds patching information to the database of its target installation package. The installer uses this information to apply the patch files that are stored in the cabinet file stream of the patch package.
<b>patching</b>	The method of updating an installation that replaces only the bits being changed rather than the entire application. This means that end users can download a patch for a product that is much smaller than the entire product.

Table 1 • InstallShield Glossary

Term	Definition
<b>path</b>	In a computer operating system, a path is the route through a file system to a particular file. A path name is the specification of that path. Each operating system has its own format for specifying a path name. The DOS, Windows, and OS/2 operating systems use the following format: driveletter:directorynamesubdirectorynamefilename.suffix. UNIX-based systems use the following format: /directory/subdirectory/filename.
<b>path variable</b>	A variable that represents a location that can be defined once in a central location so that it is not necessary to change every source file's path each time that the project is moved or the folder structure is changed. You can instead use path variables to define commonly used paths once, and they are used during the development of your installation project. These paths do not apply to the target machines where the application is being installed. Rather, they are used to link to source files that need to be included in your installation project. When the project is built, those links are evaluated and the files they point to are built into the installation package.
<b>PKCS</b>	See <a href="#">public-key cryptography standards</a> .
<b>platform</b>	The operating system for which the installation program is intended. An installation technology may be limited to creating installations for a specific platform(s).
<b>preview mode</b>	Mode for viewing the design of the user interface, or the current appearance of dialog and billboards. <i>Preview mode</i> is a term used in Windows Installer.
<b>product</b>	The actual application to be installed or uninstalled.
<b>product code</b>	A string that uniquely identifies a product.
<b>progress bar</b>	The visual indication of the progress of an executable file.
<b>property</b>	A value that has been placed on an object within an installation project that is used during installation or uninstallation by the installer or uninstaller.
<b>public property</b>	A global variable whose value is set by the end user or system administrator. A public property can be set or changed during installation through interaction with the user interface as well as by setting the property on the command line, by applying a transform, or by using a standard or custom action. Unlike private property values, the values of public properties can be changed. Public property names cannot contain lowercase letters.
<b>public-key cryptography standards (PKCS)</b>	Developed by RSA Security, Inc., these specifications standardize aspects of public-key cryptography that are not covered by existing standards bodies.

**Table 1** - InstallShield Glossary

Term	Definition
<b>publishing</b>	A type of advertising (“just-in-time” installation) in which no user-interface elements are created for the component during installation, but the component can still be installed through Add and Remove Programs of the Control Panel or when an installed component requests the published component from the installer.
<b>qualified component</b>	A method of single-level indirection that is similar to a pointer. Qualified components are primarily used to group components with parallel functionality into categories.
<b>QuickPatch</b>	A special type of patch package that contains just the bits and portions of the database necessary to update your application’s files and installation to a specific version. You can create a QuickPatch in InstallShield by using the QuickPatch type of project.
<b>readme file</b>	A text file that is included with the distribution of an application that contains important information. This information often pertains to the installation, uninstallation, or functionality that may not have been included in other product documentation.
<b>red green blue (RGB)</b>	The three colors of light that can be mixed to produce any other color. Colored images are often stored as a sequence of RGB triplets or as separate red, green, and blue overlays, though these are not the only possible representations. These three colors correspond to the three “guns” in a color cathode ray tube (CRT) and to the color receptors in the human eye.
<b>redistributable</b>	A merge module, object, or other file that may be legally distributed with an installation or application.
<b>reduced user interface (UI)</b>	The reduced UI level displays authored modeless dialogs, built-in modal error messages, and disc-prompt messages during installation. This UI level does not display any authored modal dialogs. This UI level uses the installer’s internal user interface capabilities. See also <a href="#">modal</a> , <a href="#">modeless</a> , and <a href="#">internal user interface</a> .
<b>reference count</b>	A tally that is incremented each time a shared file is installed. It is maintained under HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\SharedDLLs.
<b>refresh build</b>	This type of build only recompiles custom code. It can also perform single file replacement, meaning it can only rebuild and add or modify a single changed file without rebuilding the entire installation. This type of build is available for InstallScript projects only.

Table 1 • InstallShield Glossary

Term	Definition
<b>Regedt32.exe, Regedit.exe</b>	The two versions of the Windows Registry Editor. The Registry Editor enables you to edit the entries in the registry. Regedt32 provides more functionality for editing the registry. If errors occur during installation, you may need to edit the registry to complete installation. Regedt32.exe and Regedit.exe have been merged in Windows XP computers, thus these two applications perform the same functionality in the new operating systems.
<b>registry</b>	A central database used by the Windows operating system to track the personal settings and the software and hardware installed on a computer. During installation, installation choices are written to the registry.
<b>registry file</b>	A text file of a predefined format that contains keys and values that can be merged into a registry.
<b>reinstallation</b>	When a product has been installed on a machine and its installation is run again, the installation reinstalls the product by overwriting its existing files, shortcuts, and registry entries.
<b>relative path</b>	A path that includes all of the information necessary to locate a file by starting at the current folder on the current drive, for example, InstallShield\Support. That folder can be located along that relative path only if it exists in the current directory.
<b>release build</b>	A full rebuild fit for releasing.
<b>release notes</b>	A file that is included with the distribution of an application. This file contains important information about the installation and uninstallation of the application. It can also contain information that may not have been included in other product documentation.
<b>remote procedure call (RPC) stub</b>	A small routine placed in a program that is used to request a service on another computer. RPC is a protocol, or agreed-upon format for transmitting data, that allows a program to request a service from a program located in another computer. The stub accepts the request from the program and forwards it to the remote procedure. When the procedure is complete, the stub receives the result and passes it back to the program that made the request.
<b>repair mode</b>	In repair mode, the installation checks for any type of corruption, such as missing or damaged files, incorrect registry entries, and self-registering files. If the installation detects any corruption, it attempts to repair the problem. See also <a href="#">maintenance mode</a> .
<b>resiliency</b>	The ability for the application to reinstall components as necessary. If a component is accidentally deleted or corrupted, Windows Installer technology enables the application to essentially repair itself.

Table 1 • InstallShield Glossary

Term	Definition
<b>restricted public property</b>	A global variable for which the installation author can limit the ability to set or change it. Usually, only system administrators can manipulate restricted public properties. Restrictions are used to maintain a secure environment.
<b>result set</b>	The set of rows created by executing a <b>SELECT</b> statement.
<b>RGB</b>	See <a href="#">red green blue</a> .
<b>rich text format (RTF)</b>	A Microsoft file format that contains special commands to indicate formatting information such as fonts and margins. RTF lets you exchange files between different word processors and operating systems.
<b>rollback</b>	The installation keeps track of all changes that are made during the installation process so that, if an error occurs and the installation is aborted, the changes will be “rolled back,” that is, the machine will be restored to its original state.
<b>row</b>	A set of related columns that describe a specific entity, also known as a <i>record</i> .
<b>RPC stub</b>	See <a href="#">remote procedure call stub</a> .
<b>RTF</b>	See <a href="#">rich text format</a> .
<b>run time</b>	The time during which the installation interacts with the installer to install or uninstall your application on the target machine.
<b>safe mode</b>	Safe mode is a troubleshooting mode available in Windows 95, 98, ME, and 2000. When you start your computer in safe mode, only the operating system and mouse, keyboard, and display drivers are loaded. You may be able to start your computer in safe mode when it otherwise would not start at all. Safe mode lets you troubleshoot the operating system to determine what is not functioning properly.
<b>schema</b>	A description of the current structure of tables and views in a data source. The schema describes what columns are in each table, the data type of each column, and the relationships between tables.
<b>SCM</b>	See <a href="#">Service Control Manager</a> .
<b>SDK</b>	See <a href="#">Software Development Kit</a> .

Table 1 • InstallShield Glossary

Term	Definition
<b>Section 508</b>	A United States law that amended the Rehabilitation Act to require federal agencies to make their electronic and information technology accessible to people with disabilities. Section 508 was enacted to eliminate barriers in information technology, to make available new opportunities for people with disabilities, and to encourage development of technologies that will help achieve these goals. The law applies to all federal agencies when they develop, procure, maintain, or use electronic and information technology. Under Section 508, agencies must give disabled employees and members of the public access to information that is comparable to the access available to others.
<b>security tool</b>	A privacy tool that detects and eliminates destructive pests, such as Trojans, spyware, addware, and hacker tools on your computer. It complements anti-virus and firewall software, extending protection against non-viral malicious software that can evade the end user's existing security and invade privacy.
<b>self-healing</b>	See <a href="#">auto-repair</a> .
<b>self-registering file</b>	A file that can enter information about itself in the Windows registry and remove that information upon uninstallation. Other types of files can be used without entering information into the registry. The installation of a self-registering file consists of installing the file to its desired location and then registering the file on your computer.
<b>sequence</b>	A collection of actions and dialogs that is executed sequentially in an installation project.
<b>sequence tables</b>	Tables that list the actions that control the installation process and specify their order of execution.
<b>service</b>	For Windows Installer-based or InstallScript-based projects, this is a program that runs in the background whenever a computer is running. Services perform tasks that do not require user interaction, such as software installation, process monitoring, file transfer, task scheduling, network management, and many more. In Win32, services are managed by the Service Control Manager.
<b>Service Control Manager (SCM)</b>	Maintains the system's database of services and exposes an interface for controlling these services.
<b>service pack (SP)</b>	An update to a software product that fixes existing problems and may provide product enhancements. The next version of a product incorporates all services packs previously released.
<b>setup</b>	See <a href="#">installation</a> .
<b>setup project</b>	See <a href="#">installation project</a> .
<b>Setup.inx</b>	The compiled script file. It is the object code that the installer engine executes.

Table 1 • InstallShield Glossary

Term	Definition
<b>shortcut</b>	A file that points to an application. Clicking the shortcut is a fast way to open the application. Shortcuts are usually placed on the desktop or on the Start menu. See also <a href="#">advertised shortcut</a> .
<b>silent installation</b>	An installation that is run without a user interface or any end user intervention.
<b>small update</b>	A patch that upgrades a package where both the installed package and the most recent one have the same version number.
<b>software development kit (SDK)</b>	The documentation, samples, command-line compilers, debugging aids, utilities, and tools designed to enable developers to create applications and libraries that target a specific operating system. SDKs are usually provided by the manufacturer of the operating system.
<b>source list</b>	A list that specifies the locations where the installer searches for installation files. The entries in the source list can be network locations, URLs, or compact disks.
<b>SP</b>	See <a href="#">service pack</a> .
<b>splash screen</b>	An image that is displayed to end users during the startup of a product installation. You can specify the image to be displayed, the length of time that it should display, and whether it contains localized images.
<b>spyware</b>	Any technology that aids in gathering information about a person or organization without their knowledge. On the Internet, spyware is programming that is put on someone's computer to secretly gather information about the user and relay it to advertisers or other interested parties. Spyware can be loaded on a computer as a software virus or as the result of installing a new program. Data collecting programs that are installed with the user's knowledge are not, properly speaking, spyware, if the user fully understands what data is being collected and with whom it is being shared.
<b>SQL</b>	See <a href="#">Structured Query Language</a> .
<b>SQL statement</b>	A complete phrase in SQL that begins with a keyword and completely describes an action to be taken. For example, <b>SELECT * FROM Orders</b> .
<b>standard action</b>	An action that is built into an installation development software product. InstallShield products also support the creation and use of custom actions. See also <a href="#">action</a> , <a href="#">custom action</a> .
<b>string table</b>	A database that maintains the string IDs, values, and comments for all supported languages. These strings are used in dialogs and message boxes displayed to the end user at run time.

Table 1 • InstallShield Glossary

Term	Definition
<b>Structured Query Language (SQL)</b>	A language used to work with databases.
<b>summary information stream</b>	The properties such as title, author, package code, templates, summary, and schema that are defined for a Windows Installer package and are used by the installer to install the application.
<b>synchronous execution</b>	The opposite of asynchronous execution, where control of the process is not released until the entire process has completed.
<b>system policy</b>	The rules and regulations by which a system must abide.
<b>system privileges</b>	The system, programs, and functions available to each user.
<b>table</b>	A collection of rows of data.
<b>TARGETDIR</b>	In a Windows Installer–based installation, the TARGETDIR property specifies the root destination directory for the installation. In an InstallScript installation, the TARGETDIR system variable, by default, specifies the root destination directory for the installation.
<b>Task Manager</b>	A tool available on Windows platforms that provides information about the applications and processes running on your computer as well as your computer's performance. Prior to installation, you may need to use the Task Manager to end running applications and processes to prevent conflicts.
<b>temp directory</b>	A folder on your hard drive where the operating system or applications can temporarily store files while they are in use. When the application exits, the temporary files are deleted. It may be necessary to manually clean, or delete files from, the temp directory.
<b>template</b>	Something that establishes or serves as a pattern.
<b>transform</b>	A transform (.mst) file represents the differences between two installation databases. For example, network administrators may want to distribute different configurations of a product to the various departments in the company. As a result, you can create a transform for every configuration of the product, then apply the appropriate transform as needed.
<b>transform error condition flags</b>	A set of properties that are used to set the error conditions in a transform.
<b>transform validation flags</b>	The set of properties used to verify that a transform can be applied to the Windows Installer package.
<b>tree node</b>	A data structure that contains zero or more “child” nodes. Nodes are tree “roots”. Tree nodes that do not have “children” are typically referred to as “leaves”.

Table 1 • InstallShield Glossary

Term	Definition
<b>trees</b>	Data that is structured like a tree.
<b>UI</b>	See <a href="#">user interface</a> .
<b>uncompress</b>	See <a href="#">decompress</a> .
<b>uniform/universal resource locator (URL)</b>	Represents the location of a Web site or page.
<b>uninstallation</b>	The undoing of an installation. Uninstallation is the installation maintenance option that enables the end user to remove the product files and reverse any changes that were made to the machine made during installation.
<b>uninstallation log file</b>	A record of all uninstallation-related events that occurred during an installation. The log file is initialized at the beginning of the installation. If this log file becomes corrupted, it may result in an error during uninstallation.
<b>unInstallShield</b>	A component included in the Setup Wizard that uninstalls the product from the end user's PC.
<b>unspanned CD/DVD media type</b>	The payload is laid out in a CD/DVD archive, but no spanning across multiple media is used.
<b>Update Manager (Windows or Java)</b>	An optional Win32 or Java-based client application that can be used by end users to set their own update schedules, or to silence the update queries performed by the agent.
<b>upgrade</b>	A move from a lesser version of an application to a newer, usually improved version of an application.
<b>upgrade code</b>	The code required to install a newer version of existing software.
<b>upgrading</b>	The process of installing a newer version of existing software.
<b>URL</b>	See <a href="#">uniform/universal resource locator</a> .
<b>user interface (UI)</b>	The user's access to the software.
<b>user profile</b>	Record of an individual end user's settings, such as shortcuts, favorites, and settings for application, display, and hardware. User profiles enable multiple users to share a single computer while maintaining their own preferences.
<b>validation</b>	The process of validating, that is, to confirm the true form of data.
<b>value pack (VP)</b>	An installation that upgrades the features and functions of an installed application.

Table 1 • InstallShield Glossary

Term	Definition
<b>variable</b>	A value stored in the computer. Its value can be composed of any printable characters, numeric or text. Unlike a constant, whose value never changes, a variable's value can be changed at any time.
<b>volume</b>	The total amount of space, in blocks, on one piece of media.
<b>VP</b>	See <a href="#">value pack</a> .
<b>Web installation</b>	An installation that end users can access and run from a Web site.
<b>Web site</b>	A location on the World Wide Web.
<b>WinDir</b>	Stores the path to the executable file for Win16 on Win32 (WOW).
<b>window</b>	The area in which an open application appears on a screen.
<b>Windows API</b>	The Windows application programming interface (API), which provides the building blocks that are used by applications written for the Windows platform. Each API is a specific method prescribed by a computer operating system or by an application program. A programmer writing an application can make requests of the operating system or another application with the use of a Windows API. Each API has different system requirements to run properly.
<b>Windows installation CD</b>	The compact disc that contains the Windows operating system. If your computer manufacturer installed the operating system on your computer, the installation CD should have been included with your computer documentation. If you installed the Windows operating system on your computer, you used the installation CD to do so.
<b>Windows Installer</b>	<p>(1) An installation and configuration service. It is based on a data-driven model and provides all installation data and instructions in a single, complete package. In the data-driven installation model, a primary set of installation tables is created where every application resource (files, registry keys, and so on) is clearly tied to the component or feature it supports. The user selects the objects to install and where to install them, and the Windows Installer manages the procedural instructions.</p> <p>(2) Refers to the service, properties, and tables of an .msi package.</p>
<b>Windows Installer service</b>	An operating system component that centrally manages application installation configuration and application uninstallation.
<b>Windows NT service</b>	See <a href="#">Windows service</a> .
<b>Windows service</b>	Long-running executable applications that run in their own Windows sessions. For example, writing messages to an event log.

**Table 1** - InstallShield Glossary

Term	Definition
<b>Windows system folder</b>	Contains core operating system files, which are necessary to keep the computer running properly. Errors occurring during installation may be a result of missing or corrupt files contained in the System folder.
<b>wizard</b>	<p>(1) A program utility that works as an interactive guide by walking the user step-by-step through an unfamiliar task.</p> <p>(2) The InstallShield Wizard is the wizard that displays during the run time of an installation or uninstallation. It presents the end user with a flexible, predefined series of dialogs that walk them through the installation or uninstallation process.</p>
<b>wizard dialog</b>	Dialogs that display to the end user during installation and uninstallation. They enable end users to interact with the operation by reading or specifying information.
<b>wizard interface</b>	Used by the end user to interact with a wizard at run time.
<b>WYSIWYG</b>	What you see is what you get.
<b>XCopyFile</b>	An InstallScript function that copies one or more files and subdirectories to a target directory, creating subdirectories on the target machine, if necessary.
<b>XML</b>	See <a href="#">extensible markup language</a> .
<b>XSL</b>	See <a href="#">extensible stylesheet language</a> .
